IMPORTANT INFORMATION, PLEASE READ CAREFULLY

Unless specified above all doors will come with a standard threshold.

The hinge colour shown on this contract may change without notice due to product availability/restrictions.

Products marked with an * come with an extended lead time and therefore the order will take longer than normal.

If you have ordered Aluminium Windows, Please be advised that the colour Brown is RAL 8017, Black is RAL 9005, Grey is RAL 7016, White is RAL 9910.

Designs shown are viewed Externally. Images and colours are for illustrative purposes only and may not be an exact match for installed products

TRICKLE VENTS: The changes to Approved Document F mean the majority of windows and doors will be required to be fitted with trickle vents. Britelite will be installing trickle vents where required on this contract in order to comply with Document F, Illustrations sometimes do not show trickle vents but trickle vents will be installed when required to comply with this regulation. Trickle vents allow increased airflow in to your property but please also note that trickle vents do allow sound to pass through them so you may experience an increase in noise if you previously did not have trickle vents on the windows we are replacing. Acoustic Trickle Vents are available at an additional cost if you require these but must be ordered at the time of the contract so if you are expecting these please ensure they are shown above.

All Solidor and Luxe Timber Core doors come with a colour coded weather bar to match the door colour, If a different colour is shown this will be changed at point of processing this order.

If you have purchased a Luxe Timber Core Door with a colour frame on both sides then please be advised the substrate will be White.
