## Introduction

The following calculations are in justification of the posts, baseplates and foundations required for a new sign.

Refer to all drawings and details.

## LOADS

### Wind loads

Post Code UB3 4QR  
Grid Reference 510256E, 179158N  
Altitude approx. 32.0maOD

Wind load;  $q = 0.506 \text{ kN/m}^2$ ;

Rectangular Sign with 2 legs

Sign Dimensions;

Width;  $b1 = 1.40 \text{ m}$ ;

Depth;  $d1 = 6.10 \text{ m}$ ;

$b1/d1 = 0.230$ ;  $< 1$

Sign wind loading coefficient;  $cf = 1.8$

Design wind load;  $P = q \times cf = 0.911 \text{ kN/m}^2$ ;

Deflection limits; 1 in 100 for 50yr wind

; 1 in 150 for 1yr wind

## SIGN

Sign Area;  $Ae = b1 \times d1 = 8.540 \text{ m}^2$ ;

Number of posts;  $N1 = 4$

Wind Load per post;  $Wf1 = P \times b1 / 4 = 0.319 \text{ kN/m}$ ;

### Steel

### Concrete

Slab/Mat Design

Slab/Mat Design Summary

Static & RSA

No entity matches the filter for the current report item.

Deflection in columns is  $h/300$ ;

$D_{lim} = 6100\text{mm} / 300\text{mm} = 20.333\text{mm}$

Design Deflection:

$D_{des} = 18.6\text{mm} < 20.333\text{mm}$ , therefore satisfactory

The posts are tied together with a minimum of 3 levels of No 100x100x5.0SHS S355 using 6mm fillet weld cross members fully welded to the face of the posts. By inspection these will be satisfactory.

Wind load in y-dir;  $F_{Wy3} = 2.3$  kN

Wind axial load;  $F_{Wz3} = -21.4$  kN

#### Column no.4 loads

Permanent axial load;  $F_{Gz4} = 1.3$  kN;

Wind load in y-dir;  $F_{Wy4} = 2.3$  kN

Wind axial load;  $F_{Wz4} = 21.4$  kN

#### Design approach 1

##### Partial factors on actions - Combination1

Partial factor set; A1

Permanent action;  $\gamma_G = 1.35$ ;

Variable action;  $\gamma_Q = 1.50$

**Partial factors for soil parameters - Combination1**

Soil factor set; M1

Angle of shearing resistance;  $\gamma_\psi = 1.00$ ;

Undrained cohesion;  $\gamma_{cu} = 1.00$

**Partial factors for spread foundations - Combination1**

Resistance factor set; R1

Bearing;  $\gamma_{R,v} = 1.00$ ;

Sliding;  $\gamma_{R,h} = 1.00$

**Bearing resistance (Section 6.5.2)**

#### Forces on foundation

Force in y-direction;  $F_{dy} = 13.8$  kN;

Force in z-direction;  $F_{dz} = 169.2$  kN

#### Moments on foundation

Moment in x-direction;  $M_{dx} = 186.2$  kNm;

Moment in y-direction;  $M_{dy} = 178.4$  kNm

#### Eccentricity of base reaction

Eccentricity in x-direction;  $e_x = 0$  mm;

Eccentricity in y-direction;  $e_y = -46$  mm

#### Effective area of base

Effective length;  $L'_x = 2200$  mm;

Effective width;  $L'_y = 2108$  mm

Effective area;  $A' = 4.638$  m<sup>2</sup>

#### Pad base pressure

Design base pressure;  $f_{dz} = 36.5$  kN/m<sup>2</sup>

#### Net ultimate bearing capacity under undrained conditions (Annex D.3)

Net ultimate bearing capacity;  $n_f = 67.1$  kN/m<sup>2</sup>

Library item: Undrained bearing summary

**PASS - Ultimate bearing capacity exceeds design base pressure**

#### Sliding resistance (Section 6.5.3)

##### Forces on foundation

Force in y-direction;  $F_{dy} = 13.8$  kN;

Force in z-direction;  $F_{dz} = 13.6$  kN

##### Sliding resistance verification (Section 6.5.3)

Horizontal force on foundation;  $H = 13.8$  kN;

Sliding resistance;  $R_{H,d} = 48.4$  kN

$H / R_{H,d} = 0.285$

**PASS - Foundation is not subject to failure by sliding**

Library item: Check sliding summary

#### Design approach 1

##### Partial factors on actions - Combination2

Partial factor set; A2

#### Forces on foundation

Force in y-direction;  $F_{dy} = 12.0$  kN; Force in z-direction;  $F_{dz} = 133.4$  kN

#### Moments on foundation

Moment in x-direction;  $M_{dx} = 146.8$  kNm; Moment in y-direction;  $M_{dy} = 140.1$  kNm

#### Eccentricity of base reaction

Eccentricity in x-direction;  $e_x = 0$  mm; Eccentricity in y-direction;  $e_y = -50$  mm

#### Effective area of base

Effective length;  $L'_x = 2200$  mm; Effective width;  $L'_y = 2099$  mm  
Effective area;  $A' = 4.618$  m<sup>2</sup>

#### Pad base pressure

Design base pressure;  $f_{dz} = 28.9$  kN/m<sup>2</sup>

#### Net ultimate bearing capacity under undrained conditions (Annex D.3)

Net ultimate bearing capacity;  $n_f = 50.1$  kN/m<sup>2</sup>

Library item: Undrained bearing summary

**PASS - Ultimate bearing capacity exceeds design base pressure**

#### Sliding resistance (Section 6.5.3)

##### Forces on foundation

Force in y-direction;  $F_{dy} = 12.0$  kN; Force in z-direction;  $F_{dz} = 22.2$  kN

##### Sliding resistance verification (Section 6.5.3)

Horizontal force on foundation;  $H = 12.0$  kN; Sliding resistance;  $R_{H,d} = 34.6$  kN  
 $H / R_{H,d} = 0.346$

**PASS - Foundation is not subject to failure by sliding**

Library item: Check sliding summary

#### Partial factors for uplift limit state - Table A.NA.15

Permanent unfavourable action;  $\gamma_{G,dst} = 1.10$ ; Permanent favourable action;  $\gamma_{G,stb} = 0.90$   
Variable favourable action;  $\gamma_{Q,dst} = 1.50$

#### Uplift limit state verification

Vertical force;  $F_{dz,u} = 5.8$  kN

**PASS - Foundation is not subject to failure by uplift**

### FOUNDATION DESIGN

In accordance with EN1992-1-1:2004 + A1:2014 incorporating corrigenda January 2008, November 2010 and January 2014 and the UK National Annex incorporating National Amendment No.1 and No.2

Tedds calculation version 3.3.05

#### Concrete details (Table 3.1 - Strength and deformation characteristics for concrete)

Concrete strength class; C28/35; Char.comp.cylinder strength;  $f_{ck} = 28$  N/mm<sup>2</sup>  
Partial factor for concrete;  $\gamma_c = 1.50$ ; Maximum aggregate size;  $h_{agg} = 20$  mm

### Shear

Item	Value	Units	Remarks
Shear Transfer to Concrete			
Shear force, F	3.5	kN	
Bearing strength (base plate), $P_b$	66.0	kN	
Bearing capacity (concrete)	5.1	kN	
Shear capacity (bolt)	58.9	kN	
Number of bolts in tension, $n_g$	4		
Individual bolt shear capacity, $P_{tt}$	5.1	kN	
Shear resistance (bolts), $v_{hb}$	20.5	kN	
Shear resistance, $v_h$	20.5	kN	
Utilisation	0.171		

### Weld

Item	Value	Units	Remarks
Tension weld <sub>side A</sub>	Pass		
Tension weld <sub>side C</sub>	Pass		
Web Weld	Pass		

Library: ColumnBaseConnections.dll, version: 22.2.0.0

A root cage is to be provided to retain the bolts in the correct positions whilst casting the base. The bolts will be spot welded top and bottom of each 50x50x3RSA with a minimum of 6mm weld x 8mm wide, 8No locations minimum on each bolt.

Tension Capacity per bolt;  $\text{cap} = 1.25\text{kN/mm} \times 8\text{mm} \times 8 = \mathbf{80.000\text{kN}}$ ;  $32.1\text{kN}/2 = \mathbf{16.050\text{kN}}$ ; therefore satisfactory.

The root cage will provide sufficient area to resist the pull-out forces by inspection.

Or provide Rawl Chemical Resin Anchors as per the design over the page.

### Utilisation - Steel failure calculated for anchor: 1

Tension	Shear		Combined	Shear load with lever arm
$\beta_{Ns}$	$\beta_{Vs}$	$\alpha$	$\beta_{Ns}^{\alpha} + \beta_{Vs}^{\alpha}$	$\beta_{V2}$
6.2%	1.4%	2.0	0.4%	3.6%
correct connection				

### Utilisation - Concrete failure

Tension	Shear		Combined
$\beta_{Nc}$	$\beta_{Vc}$	$\alpha$	$\beta_{Nc}^{\alpha} + \beta_{Vc}^{\alpha}$
52.1%	2.8%	1.5	38%
correct connection			

### Hints for the calculations and the program

- According to the current guidelines for the design of anchorages, the calculations in EasyFix4 base on the assumption that the base plate is rigid, which means that redistribution of loads on the anchors due to elastic deformation of the base plate is not taken into account. In the software, the recommended thickness of the base plate can be determined, however the correctness of the installation of the rigid base plate must be checked and confirmed separately.
- The size of the holes in the base plate must not be larger than it is allowed in the table with installation parameters. Otherwise, all gaps in the holes between the anchors and the fixed element must be filled, e.g. by filling the gaps with resin of adequate compressive strength.
- Preparation of holes and installation of fasteners must be performed in accordance with the installation instruction, taking into account the entered input data.
- The information and data contained in EasyFix4 apply only to Rawlplug products. The results of the calculations carried out with the use of the Software are based on data entered by the User, who is exclusively responsible for the correctness of the input data and any errors. In addition, the User is exclusively responsible for the verification and recognition of the calculation results by a competent person, in particular with regard to compliance with applicable standards and regulations.

## Installation data for R-KERII+R-STUDS-20260-88FL

Thread diameter	$d$	20 mm
Hole diameter in substrate	$d_0$	24 mm
Min. hole depth in substrate	$h_0$	85 mm
Nominal depth	$h_{nom}$	80 mm
Calculated min. substrate thickness	$h_{min}$	600 mm
Installation torque	$T_{inst}$	120 Nm
Anchor length	$L$	260 mm
Fixture thickness	$t_{fix}$	15 mm
Hole diameter in fixture	$d_f$	22 mm
Amount of resin per one mount (normal loss)		24 ml
