The historical maps shown were reproduced from maps predominantly held by the estate assembled for England, Wales and Scotland in the 1840's. In 1864 the Ordnance Survey produced a map of the United Kingdom at a scale of 1:2,500,000. This was the first time that a single map of the whole country had been published. It was based on the Ordnance Survey maps of the 1840's and was updated to include the 1840's maps. The first edition of the map was published in 1933. The second edition was published in 1937. Historical Aerial Photography Published 1948

Source map scale - 1:10,560

The Historical Aerial Photos were produced by the Ordnance Survey at a scale of 1:1,250 and 1:10,560 from Air Force photography. They were produced between 1944 and 1951 as an interim measure, pending preparation of conventional mapping, due to post war resource shortages. New security measures in the 1950's meant that every photograph was rechecked for potentially unsafe information with security sites replaced by fake fields or clouds. The original editions were withdrawn and only later made available after a period of 50 years although due to the accuracy of the editing, without viewing both versions it is not easy to spot the edits. Where available Landmark have included both revisions.

These maps were produced by the Russian military during the Cold War between 1950 and 1987, at scales of 1:103,000, 1:250,000 and 1:500,000. They were produced in the Soviet Union, and show the detailed layout of the cities with all planned roads for development, green areas, and undeveloped land with natural vegetation. Buildings are coloured black and important buildings (such as hospitals, post offices, factories etc.) are numbered, with a unidirectional key describing their use.

They were produced by the Russians for the benefit of navigation, as well as for the planning of military sites and transport hubs, for use if they were to have invaded the UK. The detailed information provided indicates that the areas shown were surveyed using land-based personnel, on the ground, in the cities that are mapped.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client.

In the attached datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.
