Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Natural England Copyright Notice

Site of Special Scientific Interest, National Nature Reserve, Ramsar, Special Protection Area, Special Conservation Area, Marine Nature Reserve data (derived from Ordnance Survey 1:10000 raster) is provided by, and used with the permission of, Natural England who retain the copyright and Intellectual Property Rights for the data.

Scottish Natural Heritage Copyright

Contains SNH information licensed under the Open Government Licence v3.0.

Ove Arup Copyright Notice

The Mining Instability data was obtained on licence from Ove Arup & Partners Limited (for further information, contact mining.review@arup.com). No reproduction or further use of such Data is to be made without the prior written consent of Ove Arup & Partners Limited. The supplied Mining Instability data is derived from publicly available records and other third party sources and neither Ove Arup & Partners nor Landmark warrant the accuracy or completeness of such information or data.

Stantec Copyright Notice

The cavity data presented has been extracted from the PBA (now Stantec UK Ltd) enhanced version of the original DEFRA national cavity databases. Stantec UK Ltd retain the copyright & intellectual property rights in the data. Whilst all reasonable efforts are made to check that the information contained in the cavity databases is accurate we do not warrant that the data is complete or error free. The information is based upon our own researches and those collated from a number of external sources and is continually being augmented and updated by Stantec UK Ltd. In no event shall Stantec UK Ltd or Landmark be liable for any loss or damage including, without limitation, indirect or consequential loss or damage arising from the use of this data.

Radon Potential dataset Copyright Notice

Information supplied from a joint dataset compiled by The British Geological Survey and Public Health England. The probability result is only valid for properties above ground. All basement and cellar areas are considered to be at additional risk from high radon levels. If an underground room such as a cellar or basement makes up part of the living or working accommodation, the property should be tested regardless of Radon Affected Area status.

APPENDIX E

Contaminated Land Risk Assessment Methodology

DEFINITION OF RISK ASSESSMENT TERMINOLOGY

In order to evaluate the perceived contamination risks at this site, the severity of the risk in terms of the magnitude of the potential consequence of the linkage occurring has been compared with the likelihood of the linkage existing.

The methodology requires the classification of:

- The magnitude of the **consequence** or severity of the risk occurring.
- The magnitude of the **probability** or likelihood of the risk occurring
- The **Risk Category** is based upon the probability and consequence.

The potential of this is defined by the following below:

Classification of Consequence

CONSEQUENCE		
Classification	Receptor	Definition
Minor	Humans	Non-permanent health effects (easily preventable) by means such as PPE etc. or no effects.
	Controlled Waters	Potential minor or localised release of contamination to local water features.
	Property	Easily repairable effects of damage to building, structures or services. Harm which may result in financial losses or expenditure to resolve.
	Ecology	Short term, localised damage may occur, consequences are spatially and temporally limited.
Mild	Humans	Contamination present although unlikely to constitute a significant chronic health risk.
	Controlled Waters	Pollution of non-sensitive water resources.
	Property	Significant damage to crops and sensitive buildings, structures or services.
	Ecology	Damage to the environment.
Medium	Humans	Chronic (medium to long term) damage to human health.
	Controlled Waters	Chronic (medium to long-term) risk of pollution of sensitive water resources.
	Property	Significant damage to crops, buildings, property or infrastructure (on or off site).
	Ecology	A significant change in a particular ecosystem in the medium to long term.
Severe	Humans	Short term (acute) risk to human health likely to result in 'significant harm', as defined by the EPA 1990, Pt IIA.
	Controlled Waters	Short term risk of pollution of sensitive water resource.
	Property	Catastrophic damage to crops, building, property or infrastructure.
	Ecology	A short term risk to a particular ecosystem or organism.

Classification of Probability

PROBABILITY	
Classification	Definition
Unlikely	There is a contaminant linkage but circumstances are such that it is improbable that an event would occur even in the very long term.
Low Likelihood	There is a contaminant linkage and circumstances are possible under which an event could occur. However it is by no means certain that even over a longer period such event would take place, and it is less likely in the short term.
Likely	There is a contaminant linkage and all the elements are present and in the right place, which means that it is probable that an event will occur. Circumstances are such that such an event is not inevitable, but is possible in the short term and is likely over the long term.
High Likelihood	There is contaminant linkage and an event appears either very likely in the short term, or almost inevitable in the long term. Or there is already evidence at the receptor such an event has occurred (harm or pollution).

The likelihood and consequence of a problem involving each particular pollutant linkage has been attributed a risk rating based on table below, taken from C552 CIRIA, 2001.

Risk Classification Matrix

		Consequence			
		Severe	Medium	Mild	Minor
Probability	High Likelihood	Very High	High	Moderate	Moderate/ Low
	Likely	High	Moderate	Moderate/ Low	Low
	Low Likelihood	Moderate	Moderate/ Low	Low	Very Low
	Unlikely	Moderate/ Low	Low	Very Low	Very Low

Risk Category

RISK CATEGORY	
Category	Definition & Likely actions required
Very Low	- A very low possibility that harm could arise to a receptor. In an event of such harm it is not likely to be severe (would be minor at worst). - No liabilities are likely to arise. - Further Investigation is not required at this stage. - Remediation is very unlikely to be required.
Low	- Harm to a defined receptor is possible, but is likely to be mild at worst. - Liabilities could theoretically arise, but are unlikely. - Further investigation is not required at this stage. - Remediation is unlikely to be required.
Low/ Moderate	- Harm to a defined receptor is possible, but is likely to be medium at worst. - Investigation is likely to be required to clarify the level of potential liability & risk. - Some remediation requirement is possible.
Moderate	- Harm to a defined receptor is possible, but severe harm is unlikely. - Investigation is usually required to clarify the level of potential liability & risk. - Some remediation may be required in the longer term.
High	- Harm to a defined receptor is likely, and could be severe. - The risk, if realised, is likely to result in a substantial liability. - Urgent investigation (if not already undertaken) is likely to be required. - Remediation is likely to be required in the long term, possibly sooner.
Very High	- Severe harm to a defined receptor is very likely, or is occurring/has already occurred. - The risk is likely to result in a substantial liability. - Urgent investigation (if not already undertaken) is likely to be required. - Urgent remediation is likely to be required.
