The tree to the rear of the site is a self seeded mature common oak with a crown spread into the land of number 41 of approximately 5m. At 1m above ground level the girth is 2m reducing.

The overhanging branches are at least twice the height of the proposed shed so there will be no disturbance of the tree during the works. The trunk is behind a fence in the park.

The area to the left of the existing shed is a patio with slate chippings in front of the existing shed which itself is situated on eco piles screwed into the earth.

The proposed shed will be built off a timber base supported on micro piles which will be augered in by hand. Any tree roots found will enable piles to be withdrawn and moved to avoid these. Pile location not critical to design.

Existing playhouse about 15 years old on timber piled base

All works by hand and no mechanical excavation or other works will be needed.

No pruning of the tree is needed.

It is therefore believed that the minimal ground intrusion) will not disturb the tree in any way.

The shed will be set 1000mm off the rear boundary and 1000mm at its widest to the neighbour. The rear boundary is parkland with dense shrubbery. The neighbours land is overgrown shrubbery.
