Building 1 & 2 Facade Bay Studies

Facade Condition 3 -Side Elevations

Side elevations present a lower degree of permeability with smaller secondary openings. Windows, spandrel panels, brick cobel inset panels are aligned vertically on this elevation to create a legible and articulated façade.

4.28 Drop off Entry Facade Bay Studies

- Provide a high quality first impression and inviting entrance to the Guild Community
- Define a welcoming arrival experience.
- Prioritising pedestrian /cyclist accessibility
- Create a refined home-from-home experience.
- An area for formal drop off for Cars, Minibus and Taxis with generous space for the correct management of traffic and pick up zones.
- Provision of turning circle/turning bay but no facility for parking or waiting, these will be nearby.
- Design which is sympathetic to the local character of the area.
- Provides covered pedestrian access to the lobby in form of a Porte Cochere and also helps to highlight the quality and character of the entry to the development.
- Views into the development, establishing sense of place and basis for clear orientation.
- Main entrance access for residents/members, guests, visitors, personal care/doctors, Taxi and Uber.
- Main access form street to be diverted to Porte Cochere drop-off/pick-up and secondary access to Car Parking, Guild Care, Nursery and other uses.
