# EXECUTIVE SUMMARY

WSP was instructed by Uxbridge Developments Limited (“the client”) to undertake a Preliminary Risk Assessment (PRA) at Wellington House, Cowley Road, Uxbridge UB8 2XW (“the Site”).

The Site currently comprises a four-storey concrete brick building, parking and a two-story annex building. The main building is currently utilised partially for office space and partially vacant. A secondary building is present within the redline, labelled as “The Engine”. This building is used for a commercial premise and is not thought to be in any redevelopment proposals. The Site is approximately 0.23 hectares in plan area.

The PRA has been undertaken to develop a preliminary conceptual site model identifying potential ground contamination risks, to evaluate the likely significant risks.

**It should be noted that this executive summary does not form a standalone document and should be read in conjunction with the WSP Preliminary Risk Assessment (Ref: UK0037714.4975).**

---

## ENVIRONMENTAL SETTING

The ground profile at the Site is likely to comprise the Made Ground associated with the Site's previous development. The superficial deposits underlying the Site are likely to comprise the Lynch Hill Gravel Member across the Site with the Taplow Gravel Member outcropping on the western boundary. The bedrock underlying the Site is the London Clay Formation beneath which is the Lambeth and White Chalk Subgroup.

The superficial deposits of the Taplow Gravel Member and Lynch Hill Gravel Member are both classified as Principal Aquifers. The London Clay Formation is classified as an Unproductive Stratum. The Lambeth Group and the White Chalk Subgroup are classified as a Secondary (A) Aquifer and Principal Aquifer, respectively.

Groundwater may be encountered within granular Made Ground if encountered. It is also likely that a shallow groundwater body may be encountered within the superficial deposits of the Taplow Gravel Member and the Lynch Hill Gravel Member. This groundwater has the potential to laterally migrate to surface water features as a potential base flow however, vertical migration is considered to be very limited due to the cohesive nature of the underlying London Clay Formation. A deeper groundwater body also is anticipated to be present within the Lambeth Group and White Chalk Subgroup however will not be in hydraulic continuity with any groundwater in the gravel formations due to the presence of the London Clay which will act as an Aquitard.

Fray's River is located approximately 125m west of the Site (at its closest point). There are no surface water or groundwater abstractions located within 1km of the Site.

The Site is not located within an Environment Agency Source Protection Zone (SPZ). However, the Site is located within the Colne and Guc Nitrate Vulnerable Zone in relation to surface water. There are no other sites of sensitive land uses within 500m of the Site.

## POTENTIAL FOR GROUND CONTAMINATION

WSP considers that the main contamination risk at the Site arises from the potential presence of asbestos within the building. There is the potential for contamination arising from Made Ground associated with the current development (office building, car park and 'engine' building), and the historical site use as residential housing. In addition, other potential undocumented sources of contamination maybe present across the Site.

As no ground will be broken as part of the proposed works, there is limited potential for contamination arising from Made Ground or other contaminants associated with the current buildings and structures onsite and from any onto-site migration from the surrounding historic and current commercial and industrial land use.

In conclusion, the preliminary risk assessment indicates generally a **low** risk to human health and a **low** risk to controlled waters, there is also a **moderate** risk to construction workers during the building refurbishment due to the potential presence of asbestos. This is the risk based on the presumption that asbestos is present within the building and has yet to be removed.

## RECOMMENDATIONS

WSP recommends the following is undertaken as part of the planning and design process for the Site:

- A review of the asbestos management plan is required to ensure an appropriate asbestos survey and asbestos management plan is completed for the building prior to refurbishment.

During the refurbishment works if ground is broken, WSP recommend that appropriate measures are undertaken by the contractor to mitigate the risk of contact with potentially contaminated ground.

It should be noted that this assessment has been carried out assuming that none, or very limited, intrusive groundworks are intended at this Site. If the proposed refurbishment alters in scope this assessment would not be appropriate.

# 1 INTRODUCTION AND OBJECTIVES

---

## 1.1 AUTHORISATION

WSP UK Ltd was instructed by Uxbridge Developments Limited (“the client”) to undertake a Preliminary Risk Assessment (PRA) at Wellington House, Cowley Road, Uxbridge UB8 2XW (“the Site”) as shown **Figure 1**, in **Appendix A.1**.

## 1.2 SITE BACKGROUND

The Site currently comprises a four-storey concrete brick building, parking and a two-story annex building. The main building is currently utilised partially for office space and partially vacant. A secondary building is present in the eastern area of the Site, labelled as “The Engine”. It is understood this building is used for a commercial premise and will not form part of the redevelopment proposals.

The purpose of the preliminary risk assessment (PRA) is to provide technical documents to support the permitted development rights to change from office to residential use through the prior approval process with regard to ground contamination. The Site and current building foundations will not change; therefore, no ground is expected to be broken. The Proposed scheme is shown on the drawings in **Appendix A.2**.

## 1.3 OBJECTIVES

The key objectives of this assessment are to:

- Develop a preliminary conceptual site model (CSM) to identify potential ground contamination risks associated with the Site; and
- Evaluate the likely significance of risks associated with potential ground contamination through a contaminant linkage assessment for the proposed residential end use.

## 1.4 SCOPE OF WORKS

The scope of works undertaken in this assessment comprised:

- A Site walkover of publicly accessible areas to document the current land use and Site setting;
- A review of Unexploded Ordnance (UXO) status of the Site;
- A review of publicly available historical maps and Site plans (where available) to identify former land uses and potential contaminative activities on and surrounding the Site;
- Informal enquiries with the Environment Agency (EA) and Contaminated Land Officer (CLO);
- A review of relevant publicly available information relating to hydrological features, hydrogeology, neighbouring land use, ecologically sensitive uses and geology in order to establish the environmental setting of the Site and sensitivity of the location;
- The purchase of a Landmark Envirocheck Report;
- Development of a preliminary conceptual site model via the source-pathway-receptor contaminant linkage approach; and,
- An outline assessment of environmental risks with respect to ground, groundwater and ground gas conditions associated with the proposed change of use of the Site.

This report has been prepared in general accordance with:

- Part 2A, Environmental Protection Act 1990;
- Environment Agency Land contamination: risk management (LCRM, 2020); and
- The National Planning Policy Framework.

The report contains British Geological Survey (BGS) and Environment Agency (EA) information.

The proposed scope of works will assist with design and facilitate any future planning condition discharge.

## 1.5 LIMITATIONS

This report is addressed to and may be relied upon by the client (**Uxbridge Developments**). It may not be relied upon or transferred to any other parties without the express agreement of WSP in writing. The report should be read and used in full. No responsibility will be accepted where this report is used, either in its entirety or in part, by any other party. WSP cannot be held liable for third party information.

The limitations of this assessment are attached in **Appendix B**.

This assessment has been carried out assuming that no, or very limited, intrusive groundworks are intended at this Site. If the proposed refurbishment alters in scope this assessment would not be appropriate.

## 2 SITE RECONNAISSANCE

### 2.1 SITE DESCRIPTION

The Site location is provided as **Figure 1** in **Appendix A.1** and a layout plan as **Figure 2** in **Appendix A.1**. A Site visit was carried out by WSP on 06 August 2024. Photographic records are included as **Appendix C**. **Figure 2** also shows the location of each photo taken during the Site visit and should be used in conjunction with **Appendix C**.

**Table 2-1** provides information relating to the Proposed Scheme obtained from a review of Ordnance Survey (OS) mapping, MAGIC Map (DEFRA), online aerial photography, the walkover and relevant regulatory information contained within the Envirocheck Report (**Appendix D**) and relevant regulatory information contained within the Groundsure Report (**Appendix E**).

**Table 2-1 – Site Description**

Details	Description
Name and address of Site	Wellington House, Cowley Road, Uxbridge UB8 2XW
Grid reference	505426, 183848
Size	Approximately 0.23 hectares (ha)
Site description and current use	<p>The Site comprises a 4-storey brick building (<b>Photo 1</b>) that is currently partially used for office space (2<sup>nd</sup> floor) and partially vacant (Ground Floor (<b>Photo 13 and 14</b>), 1<sup>st</sup> floor (<b>Photo 7 and 8</b>) and 3<sup>rd</sup> floor (<b>Photo 9 and 10</b>)). The building is labelled “Junction”. The Site is served by a reception area (<b>Photo 5</b>) where access can be gained to office rooms, a comms room (<b>Photo 12</b>), toilets and a staircase to gain access to other floors.</p> <p>The offices on the 3<sup>rd</sup> floor were in the early stages of refurbishment.</p> <p>The building is served by two lifts, with the lift plant room located on the 3<sup>rd</sup> floor (<b>Photo 11</b>).</p> <p>The Site is served by a car park to the rear (<b>Photo 3</b>) which contains a phone mast and switch room (<b>Photo 4</b>).</p> <p>A secondary building is present within the redline, labelled as “The Engine” (<b>Photo 2</b>). This building is used for a commercial premise and is not thought to be in any redevelopment proposals.</p> <p>Access to the main buildings switch room can be gained from the car park area (<b>Photo 5</b>).</p> <p>An electric water heater and electricity meters are located behind wooden doors with access gained from the car park area.</p>
Ground cover	The Site is covered by hardstanding.

Details	Description
Trees and invasive species	The Site is bounded by semi mature trees in the north and east.
Topography	The Site appears flat and ranges from 30 to 31m AOD west to east.
Bulk material storage	No bulk storage materials were noted onsite during the time of the walkover.
Polychlorinated biphenyls (PCBs)	A switch room was noted in the northeast corner of the main building within the Site.
Waste storage	No waste storage was noted onsite.
Asbestos containing materials (ACMs)	<p>No ACMs were noted during the walkover.</p> <p>An Asbestos Deterioration Review was completed by S<sub>2</sub> Partnership Ltd in June 2022 for the Junction and Engine room within Wellington House.</p> <p>The overall risk level was identified as <b>Low</b> with no significant asbestos safety issues identified.</p>
Nearby features	<p>North: Commercial and residential properties to include shopping centres. Uxbridge tube station noted 270m to the northeast.</p> <p>South: Salvation Army property adjacent beyond which is residential housing.</p> <p>East: Residential housing beyond which is a mix of commercial / residential properties.</p> <p>West: Garage (Kwik Fit) located 15m west and residential housing beyond which Fray's River (120m) / Grand Union Canal (445m) / Colne River (500m)</p>

## 3 HISTORICAL POTENTIALLY CONTAMINATIVE LAND USES

The history of the Site and local environs has been reviewed and determined (**Table 3-1** and **Table 3-2**) with reference to Ordnance Survey maps contained within the Envirocheck Report (Ref: 354713978\_1\_1) (Error! Reference source not found.).

### 3.1 ON-SITE HISTORY

**Table 3-1 – Onsite historical map review**

Date of Mapping	Scale	Feature
1868 to 1962	1:10,560 1:2,500	The Site comprises residential housing, associated private gardens in the north / western area of the Site and unnamed buildings in the central, southern and eastern areas of the Site. Mapping notes the buildings in the south to be a form of 'works'. The remaining description is not clear.
1972	1:2,500	The Site has been redeveloped with residential properties no longer noted.
1973	1:2,500	The Site has been redeveloped with buildings only remaining in the central southeastern area of the Site and new building redeveloped in the south. Building in the south noted as the 'Uxbridge Ex Services Club'.
1976	1:2,500	Area within buildings in the southeast noted at 'Wellington Yard'.
1987 to 2024	1:10,560 1:2,500	The Site has been redeveloped with previous buildings cleared. The new layout comprises two buildings – 'Wellington House' and 'Club'. The layout remains the same until present day.

### 3.2 OFF-SITE HISTORY

**Table 3-2 - Off-site potentially contaminative historical features within 250m of the Site.**

Name	Direction	Approx. Distance (m)	Scale	Years feature observed
Undeveloped land Electrical sub station No longer present	NE	Adjacent	1:2,500	1881 to 1975 1975 to 1987 1987 to present
Timber Yard Residential housing Tyre and Battery Depot Residential housing	SW	20	1:2,500 1:10,000 1:10,560	1881 to 1896 1896 to 1972 1972 to 1978 1978 to present
Buildings Works	W	40	1:2,500 1:10,000 1:10,560	1881 to 1962 1962 to 1978

Name	Direction	Approx. Distance (m)	Scale	Years feature observed
Depot, site walkover notes this is now a garage (Kwik fit)				1978 to present
Burial Ground	N	50	1:2,500 1:10,000 1:10,560	1881 to present
Station and 'goods shed' Dismantled Hillingdon road, Buildings developed including Blair House/Boundary house and associated car park Car park has been developed to comprise one building	E	80 to 200	1:2,500 1:10,000 1:10,560	1868 to 1972 1970 to 1972 1972 to 2006 2006 to present
Undeveloped land Buildings Electrical sub station No longer present, residential properties developed	SW	85	1:2,500	1881 to 1962 1962 to 1975 1975 to 1978 1978 to present
Undeveloped land Fire station No longer labelled Youth workshop, works and depots Charter Place	NE	150	1:2,500 1:10,000 1:10,560	1868 to 1914 1914 to 1973 1973 to 1975 1975 to 1988 1988 to present
Buildings and timber yard Grainge's Yard (four works with associated chimney) and Chequers yard (four works) Demolished Shopping centre	N	150 to 250	1:2,500 1:10,000 1:10,560	1868 to 1962 1962 to 1972 1972 to 1973 1973 to present
Gravel pit Gravel pit migrates north Gravel pit migrates east (residential houses to the west) Area comprises allotment gardens and undeveloped land Further residential housing built on the undeveloped land	S	150 to 250	1:2,500 1:10,000 1:10,560	1881 to 1896 1896 to 1914 1914 to 1934 1934 to 1962 1962 to 1973 1973 to present

Name	Direction	Approx. Distance (m)	Scale	Years feature observed
School built to the south of the residential houses				
Buildings	NW	190	1:2,500	1881 to 1962
Car park				1962 to 1973
Electrical sub station				1973 to present
Timber yard	E	200	1:2,500 1:10,000 1:10,560	1881 to 1886 1886 to 1962 1962 to 1973
Buildings				1973 to present

Commercial buildings				2006 to present

## 4 ENVIRONMENTAL SETTING

### 4.1 GEOLOGY

The British Geological Survey (BGS) Map Sheet 255 – Beaconsfield (1:50,000, 2005) has been reviewed. Details of the underlying geology is present in **Table 4-1** together with EA aquifer designations for the relevant geological units.

**Table 4-1 – Ground Conditions Summary**

Geological unit	Location on-site	Description	Aquifer designation
Taplow Gravel Member	Western Site	Sand and gravel	Principal Aquifer
Lynch Hill Gravel Member	Entire Site	Sand and gravel	Principal Aquifer
London Clay Formation	Entire Site	Clay, silt and sand	Unproductive Stratum
Lambeth Group	Entire Site	Clay, silt, sand and gravel	Secondary (A) Aquifer
White Chalk Subgroup	Entire Site	Chalk, calcareous mudstone and flint	Principal Aquifer

It is considered that Made Ground will be present across the entire Site, associated with the current development. Four publicly available BGS boreholes within 100m of the Site boundary have been reviewed. The depth and thickness of the strata encountered are summarised in **Table 4-2**. The borehole locations are shown on an annotated plan presented as **Figure 3 (Appendix A.1)**. The borehole logs reviewed are presented within **Appendix E**.

**Table 4-2 – BGS Borehole Summaries**

Geology	Depth to Base (m bgl*)	Typical Thickness (m)	Water Strikes (m bgl*)	General Description
Made Ground	2.00 to 2.50	2.00 to 2.50	1.80	Brown clayey silty sand and gravel. Gravel is fine to coarse gravel of flint, brick and concrete with occasional ash and clinker.
London Clay Formation	25.70 to 28.00	23.70 to 26.40	14.00 to 27.50	Stiff to very stiff greyish brown or dark brownish grey silty slightly sandy clay with occasional shell fragments.
White Chalk Subgroup	50.00 (not proven)	3.60 to 26.30 (not proven)	26.00	White or grey structureless chalk with a little fine to medium flint gravel and intact chalk fragments.

\* metres below ground level

## 4.2 HYDROLOGY

The following significant surface water features are located within 1km of the Site:

- Fray's River located 125m west of the Site (at its closest point), noted to flow south.
- The Grand Union Canal is found 490m west of the Site.
- River Colne is found 500m west of the Site, noted to flow south.

The Site is not considered to be at risk of flooding from rivers or seas. The Site's western boundary is considered to be at a low risk (1000-year return) of flooding from surface water.

No surface water abstractions are located within 1km of the Site.

## 4.3 HYDROGEOLOGY

There are no groundwater abstractions within 1km of the Site.

The Site is not located within an Environment Agency Source Protection Zone (SPZ).

The BGS flood data indicates that the Site has potential for groundwater flooding to occur at the surface.

## 4.4 PRELIMINARY HYDROGEOLOGICAL MODEL

The ground profile at the Site is likely to comprise the Lynch Hill Gravel Member present across the entire Site underlain by the London Clay Formation. The London Clay in turn is underlain by the Lambeth Formation and the White Chalk Group. The Taplow Gravel Member is likely to outcrop in the west of the Site. Due to previous phases of development at the Site it is likely for Made Ground to underlie the entire Site.

The superficial deposits of the Taplow Gravel Member and Lynch Hill Gravel Member are both classified as Principal Aquifers. The London Clay Formation is classified as an Unproductive Stratum. The Lambeth Group and the White Chalk Subgroup are classified as a Secondary (A) Aquifer and Principal Aquifer, respectively.

Groundwater may be encountered within granular Made Ground if encountered. It is also likely that a shallow groundwater body may be encountered within the superficial deposits of the Taplow Gravel Member and the Lynch Hill Gravel Member. This groundwater has the potential to laterally migrate to surface water features as a potential base flow likely towards the west, however, vertical migration is considered to be very limited due to the cohesive nature of the underlying London Clay Formation.

A deeper groundwater body also is anticipated to be present within the Lambeth Group and White Chalk Sub-group however will not be in hydraulic continuity with any groundwater in the gravel formations due to the presence of the London Clay which will act as an Aquitard.

The BGS Hydrogeological map of the area between Cambridge and Maidenhead (Sheet 14: 1:100,000 – 1984) indicates that the regional groundwater resting in the chalk formation would be encountered approximately 10m with a flow direction towards the south/southeast.

## 4.5 MINERAL EXTRACTION

There are three mineral sites located within 500m of the Site, these are summarised within **Table 4-3**.

**Table 4-3 – Mineral Extraction Records within 500m**

Location	Name	Details	Status
214m south	Cowley Road Gravel Pits	Type: Opencast Commodity: Sand and gravel Ref: 79041	Ceased
224m southeast	Cowley Road Gravel Pits	Type: Opencast Commodity: Sand and gravel Ref: 79042	Ceased
291m south	Cowley Road Gravel Pits	Type: Opencast Commodity: Sand and gravel Ref: 19786	Ceased

## 4.6 LANDFILLING AND INFILLED LAND

There are no recorded current or historic landfills on-site, or within 500m of the Site.

No licensed waste management, transfer or treatment facilities are located within 500m of the Site.

There are three areas of potentially infilled land within 500m of the Site, a summary is provided in

**Table 4-4 – Potentially Infilled Land**

Location	Use	Type
187m south	Unknown filled ground (pit, quarry etc.)	Non-water
200m southeast	Unknown filled ground (pit, quarry etc.)	Non-water
269m south	Unknown filled ground (pit, quarry etc.)	Non-water
430m north	Unknown filled ground (pond, marsh, river, stream, dock etc.)	Water

## 4.7 RADON

The BGS indicates that the Site is in a lower probability radon area (less than 1% of homes are estimated to be at or above the Action Level). No radon protection measures are necessary in the construction of new dwellings or extensions.

## 4.8 UNEXPLODED ORDNANCE RISK (UXO)

Publicly available bomb risk mapping supplied by Zetica is attached in **Appendix F**. The mapping indicates the Site is in a Moderate Risk area for Unexploded Ordnance (UXO) and rated as low on the London Bomb Risk scale. As no ground works are proposed during the development the risk going forward is Very Low. Should ground works in the development become proposed, additional risk assessment should be undertaken.

## 4.9 SENSITIVE LAND USES

The Site is located within the Colne and Guc Nitrate Vulnerable Zone in relation to surface water. There are no other sites of sensitive land uses within 500m of the Site.

## 4.10 CLIMATE CHANGE

### 4.10.1 FUTURE CLIMATE CHANGE UNDER TPC8.5 SCENARIO

#### **Sea Level Rise / Flood Risk**

The Site is currently located approximately 67km west of the North Sea. The Site is at an elevation of approximately 36m Above Ordnance Datum (m AOD).

Under TCP8.5 sea level along the North Sea and within London is expected to rise by 1.15m by 2100. Due to the distance from the Site and the Site's elevation, sea level rise is not expected to impact the Site.

#### **Projected Changes to Groundwater Levels**

The Site is located within the Lower Thamas Gravels Groundwater body. The eFLAG project far-future (2050-2079) projects for groundwater recharge within this catchment report a 0.1mm per day decrease for the autumn months and 0.1mm per day increase for the winter months for this groundwater body. No change to current recharge is indicated for the spring or summer months. This indicates potential minor decreases in groundwater levels, during the autumn, relative to the current baseline but an increase in groundwater levels for winter.

#### **Projected changes to Rainfall**

The expected amount of rainfall for the Site to receive is down 10.4%, from current levels, between 2071-2100. This has the potential to cause less surface water runoff.

## 5 REGULATORY CONSULTATION

### 5.1 REGULATORY INFORMATION

Information relating to various regulatory controls has been taken from the Envirocheck Report, which is presented in Error! Reference source not found.. The potential for hazardous materials to impact upon the ground conditions, surface or groundwater on-site are summarised below within **Table 5-1**.

**Table 5-1 - Regulatory Information within 500m**

Environmental Data	Distance from Site (500m)	Details	Potential risk
Contaminated land register entries and notices	N/A	No entries were recorded within 500m of the Site.	No
Discharge Consents	335m south	Operator: Erostin Plc Discharge: Unknown into River Fray's Effective: 28/07/1989 Revoked: 08/11/1990	No – due to revocation date and downgradient
Local Authority Pollution Prevention and Controls	168m north	Bromptons of Windsor Street (PG6/46 Dry cleaning). Dated: 25/10/2007. Status: Permitted.	No – due to distance from Site
	428m east	Ariana Quality Dry Cleaners (PG6/46 Dry cleaning). Dated: not supplied. Status: Permitted.	No – due to distance from Site
	473m north	L H Jennings Coachworks Ltd (PG6/34 Respraying of road vehicles). Dated: not supplied. Status: Authorised	No – due to distance from Site
Integrated Pollution Controls	N/A	No entries were recorded within 500m of the Site.	No
Pollution Incidents to Controlled Waters	0-250m	Two Category 2 (significant incident) Pollutants: Chemical and sewage. Dates: 17/09/1992 to 22/09/1989. 11 no. Category 3 (minor incident) Pollutants: Oils, general and miscellaneous. Dates: 01/08/1989 to 08/06/1999.	No – due to age of incidents

## 5.2 CORRESPONDENCE

### CONTAMINATED LAND OFFICER (CLO)

The CLO at Hillingdon Council was contacted on 06 August 2024. No response has yet been received. If pertinent information is found this report will be updated or the information will be sent as an addendum.

### ENVIRONMENT AGENCY (EA)

The Environment Agency were contacted on 06 August 2024. A response was received on 16 August 2024. A summary is provided below with a copy of the response found in **Appendix G.1**.

- There are no current or historic landfill sites within 500m of the Site.
- There are no licensed abstractions onsite or within 500m of the Site.
- The EAs records show that the Site is within 500m of an area that was reviewed by the EA Groundwater and Contaminated Land team (reference number CL/03754 and CL/02515). These reviews were in response to a planning application. The EA advised for WSP to contact the local council who are likely to hold further details along with any remediation reports.
- Details contained within the 'Pollution Incidents' excel file have been added to **Table 5-1**.

## 6 CONCEPTUAL SITE MODEL (CSM)

---

### 6.1 INTRODUCTION

The preliminary CSM is based upon the environmental conditions of the Site as described in the previous sections.

The methods used within this assessment follow a risk-based approach with the potential environmental risk assessed qualitatively using the 'source-pathway-receptor' contaminant linkage concept introduced in the guidance documents (principally the EA's LCRM) on the practical implementation of the Environmental Protection Act 1990.

Environmental risk can be defined as the combination of the consequence of a harmful effect and the probability of its occurrence. The existence of a contaminant linkage is primarily dependant on Site usage and environmental conditions.

The environmental risk assessment has been carried out by identifying and evaluating the significance of the following:

- Potential Sources of Contamination: these include any actual or potentially contaminating materials and activities, located either on or in the vicinity of the Site;
- Potential Pathways for Contamination Migration: these are the routes or mechanisms by which contaminants may migrate from the source to the receptor; and
- Potential Receptors of Contamination: these include present or future land users, activities or persons at the Site.

The preliminary CSM was developed based on a residential end use. A summary of the applicable legislative and planning framework for the assessment is presented in **Appendix H**. The onsite preliminary CSM is presented in **Table 6-1**, and the off-site CSM in **Table 6-2**.

**Table 6-1 – Onsite Conceptual site model**

Potential Contaminant Linkage	Source	Potential Contaminants	Pathway	Receptor	Risk	Comment / Justification
PLC-1	Current and historical use as residential housing, office buildings and car parking.	A wide range of potential contaminant, depending on the source material, but may include asbestos, metals, free cyanide, sulphates, hydrocarbons, polyaromatic hydrocarbons (PAHs), volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs).	Inhalation of dust / fibres. Ground gas / vapour migration.	Human Health (current and future site users)	Low Risk (low likelihood)	The Site is predominantly composed of hardstanding. It is considered unlikely that a pollutant linkage pathway is present at the Site.
PLC-2				Human Health (construction works and future maintenance workers)	Low Risk (low likelihood)	There are no intrusive works due to take place; therefore, a low risk is posed to the Site from its historical and current use.
PLC-3			Inhalation of dust / fibres.	Human Health (adjacent site users)	Low Risk (low likelihood)	Areas surrounding the Site include nearby residential properties and general public spaces. There are no intrusive works due to take place; therefore, a low risk is posed to the Site from its historical and current use.
PLC-4			Runoff of contaminated surface water. Lateral migration with groundwater to surface water features (i.e., contribution via baseflow).	Surface water features (River Frays, Grand Union Canal, River Colne)	Low Risk (low likelihood)	There is the potential for any contamination to runoff into the surface water features located on the Site. However, this is considered limited due to the entire Site being comprising of hardstanding and that no groundworks are anticipated at the site.
PLC-5			Leaching of contaminant through the unsaturated zone and subsequent impact on groundwater. Vertical migration of leachable contaminants to underlying superficial aquifers	Groundwater Shallow groundwater within the superficial deposits of the Taplow Gravel Member and the Lynch Hill Gravel Member (Principal Aquifers) Deep groundwater within the Lambeth Group (Secondary (A) Aquifer) and White Chalk Subgroup (Principal Aquifer)	Low Risk (low likelihood)	There are no intrusive works due to take place; therefore, a low risk is posed to the Site from its historical and current use. There is a risk of potential contamination impacting the principal aquifers of the superficial deposits and potential for contamination of surface water features from lateral migration. Any potential impact to the deeper groundwater within the Secondary (A) Aquifer of the Lambeth Group or the principal aquifer of the White Chalk Subgroup is considered to be especially limited due to the cohesive nature of the overlying London Clay Formation (Unproductive Stratum)

PLC-6	Asbestos	Asbestos known to be present in the building	Inhalation of dust / fibres.	Human Health (construction works and future maintenance workers (if not all removed)	<b>Moderate Risk</b> (medium likelihood)	<p>The presence of Asbestos has been confirmed in the building.</p> <p>An Asbestos Deterioration Review was completed by S2 Partnership Ltd in June 2022 for the Junction and Engine room within Wellington House.</p> <p>An appropriate refurbishment / demolition survey would be required should this be removed by a licensed contractor.</p> <p>An asbestos management plan will be required.</p>
-------	----------	--	------------------------------	--	---	--

**Table 6-2 – Off-site conceptual site model**

Potential Contaminant Linkage	Source	Potential Contaminants	Pathway	Receptor	Risk	Comment / Justification
PCL-7	Surrounding historical land uses Agricultural land, gravel pit, metal works, print works, timber yards, joinery works, depots, factory, railway station, fire station.	A wide range of potential contaminant, depending on the source material, but may include asbestos, metals, free cyanide, sulphates, hydrocarbons, polycyclic aromatic hydrocarbons (PAHs), volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs).	Ground gas / vapour migration	Human Health (future site users)	<b>Low Risk</b> (low likelihood)	<p>The Site is predominantly composed of hardstanding. It is considered unlikely that a pollutant linkage pathway is present at the Site.</p> <p>There are no intrusive works due to take place; therefore, a low risk is posed to the Site from its historical and current use.</p>
PLC-8	Surrounding current land uses Railway station, electrical sub stations, industrial estate, depots		Vertical and lateral leaching from impacted soil. Vertical and lateral migration from groundwater.	Groundwater Shallow groundwater within the superficial deposits of the Taplow Gravel Member (Secondary (A) Aquifer) and the Lyn Hill Gravel Member (Principal Aquifer) Deep groundwater within the White Chalk Subgroup (Principal Aquifer)	<b>Low Risk</b> (low likelihood)	<p>It is not known if good environmental practices have been carried out within these areas. It is anticipated that the former industrial usage may have impacted the general water quality surrounding the Site over the years.</p> <p>However, there are no intrusive works due to take place; therefore, a low risk is posed to the Site from its historical and current use.</p> <p>Any potential impact to the principal aquifer of the White Chalk Subgroup is considered to be especially limited due to the cohesive nature of the overlying London Clay Formation (Unproductive Stratum)</p>
PLC-8			Lateral migration within groundwater (i.e. contribution via baseflow)	Current below ground infrastructure and enclosed spaces / structures	<b>Low Risk</b> (low likelihood)	

## 7 CONCLUSIONS AND RECOMMENDATIONS

---

Based on the findings of this preliminary assessment, WSP makes the following conclusions in the context of the proposed development of the Site to residential end use.

### 7.1 ENVIRONMENTAL SETTING

The ground profile at the Site is likely to comprise the Made Ground associated with the Site's previous and development. The superficial deposits underlying the Site are likely to comprise the Lynch Hill Gravel Member across the Site with the Taplow Gravel Member outcropping on the western boundary. The bedrock underlying the Site is the London Clay Formation beneath which is the Lambeth and White Chalk Subgroup.

The superficial deposits of the Taplow Gravel Member and Lynch Hill Gravel Member are both classified as Principal Aquifers. The London Clay Formation is classified as an Unproductive Stratum. The Lambeth Group and the White Chalk Subgroup are classified as a Secondary (A) Aquifer and Principal Aquifer, respectively.

Groundwater may be encountered within granular Made Ground if encountered. It is also likely that a shallow groundwater body may be encountered within the superficial deposits of the Taplow Gravel Member and the Lynch Hill Gravel Member. This groundwater has the potential to laterally migrate to surface water features as a potential base flow however, vertical migration is considered to be very limited due to the cohesive nature of the underlying London Clay Formation. A deeper groundwater body also is anticipated to be present within the Lambeth Group and White Chalk Subgroup however will not be in hydraulic continuity with any groundwater in the gravel formations due to the presence of the London Clay which will act as an Aquitard.

Fray's River is located approximately 125m west of the Site (at its closest point). There are no surface water or groundwater abstractions located within 1km of the Site.

The Site is not located within an Environment Agency Source Protection Zone (SPZ). However, the Site is located within the Colne and Guc Nitrate Vulnerable Zone in relation to surface water. There are no other sites of sensitive land uses within 500m of the Site.

### 7.2 POTENTIAL FOR GROUND CONTAMINATION

Potential onsite sources of contamination have been identified at the current Site associated with potential Made Ground for the Site's current development and historical use as residential housing / commercial properties.

Potential off-site sources of contamination include the surrounding current and historical industrial and commercial land uses including agricultural land, electrical sub stations, industrial estate, depots, metal works, print works, timber yards, joinery works, factory, fire station, current and former railway stations and historical mineral extraction.

Plausible contaminant linkages have been identified with respect to human health predominantly relating to potential inhalation of asbestos fibres and inhalation of / contact with ground gas / vapours. During and following the redevelopment of the Site receptors would include construction / maintenance workers and future site users (residents). As no ground will be broken as part of the proposed works, dermal contact, inhalation or ingestion of soils and dust is not considered to be a

plausible contaminant linkage, therefore this risk is avoided. The risk of contact with asbestos within the building remains.

As no ground will be broken as part of the proposed works, there is limited potential for contamination arising from Made Ground or other contaminants associated with the current buildings and structures onsite and from any onto-site migration from the surrounding historic and current commercial and industrial land use.

Under the proposed change development potential receptors were identified as:

- Current and future site users;
- Neighbouring site users;
- Construction and maintenance workers;
- Groundwater (if encountered) in granular Made Ground, Taplow Gravel Member, Lynch Hill Gravel Member and Weathered London Clay Formation;
- Fray's River, The Grand Union Canal, The River Colne;
- Site structures, particularly foundations, of existing buildings; and
- Water supply pipes.

WSP considers that the main contamination risk at the Site arises from the potential for ACMs to be present within the office building on-site. There is limited potential for contamination arising from Made Ground associated with the current development.

In conclusion, the preliminary risk assessment indicates generally a **low** risk to human health and a **low** risk to controlled waters, apart from a **moderate** risk to construction workers during the building refurbishment due to the presence of asbestos within the building.

## 7.3 RECOMMENDATIONS

WSP recommends the following is undertaken as part of the planning and design process for the Site:

- A review of the asbestos management plan is required to ensure an appropriate asbestos survey and asbestos management plan is completed for the building prior to refurbishment.

During the refurbishment works if ground is broken, WSP recommend that appropriate measures are undertaken by the contractor to mitigate the risk of contact with potentially contaminated ground.

## LIMITATIONS

## REPORT LIMITATIONS - GROUND RISK AND REMEDIATION

### GENERAL

1. WSP UK Limited has prepared this report solely for the use of the Client and those parties with whom a warranty agreement has been executed, or with whom an assignment has been agreed and outlined in the body of the report.
2. Unless explicitly agreed otherwise, in writing, this report has been prepared under WSP UK Limited standard Terms and Conditions as included within our proposal to the Client.
3. Project specific appointment documents may be agreed at our discretion and a charge may be levied for both the time to review and finalise appointments documents and also for associated changes to the appointment terms. WSP UK Limited reserves the right to amend the fee should any changes to the appointment terms create an increase risk to WSP UK Limited.
4. The report needs to be considered in the light of the WSP UK Limited proposal and associated limitations of scope. The report needs to be read in full and isolated sections cannot be used without full reference to other elements of the report and any previous works referenced within the report.

### PHASE 1 GEO ENVIRONMENTAL AND PRELIMINARY RISK ASSESSMENTS

**Coverage:** *This section covers reports with the following titles or combination of titles: phase 1; desk top study; geo environmental assessment; development appraisal; preliminary environmental risk assessment; constraints report; due diligence report; geotechnical development review; environmental statement; environmental chapter; project scope summary report (PSSR), program environmental impact report (PEIR), geotechnical development risk register; and, baseline environmental assessment.*

5. The works undertaken to prepare this report comprised a study of available and easily documented information from a variety of sources (including the Client), together with (where appropriate) a brief walk over inspection of the Site and correspondence with relevant authorities and other interested parties. Due to the short timescales associated with these projects responses may not have been received from all parties. WSP UK Limited cannot be held responsible for any disclosures that are provided post production of our report and will not automatically update our report.
6. The opinions given in this report have been dictated by the finite data on which they are based and are relevant only for the purpose for which the report was commissioned. The information reviewed should not be considered exhaustive and has been accepted in good faith as providing true and representative data pertaining to site conditions. Should additional information become available which may affect the opinions expressed in this report, WSP UK Limited reserves the right to review such information and, if warranted, to modify the opinions accordingly.
7. It should be noted that any risks identified in this report are perceived risks based on the information reviewed. Actual risks can only be assessed following intrusive investigations of the site.
8. WSP UK Limited does not warrant work / data undertaken / provided by others.

### INTRUSIVE INVESTIGATION REPORTS

**Coverage:** *The following report titles (or combination) may cover this category of work: geo environmental site investigation; geotechnical assessment; GIR (Ground Investigation reports); preliminary environmental and geotechnical risk assessment; and, geotechnical risk register.*

## REPORT LIMITATIONS - GROUND RISK AND REMEDIATION

9. The investigation has been undertaken to provide information concerning either:
  - i. The type and degree of contamination present at the site in order to allow a generic quantitative risk assessment to be undertaken; or
  - ii. Information on the soil properties present at the site to allow for geotechnical development constraints to be considered.
10. The scope of the investigation was selected on the basis of the specific development and land use scenario proposed by the Client and may be inappropriate to another form of development or scheme. If the development layout was not known at the time of the investigation the report findings may need revisiting once the development layout is confirmed.
11. For contamination purposes, the objectives of the investigation are limited to establishing the risks associated with potential contamination sources with the potential to cause harm to human health, building materials, the environment (including adjacent land), or controlled waters.
12. For geotechnical investigations the purpose is to broadly consider potential development constraints associated with the physical property of the soils underlying the site within the context of the proposed future or continued use of the site, as stated within the report.
13. The amount of exploratory work, soil property testing and chemical testing undertaken has necessarily been restricted by various factors which may include accessibility, the presence of services; existing buildings; current site usage or short timescales. The exploratory holes completed assess only a small percentage of the area in relation to the overall size of the Site, and as such can only provide a general indication of conditions.
14. The number of sampling points and the methods of sampling and testing do not preclude the possible existence of contamination where concentrations may be significantly higher than those actually encountered or ground conditions that vary from those identified. In addition, there may be exceptional ground conditions elsewhere on the site which have not been disclosed by this investigation and which have therefore not been taken into account in this report.
15. The inspection, testing and monitoring records relate specifically to the investigation points and the timeframe that the works were undertaken. They will also be limited by the techniques employed. As part of this assessment, WSP UK Limited has used reasonable skill and care to extrapolate conditions between these points based upon assumptions to develop our interpretation and conclusions. The assumption made in forming our conclusions is that the ground and groundwater conditions (both chemically and physically) are the same as have been encountered during the works undertaken at the specific points of investigation. Conditions can change between investigation points and these interpretations should be considered indicative.
16. The risk assessment and opinions provided are based on currently available guidance relating to acceptable contamination concentrations; no liability can be accepted for the retrospective effects of any future changes or amendments to these values. Specific assumptions associated with the WSP UK Limited risk assessment process have been outlined within the body or associated appendix of the report.
17. Additional investigations may be required in order to satisfy relevant planning conditions or to resolve any engineering and environmental issues.
18. Where soil contamination concentrations recorded as part of this investigation are used for commentary on potential waste classification of soils for disposal purposes, these should be classed as indicative only. Due consideration should be given to the variability of contaminant concentrations taken from targeted samples versus bulk excavated soils and the potential variability of contaminant concentrations between sampling locations. Where major waste disposal operations are considered, targeted waste classification investigations should be designed.
19. The results of the asbestos testing are factually reported and interpretation given as to how this relates to the previous use of the site, the types of ground encountered and site conceptualisation. This does not however constitute a formal asbestos assessment. These results should be treated cautiously and should not be relied

## REPORT LIMITATIONS - GROUND RISK AND REMEDIATION

upon to provide detailed and representative information on the delineation, type and extent of bulk ACMs and / or trace loose asbestos fibres within the soil matrix at the site.

20. If costs have been included in relation to additional site works, and / or site remediation works these must be considered as indicative only and must be confirmed by a qualified quantity surveyor.

## EUROCODE 7: GEOTECHNICAL DESIGN

21. On 1st April 2010, BS EN 1997-1:2004 (Eurocode 7: Geotechnical Design – Part 1) became the mandatory baseline standard for geotechnical ground investigations.
22. In terms of geotechnical design for foundations, slopes, retaining walls and earthworks, EC7 sets guidance on design procedures including specific guidance on the numbers and spacings of boreholes for geotechnical design, there are limits to methods of ground investigation and the quality of data obtained and there are also prescriptive methods of assessing soil strengths and methods of design. Unless otherwise explicitly stated, the work has not been undertaken in accordance with EC7. A standard geotechnical interpretative report will not meet the requirements of the Geotechnical Design Report (GDR) under Eurocode 7. The GDR can only be prepared following confirmation of all structural loads and serviceability requirements. The report is likely to represent a Ground Investigation Report (GIR) under the Eurocode 7 guidance.

## DETAILED QUANTITATIVE RISK ASSESSMENTS AND REMEDIAL STRATEGY REPORTS

23. These reports build upon previous report versions and associated notes. The scope of the investigation, further testing and monitoring and associated risk assessments were selected on the basis of the specific development and land use scenario proposed by the Client and may not be appropriate to another form of development or scheme layout. The risk assessment and opinions provided are based on currently available approaches in the generation of Site Specific Assessment Criteria relating to contamination concentrations and are not considered to represent a risk in a specific land use scenario to a specific receptor. No liability can be accepted for the retrospective effects of any future changes or amendments to these values, associated models or associated guidance.
24. The outputs of the Detailed Quantitative Risk Assessments are based upon WSP UK Limited manipulation of standard risk assessment models. These are our interpretation of the risk assessment criteria.
25. Prior to adoption on site they will need discussing and agreeing with the Regulatory Authorities prior to adoption on site. The regulatory discussion and engagement process may result in an alternative interpretation being determined and agreed. The process and timescales associated with the Regulatory Authority engagement are not within the control of WSP UK Limited. All costs and programmes presented as a result of this process should be validated by a quantity surveyor and should be presumed to be indicative.

## GEOTECHNICAL DESIGN REPORT (GDR)

26. The GDR can only be prepared following confirmation of all structural loads and serviceability requirements. All the relevant information needs to be provided to allow for a GDR to be produced.

## MONITORING (INCLUDING REMEDIATION MONITORING REPORTS)

27. These reports are factual in nature and comprise monitoring, normally groundwater and ground gas and data provided by contractors as part of an earthworks or remedial works.
28. The data is presented and will be compared with assessment criteria.

#### Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

#### Copyright Notice

© Landmark Information Group Limited 2024. The Copyright on the information and data and its format as contained in this Envirocheck® Report ("Report") is the property of Landmark Information Group Limited ("Landmark") and several other Data Providers, including (but not limited to) Ordnance Survey, British Geological Survey, the Environment Agency/Natural Resources Wales and Natural England, and must not be reproduced in whole or in part by photocopying or any other method. The Report is supplied under Landmark's Terms and Conditions accepted by the Customer.

A copy of Landmark's Terms and Conditions can be found with the Index Map for this report. Additional copies of the Report may be obtained from Landmark, subject to Landmark's charges in force from time to time. The Copyright, design rights and any other intellectual rights shall remain the exclusive property of Landmark and/or other Data providers, whose Copyright material has been included in this Report.

#### Natural England Copyright Notice

Site of Special Scientific Interest, National Nature Reserve, Ramsar, Special Protection Area, Special Conservation Area, Marine Nature Reserve data (derived from Ordnance Survey 1:10000 raster) is provided by, and used with the permission of, Natural England who retain the copyright and Intellectual Property Rights for the data.

#### Scottish Natural Heritage Copyright

Contains SNH information licensed under the Open Government Licence v3.0.

#### Ove Arup Copyright Notice

The Mining Instability data was obtained on licence from Ove Arup & Partners Limited (for further information, contact mining.review@arup.com). No reproduction or further use of such Data is to be made without the prior written consent of Ove Arup & Partners Limited. The supplied Mining Instability data is derived from publicly available records and other third party sources and neither Ove Arup & Partners nor Landmark warrant the accuracy or completeness of such information or data.

#### Stantec Copyright Notice

The cavity data presented has been extracted from the PBA (now Stantec UK Ltd) enhanced version of the original DEFRA national cavity databases. Stantec UK Ltd retain the copyright & intellectual property rights in the data. Whilst all reasonable efforts are made to check that the information contained in the cavity databases is accurate we do not warrant that the data is complete or error free. The information is based upon our own researches and those collated from a number of external sources and is continually being augmented and updated by Stantec UK Ltd. In no event shall Stantec UK Ltd or Landmark be liable for any loss or damage including, without limitation, indirect or consequential loss or damage arising from the use of this data.

#### Radon Potential dataset Copyright Notice

Information supplied from a joint dataset compiled by The British Geological Survey and Public Health England.

#### Natural Resources Wales Copyright Notice

Contains Natural Resources Wales information © Natural Resources Wales and Database Right. All rights Reserved. Contains Ordnance Survey Data. Ordnance Survey Licence number 100019741. Crown Copyright and Database Right. Contains Natural Resources Wales information © Natural Resources Wales and Database Right. All rights Reserved. Some features of this information are based on digital spatial data licensed from the Centre for Ecology & Hydrology © NERC (CEH). Defra, Met Office and DARD Rivers Agency © Crown copyright. © Cranfield University. © James Hutton Institute. Contains OS data © Crown copyright and database right 2024.
