

What Are Mesh Security Cages?

Mesh cages are commercial grade enclosures made from high strength steel, and are designed for the secure storage of high value or hazardous items within a workplace.

Avanta Security Mesh Cages are available in 6 standard sizes and constructed in a choice of heavy or medium duty mesh panel system. Mesh Panels can easily be modified on-site if your application should change.

Non Standard Sizes

We can offer bespoke sized cages with different entry points.

Please feel free to contact us on 0800 975 4933 for more information on our security mesh cages.

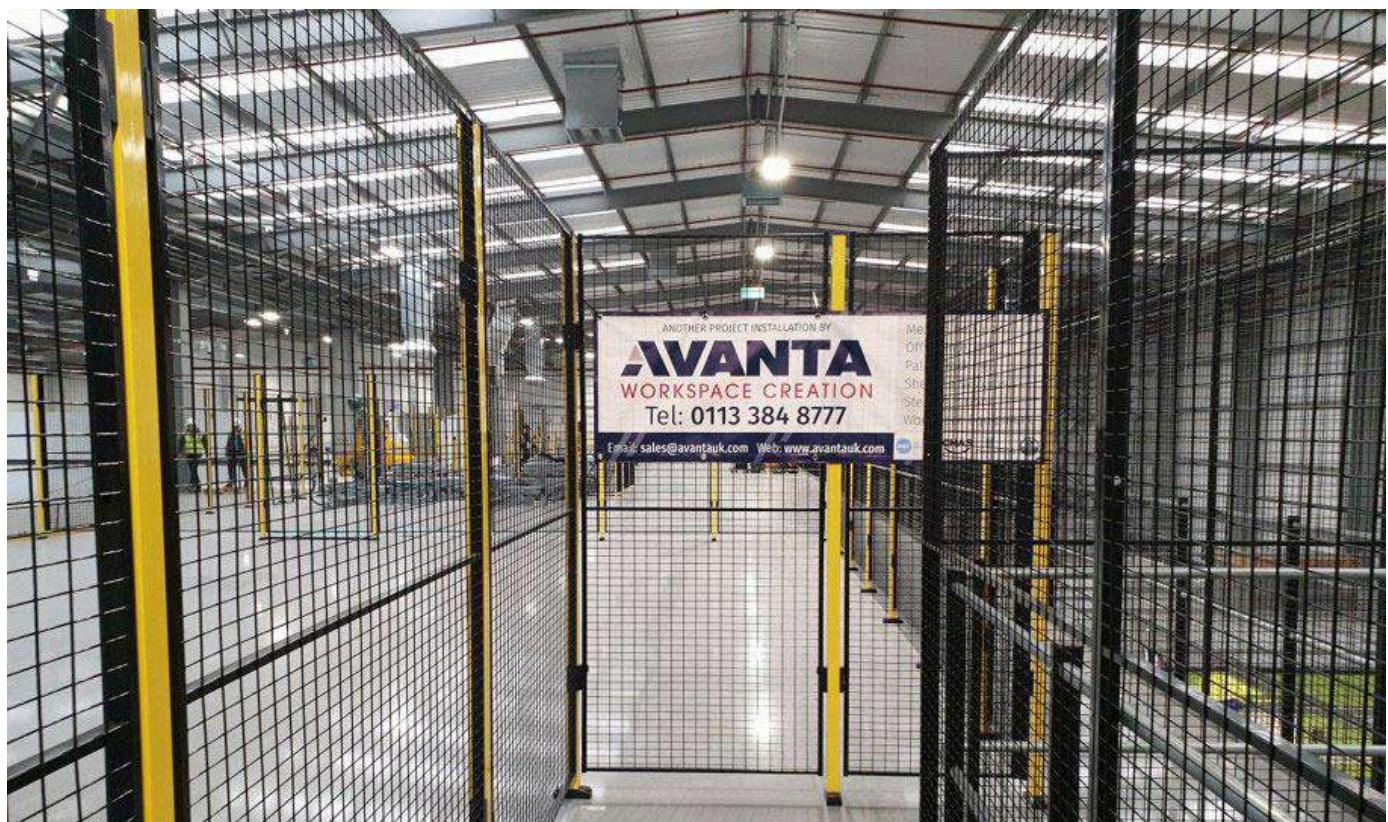

Warehouse Security Enclosures

Within a warehouse environment, mesh cages fulfil a number of important roles including the secure storage of high value goods and stock, and as enclosures for machinery or hazardous materials. From a security perspective, metal mesh enclosures are convenient

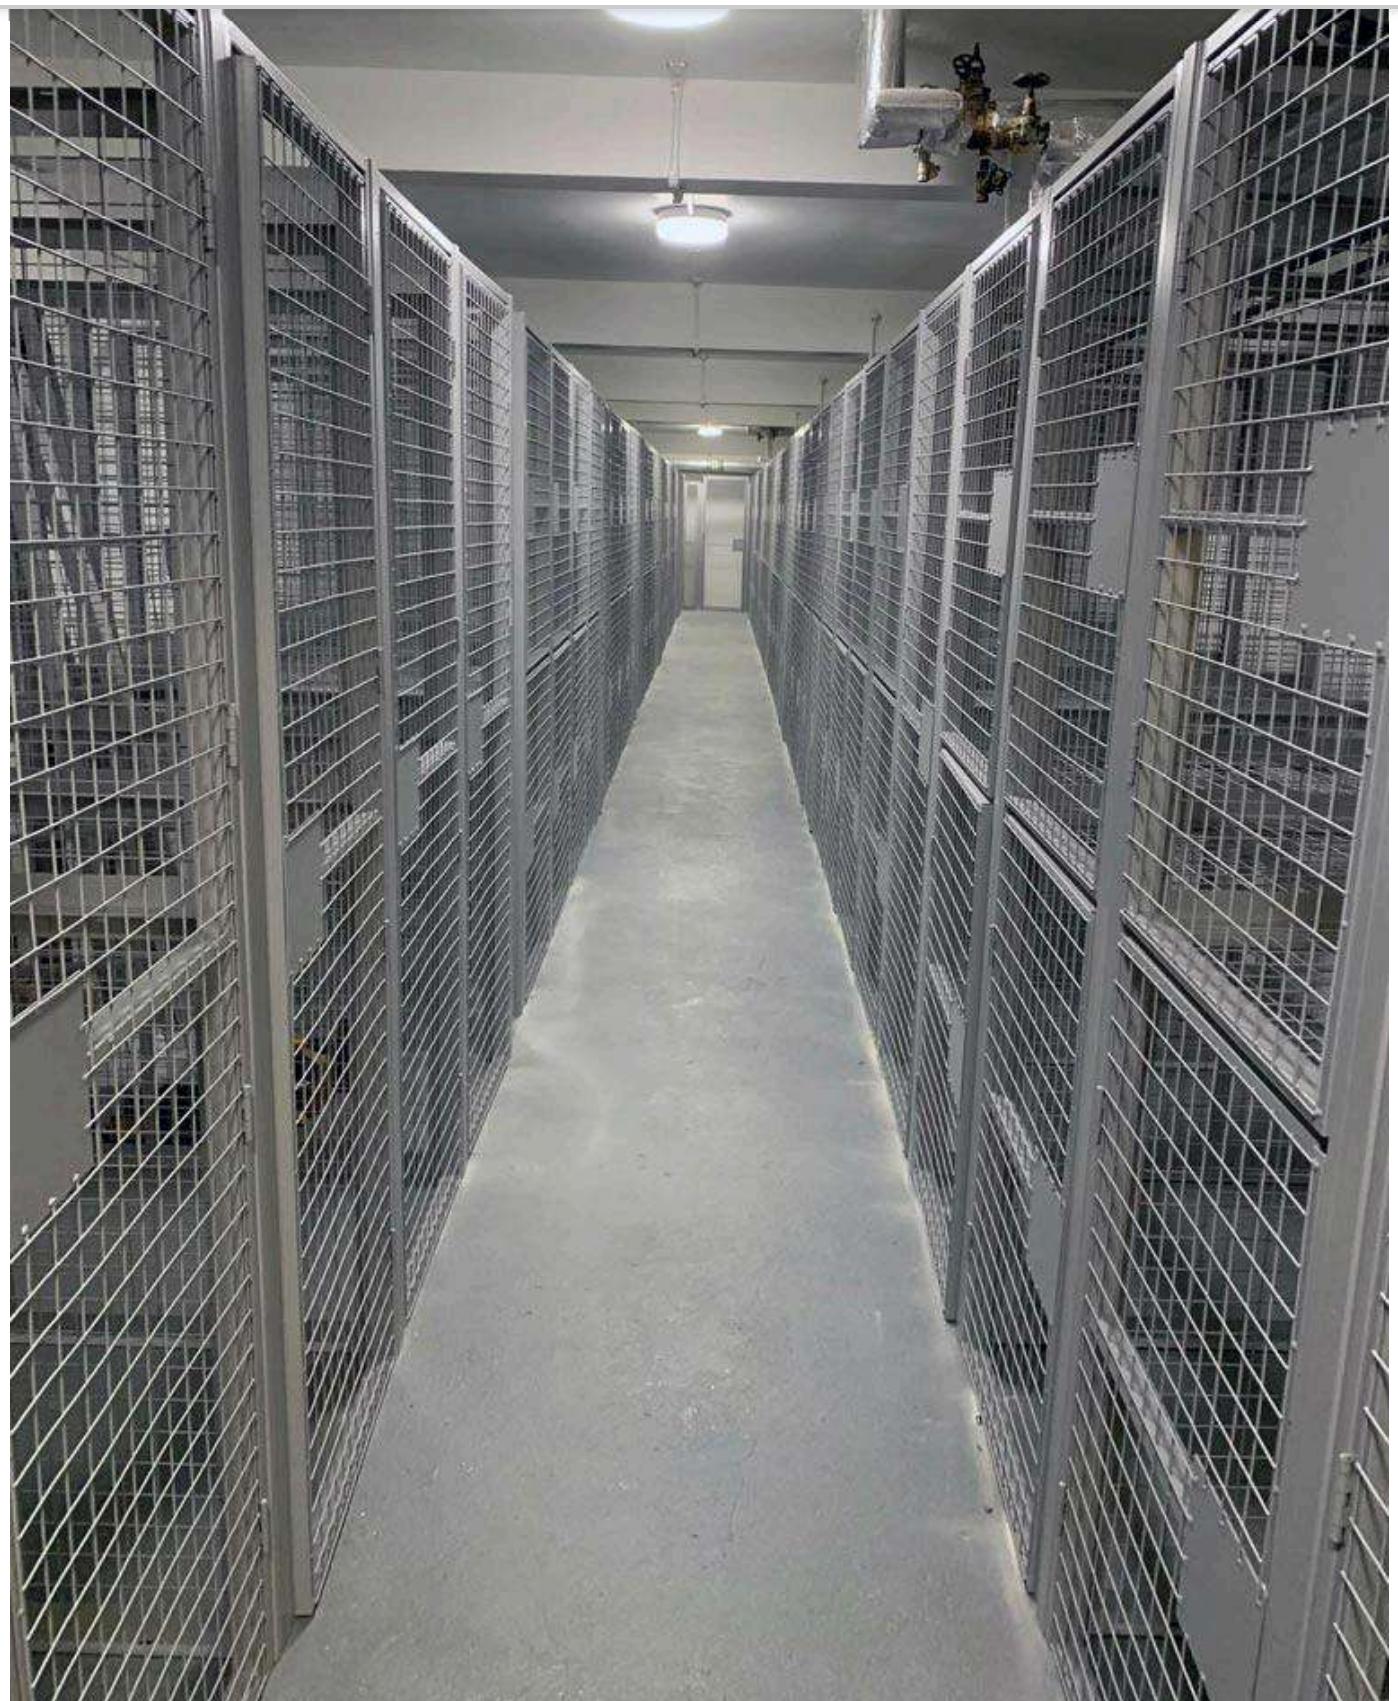

Mesh Machinery Enclosures

Mesh cages are an ideal solution for the safe partitioning and safety fencing of machinery on the work floor in a warehouse, factory or production or processing environment. This helps employees to remain safe when working in close proximity to potentially dangerous machinery. It also helps to protect machinery from damage such as from collisions or from objects falling from above in a multi-level workspace. The use of mesh in the enclosure ensures that machinery can be monitored at all times and receives adequate ventilation where necessary.

Basement Cages

Where residential storage space is at a premium we can offer bespoke basement storage cages for residents in apartments or managed properties. These mesh security cages tend to be bespoke as basements tend to have service pipes and electrics running through them and the cages need to be modified to suit the space.

partitioning solution. The most suitable solution depends on the specific requirements of each organisation; Avanta UK are able to advise the right configuration and components required based on your usage needs.
