

## Proposed materials

As the elevations in this space are to be built as new elements, the materiality is intended to be a combination of the existing and the proposed.

1. Brick piers to match the proportions of the existing.
2. Soldier course banding.
3. Green metal panels.
4. Bronze cladding panels to match window frames.

The residential entrances are designed as projecting elements which allow clear legibility as one approaches the space. Glazed doors and windows allow light into the circulation and lobby spaces.

The proportions of the new windows and cladding in this space are to align with the existing facade organisation.

Existing curtain wall to be replaced with solid cladding
