Work Item Pictures

Quote Number: QT-7492

No: T1
Type: English Oak

Details: Large tree located in corner of small rear garden immediately adjacent to carport.
This tree appears in good general health but it's sheer size in this confining location is beginning to cause issues with encroachment towards properties and garage.
Natural suppression has caused significant sections of deadwood above fragile carport roof.
To contain size I recommend crown reduction by approximately 2.5 m pruning back to good growth points where available To maintain shape and form.
All large deadwood should be removed from canopy.

No: T2
Type: Lawson cypress

Details: Tree located in rear garden towards back left corner. This tree is in serious decline being almost dead, It will not recover and should be removed before it becomes unstable.
To remove tree cutting stump low.
