Report summary: contaminated land risks

The purpose of this EnviroSmart report is to provide clear and pragmatic advice regarding the nature and potential significance of contaminated land hazards which may be present at the study site.

As such, potential contaminated land risks have been assessed by considering two key items:

- 1. The likelihood that **sources of contamination** are present within the sub surface beneath the site. This gives a measure of the potential for contamination to be occurring at the site.
- 2. The **consequence or severity of any impacts** should contamination be present. The consequence or severity of impact is inferred from the nature of any **potential receptors** (i.e., something that could be adversely affected by a contaminant, such as people, an ecological system, property or a water body) as well as any **relevant pathways** (i.e., a route or means by which a receptor can be exposed to or affected by a contaminant) relating to the site and the surrounding area.

The assessment findings are summarised as follows:

	High likelihood	
1. Probability/likelihood of contamination being present at the Site	Likely	
1. Probability/likelihood of contamination being present at the site	Low likelihood	
	Unlikely	
	Severe	
2. Potential severity/consequence of any impacts	Medium	
2. Potential Seven ty/consequence of any impacts	Mild	
	Minor	
	Very high	
	High	
3. Overall land quality risks posed by the Site	Moderate	
5. Over all faild quality risks posed by the site	Moderate/low	
	Low	
	Very low	

Risk Key

Very High	High	Moderate	Moderate/Low	Low	Very Low
There is a high probability that severe harm could arise to a designated receptor from an identified hazard without appropriate remediation action	Harm is likely to arise to a designated receptor from an identified hazard at the site without appropriate remediation action	It is possible that without appropriate remediation action harm could arise to a designated receptor. It is relatively unlikely that any such harm would be severe, and if any harm were to occur it is more likely that such harm would be relatively mild	It is possible that harm could arise to a designated receptor from an identified hazard. It is likely any harm would be mild	lt is possible that harm could arise to a designated receptor from an identified hazard. It is likely that, at worst if any harm was realised any effects would be mild	The presence of an identified hazard does not give rise to the potential to cause harm to a receptor

It is acknowledged that the risk assessment findings are based on documentary sources of information alone. Typically a proportionate programme of intrusive site investigations would be required to fully verify these findings.

Recommendations (for next steps)

Phase 2 intrusive investigation

 \checkmark

Given the known history of the Site it is considered unlikely that gross contamination is present within the sub-surface. The preliminary risk assessment suggests that the risks posed by in situ land quality are therefore likely to be low to moderate.

However, following consultation with the local authority, and given the proposed more sensitive use of the Site, it recommended that a limited intrusive site investigation (including targeted near surface soil sampling and appropriate laboratory testing) is adopted in order to validate the preliminary risk assessment conclusions and provide further confidence in site conditions to the Planners and development team alike.

1. Introduction

1.1 Background

The study site (from herein known as 'the Site') is situated at The Lodge & The Annexe in Harmondsworth Lane, Heathrow. A location plan of the Site is shown in Section 1.5.

GeoSmart was commissioned by Islamic Shakhsiyah Foundation in May 2016 to undertake a Phase 1 Land Quality Assessment for the Site. The report has been requested in order to support a proposed planning application for the Site.

The proposed development is for the change of use of a Grade II listed office building (Lodge) and an annexed office building to form a nursery and a small primary school.

The EnviroSmart report has been undertaken by firstly compiling information concerning the Site and the surrounding area, including current and historical land uses, geological records and registered pollution incidents. The information which is gathered is then used to construct a 'conceptual site model', including an understanding of likely contaminant sources, pathways and receptors. Finally, a preliminary assessment of risks posed to identified receptors (i.e., people, buildings or the natural environment) from the anticipated land quality at the Site is performed. The risk assessment methodology is consistent with CIRIA C552 (2001); see Section 3.4 for details.

1.2 Purpose of this report

The purpose of this EnviroSmart report is to provide clear and pragmatic advice regarding the nature and potential significance of contamination hazards which may be present at the Site.

1.3 Report contents

This report is divided into two sections, as described below:

Section	Content	Purpose
Section 2: LAND QUALITY ASSESSMENT	A summary of the site history and environmental setting, the findings of the preliminary risk assessment and associated recommendations	To present a clear and concise overview of the land quality issues facing the Site, including recommendations of how to manage any land contamination which may be present
Section 3: SUPPORTING INFORMATION	A collection of site specific information on which the land quality assessment is based	To provide detailed information in support of the risk assessment; this section also represents a source of reference data for use in any subsequent site works/assessments

1.4 Report limitations

It is noted that the findings presented in this report are largely based on information supplied by third parties. Whilst we assume that all information is representative of past and present conditions we can offer no guarantee as to its validity.

This report excludes consideration of potential hazards arising from any activities at the Site other than normal use and occupancy for the intended land uses. Hazards associated with any other activities have not been assessed and must be subject to a specific risk assessment by the parties responsible for those activities.

1. Introduction

1.5 Site location plan

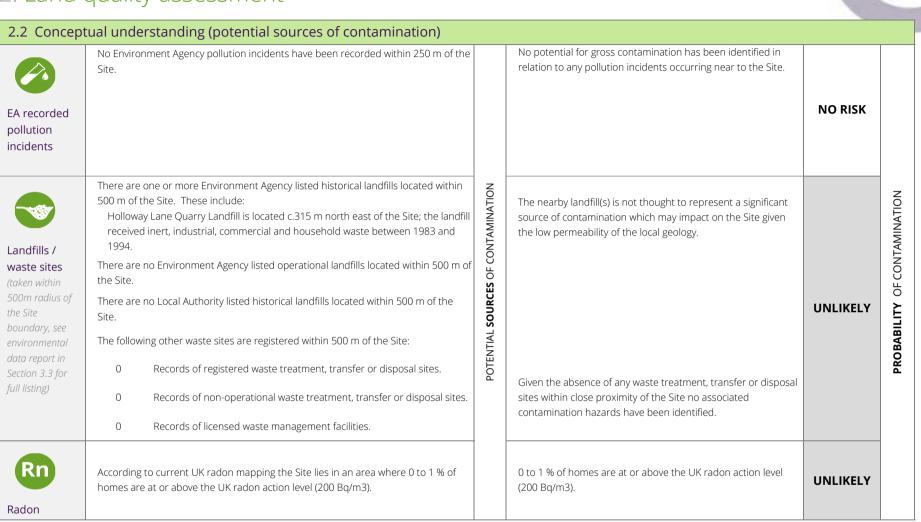

2.1 Site details						
Site name:	The Lodge & The Annexe	Current land cover:	Mix of hardstanding/building cover and softstanding			
Current use:	Unoccupied office accommodation					
Proposed use:	Children's nursery and primary school	Site area:	0.51 ha			

2.2 Conceptual understanding (potential sources of contamination)

	Date	Description of land use		Source description		
Site history	1890-1894	The west of the Site is developed with several adjoining structures of varying shapes and sizes. The east of the Site is mapped as an orchard. The land c.90 m to the north is labelled as a saw pit. The land to the south and south west is mapped as orchards.		The land use history suggests that there is the potential for contamination to have occurred on Site relating to the following: Storage of fuels and/or miscellaneous chemicals.		
use taken within 250m radius of the Site boundary)	1895-1896	The structures to the south west corner of the Site are now demolished. The remaining building footprint largely corresponds with the current "lodge" which is on the Site. The building has small extension structures to the eastern and western walls that are mapped as glasshouses. and a small outbuilding to the west of the larger structure. The saw pit to the north is no longer mapped at this time.	OF CONTAMINATION	Made Ground associated with former development/demolition activities. Asbestos-containing materials (ACM) may have been incorporated within the built structures in the past; the disturbance of any such materials may have resulted in asbestos being present within the subsurface surrounding		VATION

2.3 Conceptual understanding (environmental sensitivity / potential severity of impacts)							
	British Geological Survey mapping indicates that the underlying superficial geology consists of Langley Silt Member which comprises clay and silt and is classified as Unproductive Strata.		Unproductive Strata typically have low permeability and offer negligible water supply or river base flow potential.				
Geology and Groundwater (see the environmental data report in Section 3.3	British Geological Survey mapping indicates that the bedrock geology consists of London Clay Formation (Thames Group), which comprises of clay , silt and sand and is classified as Unproductive Strata.		Unproductive Strata typically have low permeability and offer negligible water supply or river base flow potential.				
for full details)	The Site lies within a 'potential for groundwater flooding to occur at surface' groundwater flood risk susceptibility area based on the underlying geological conditions. The British Geological Survey confidence rating for this susceptibility classification is ".		Based on the susceptibility of the Site to groundwater flooding, a groundwater flood risk assessment should be considered for the Site.	MILD	OF IMPACT		
	The Site does not lie within a Source Protection Zone (SPZ).	PTORS	The depth to groundwater beneath the Site is unknown.				
	The following groundwater abstraction licences are held within 1 km of the Site: General farming and domestic water abstractions are located c.25 m south west, c.185 m south east and c.650 m south east of the Site. Spray irrigation water abstractions are located c.25 m south west and c.185 m south east and c.650 m south east of the Site. One mineral washing water abstraction is located c.650 m east of the Site.	POTENTIAL RECEPTORS	The presence of one or more groundwater abstraction licences within close proximity of the Site indicates a reasonable groundwater resource potential. However, it is noted that these abstractions are likely to relate to the Chalk beneath the London Clay. The likely presence of low-permeability deposits close to the ground surface may offer protection to the underlying aquifer from any near surface contamination. We note that the thickness of these deposits is not known.		POTENTIAL SEVERITY		
HIM	The Site does not lie within a 'Coal Mining Reporting Area'.		The Site does not lie within an identified coal mining area and is therefore unlikely to be affected by related ground stability or mine gas issues.		-		
Geohazards	There are no brine affected areas within 75 m of the Site.		The Site does not lie within an area of former brine working and is therefore unlikely to be affected by related ground stability issues.	MINOR			
	No or limited artificial ground / Made Ground is anticipated on Site. There are no natural hazards (with a hazard rating of moderate or above) at or within 50 m of the Site.						

2.3 Conceptual understanding (environmental sensitivity / potential severity of impacts)						
Surface water (see the environmental data report in Section 3.3 for full details)	The nearest water feature is an unnamed surface water feature located 120 m from the Site boundary. The Site does not lie within a flood risk zone. The following surface water abstraction licences are held within 1 km of the Site: Top-up water abstractions are located c.745 m north west and c.960 m west of the Site.	ORS	The relatively close proximity of the identified surface water feature(s) suggests that a potential linkage could occur if any contamination were present on Site. Mobile contamination may potentially enter nearby water features via any shallow groundwater or possibly via preferential flow pathways such as buried services.	MILD	F IMPACT	
Environmental designations (see the environmental data report in Section 3.3 for full details)	There are no environmentally sensitive areas within 500 m of the Site.	POTENTIAL RECEPTORS	No relevant environmentally designated sites/receptors have been identified.	NO RISK	POTENTIAL SEVERITY O	
Human receptors	Proposed residents/users of the Site plus neighbouring residences.		Human receptors are proposed to be present on Site.	SEVERE		

2.5 Site inspect	tion (see photographs in section 3.2)		
Inspection date	02/06/2016	General site condition	Good
GeoSmart consultant	Paul Hird	Site contact (position)	Mark Rose
Topography	The Site is completely level but appears higher than the adjacent lane.	Ground cover	Approximately 80% of the Site is hard standing and building cover and approximately 20% softstanding.
Current site land use	The building is currently unoccupied and until recently was used as office accommodation.	On-Site structures	One large structure is located in the north west corner of the Site. Known as The Lodge, the building is constructed of yellow brick with pitched grey slate roof and constructed in approximately 1812. The building has been largely extended southwards by adding The Annex extension which is constructed of red brick with a pitched red tile roof and constructed in approximately 1982. Two small brick outbuildings are located on the Site. One in the north west corner of the Site which houses an electricity substation and the second in the south west corner of the Site. The second only appears to be used for storage.
Visual / olfactory evidence of contamination	No visual or olfactory evidence of any on-Site contamination was observed during the site walkover	On-Site drainage	Foul and surface water drain covers are located in the north east of the Site. Drainpipes were noted on all external elevations of the Lodge and the Annex, with further surface water drain covers noted within the carpark located within the western sector of the Site.
Bulk storage tanks (fuel and chemical storage)	No direct evidence of any bulk fuel or chemical storage was observed during the site walkover	Invasive species	No direct evidence of any invasive species was observed during the site walkover

2.5 Site inspection (see photographs in section 3.2)

2. Land quality assessment

27	Potential for radon within the subsurface	Lateral migration towards on site buildings; potential to cause long term health effects	H	Occupants of on-site buildings	MEDIUM	UNLIKELY	LOW RISK	The Site lies in an area where 0 to 1 % of homes are at or above the UK radon action level (200 Bq/m3).	

2.7	Next steps	
~	Phase 2 intrusive investigation	Given the known history of the Site it is considered unlikely that gross contamination is present within the subsurface. The preliminary risk assessment suggests that the risks posed by in situ land quality are therefore likely to be low to moderate. However, following consultation with the local authority, and given the proposed more sensitive use of the Site, it recommended that a limited intrusive site investigation (including targeted near-surface soil sampling and appropriate laboratory testing) is adopted in order to validate the preliminary risk assessment conclusions and provide further confidence in site conditions to the Planners and development team alike. Further advice: Please contact kathrynmair@geosmartinfo.co.uk for further information regarding the need for a Phase 2 investigation. For information on reputable site investigation companies, enquiries can be made directly to your local authority or via www.endsdirectory.com

Disclaimer

This report has been prepared by GeoSmart in its professional capacity as soil and groundwater specialists, with reasonable skill, care and diligence within the agreed scope and terms of contract and taking account of the manpower and resources devoted to it by agreement with its client, and is provided by GeoSmart solely for the internal use of its client.

The advice and opinions in this report should be read and relied on only in the context of the report as a whole, taking account of the terms of reference agreed with the client. The findings are based on the information made available to GeoSmart at the date of the report (and will have been assumed to be correct) and on current UK standards, codes, technology and practices as at that time. They do not purport to include any manner of legal advice or opinion. New information or changes in conditions and regulatory requirements may occur in future, which will change the conclusions presented here.

This report is confidential to the client. The client may submit the report to regulatory bodies, where appropriate. Should the client wish to release this report to any other third party for that party's reliance, GeoSmart may, by prior written agreement, agree to such release, provided that it is acknowledged that GeoSmart accepts no responsibility of any nature to any third party to whom this report or any part thereof is made known. GeoSmart accepts no responsibility for any loss or damage incurred as a result, and the third party does not acquire any rights whatsoever, contractual or otherwise, against GeoSmart except as expressly agreed with GeoSmart in writing.

Important consumer protection information

This search has been produced by GeoSmart Information Limited, New Zealand House, 160-162 Abbey Foregate, Shrewsbury, SY2 6FD. Tel: 01743 276150

Email: info@geosmartinfo.co.uk

GeoSmart Information Ltd is registered with the Property Codes Compliance Board (PCCB) as a subscriber to the Search Code. The PCCB independently monitors how registered search firms maintain compliance with the Code.

The Search Code

• provides protection for homebuyers, sellers, estate agents, conveyancers and mortgage lenders who rely on the information included in property search reports undertaken by subscribers on residential and commercial property within the United Kingdom

• sets out minimum standards which firms compiling and selling search reports have to meet

• promotes the best practice and quality standards within the industry for the benefit of consumers and property professionals

• enables consumers and property professionals to have confidence in firms which subscribe to the code, their products and services.

• By giving you this information, the search firm is confirming that they keep to the principles of the Code. This provides important protection for you.

The Code's core principles

Firms which subscribe to the Search Code will:

- display the Search Code logo prominently on their search reports
- act with integrity and carry out work with due skill, care and diligence
- at all times maintain adequate and appropriate insurance to protect consumers
- · conduct business in an honest, fair and professional manner
- handle complaints speedily and fairly
- ensure that products and services comply with industry registration rules and standards and relevant laws
- monitor their compliance with the Code

Complaints

If you have a query or complaint about your search, you should raise it directly with the search firm, and if appropriate ask for any complaint to be considered under their formal internal complaints procedure. If you remain dissatisfied with the firm's final response, after your complaint has been formally considered, or if the firm has exceeded the response timescales, you may refer your complaint for consideration under The Property Ombudsman scheme (TPOs). The Ombudsman can award compensation of up to £5,000 to you if he finds that you have suffered actual loss as a result of your search provider failing to keep to the Code.

Please note that all queries or complaints regarding your search should be directed to your search provider in the first instance, not to TPOs or to the PCCB.

TPOs contact details:

The Property Ombudsman scheme Milford House 43-55 Milford Street Salisbury Wiltshire SP1 2BP Tel: 01722 333306 Fax: 01722 332296 Email: admin@tpos.co.uk

You can get more information about the PCCB from www.propertycodes.org.uk.

Please ask your search provider if you would like a copy of the search code

Important consumer protection information

GeoSmart Information Limited is registered with the Property Codes Compliance Board as a subscriber to the Search Code. A key commitment under the Code is that firms will handle any complaints both speedily and fairly.

If you want to make a complaint, we will:

- Acknowledge it within 5 working days of receipt.
- Normally deal with it fully and provide a final response, in writing, within 20 working days of receipt.
- Keep you informed by letter, telephone or e-mail, as you prefer, if we need more time.
- Provide a final response, in writing, at the latest within 40 working days of receipt.
- · Liaise, at your request, with anyone acting formally on your behalf.

The Code's core principles

Firms which subscribe to the Search Code will:

- display the Search Code logo prominently on their search reports
- $\boldsymbol{\cdot}$ act with integrity and carry out work with due skill, care and diligence
- \cdot at all times maintain adequate and appropriate insurance to protect consumers
- $\boldsymbol{\cdot}$ conduct business in an honest, fair and professional manner
- $\boldsymbol{\cdot}$ handle complaints speedily and fairly
- ensure that products and services comply with industry registration rules and standards and relevant laws
- monitor their compliance with the Code

If you are not satisfied with our final response, or if we exceed the response timescales, you may refer the complaint to The Property Ombudsman scheme (TPOs): Tel: 01722 333306, E-mail: admin@tpos.co.uk.

We will co-operate fully with the Ombudsman during an investigation and comply with his final decision.

Complaints should be sent to: Lisa Davies Operations Manager

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client.

In the attached datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.
