1.0 INTRODUCTION

1.1 Context and Objectives of the Phase I Assessment

SES was commissioned by SLP to undertake a Phase I Assessment of land off The Common, West Drayton, UB7 7HQ. The site is currently used for vehicle storage. A Site Location Plan is presented as Appendix A.

The overall aim of the Phase I Investigation is to assess the environmental risk and to assess potentially complete pollutant linkages associated with the site.

1.2 Scope of Works

A pdf electronic copy of the report will be provided and the scope of works includes:

- A review of published geological, hydrogeological and hydrological information to establish the Site's environmental setting;
- A review of published historical and current Ordnance Survey maps to establish the history of the Site and its immediate surroundings;
- A review of publicly available information from regulatory authority databases, obtained from the Envirocheck database;
- The scope of works was developed in accordance with the Environment Agency LCRM (June 2025);
- Phase I Preliminary risk assessment (PRA) desk based study – first tier of risk assessment that develops the initial conceptual site model to establish whether there are any potentially unacceptable risks;
- A summary of conclusions and recommendations.

2.0 DESK STUDY INFORMATION SOURCES

The objectives of this Phase I desk study is to collate:

- Information relating to potential contaminants of concern, plausible pathways and potential receptors;
- Other relevant characteristics of the site and its surroundings that may impact upon the site.

A study of the site's current and historical land use has been carried out via a Phase I desk study, the data gathering exercise is described in the following sections.

2.1 Desk Study

SES has reviewed the following sources of information in order to characterise the site and its surroundings:

- Envirocheck Report including historical mapping (see Appendix C)
- BGS onshore Geo Index <http://mapapps2.bgs.ac.uk/geoindex/home.html>;
- Flooding information <https://www.gov.uk/check-long-term-flood-risk>
- Mining Remediation Authority Interactive Mapping <https://datamine-cauk.hub.arcgis.com/>
- Defra Mapping <https://magic.defra.gov.uk/MagicMap.aspx>
- Unexploded Bomb Risk map produced by Zetica UXO

2.2 Risk Classification

SES has utilised the available information, together with our experience to assess the environmental risks. Definitions of the risk terms used are provided in Table 1.

Table 1 – Risk Classification	
Risk	Description
Negligible	No contamination risk has been identified which are likely to affect development. No investigation is necessary.
Low	No significant contaminated land risks have been encountered that are likely to affect development, it is possible that investigation will be required.
Low-Moderate	There are unlikely to be significant contaminated land issues associated with the site which will adversely affect its re-development. Minor or localised contamination may be present.
Moderate	Some potential contaminated land risks have been identified that require investigation. The risks identified are unlikely to affect the entire site or preclude development.
Moderate-High	Some potentially significant contaminated land risks have been identified that require investigation. The risks are not likely to prevent redevelopment.
High	Significant potential contaminated land risks have been identified. Investigation is required and a remediation strategy is likely to be required.

3.0 CURRENT AND HISTORICAL LAND USE

3.1 Site Location and Description

The site is approximately 0.52 hectares (ha) in size and is located to the west of The Common, West Drayton, UB7 7HQ (The Site). The grid reference to the centre of the Site is 505170, 178790.

The site is roughly rectangular in shape and is located approximately 1.5km southwest of West Drayton town centre.

During the site walkover the ground surface was noted to be flat and surfaced with road planings. The majority of the site is used for car storage with the small building along the southern boundary used as a car wash facility. Several container offices and portacabins are located adjacent to the site entrance. A derelict residential property is located in the northeast of the site, which is separated from the car storage area by steel clad fencing. Several concrete mixing vehicles are located in the vicinity of the derelict residential property. A temporary steel clad structure, being used at the time of the walkover for car storage, is located to the west of the derelict residential property.

The Site location is illustrated in Appendix A.

Site walkover photographs are presented in Appendix B.

3.2 Current Land Use On-site and Surrounding Area

The Site is currently occupied by hardstanding, temporary structures and derelict residential property with the site being used for vehicle storage.

A site walkover was conducted on 17th February 2026.

The land use around the site is as follows, in general

- North – Riverside Cottage with an associated storage yard and a large lake (Maryfields Lake) beyond.
- East – The Common is located adjacent to the east of the site, with the River Colne and small lakes beyond.
- West – The site is bound to the west by a large lake (Maryfields Lake).
- South – B Smith Transport Services is located adjacent to the south of the site, with a timber yard beyond.

3.3 Historic Land Use on Site and Surrounding Area

The historical map extracts are presented in Appendix C, together with other online sources including Google Maps and Streetview have been reviewed to identify key information, such as potential contamination sources which may impact on the site. These are summarised in Table 2 which includes details from within 250m of the site unless deemed pertinent.

Table 2 – Historical Land Use		
Map Edition	Site	Surroundings
1868	The site comprises a portion of two agricultural fields, of which the northern field is occupied by trees.	The surrounding area is predominantly agricultural in nature. An unnamed road and unnamed watercourse are located adjacent to the east of the site. The watercourse merges/diverges into two watercourses approximately 50m to the southeast of the site. Bigley Ditch meanders in an approximately north to south direction approximately 120m to the west of the site. West Drayton Mill (flour and millboard) is located approximately 250m to the northeast of the site.
1876 & 1881	No coverage.	No coverage to north, east and south. No significant change in west.
1884	A portion of an L-shaped structure is located in the northeast of the site.	The watercourse adjacent to the east of the site is identified as the River Colne. A square building has been constructed approximately 10m to the north of the site.
1896	The L-shaped structure in the northeast of the site has been redeveloped as a rectangular building, entirely within the site boundary.	The square structure 10m to the north is a residential property annotated as Riverside. The River Colne is shown to flow in a north to south direction. West Drayton Mill is annotated as producing millboard. The Great Western Railway – Staines Branch trends approximately southwest to northeast, c.250m to the northwest of the site.
1897	No change.	The western watercourse diverging from the River Colne c.50m to the southeast of the site is identified as the Wyrardisbury River.
1899	No change.	No significant change.
1900	No change.	Bigley Ditch is shown to flow in a north to south meander.
1913	No coverage.	No coverage.
1914	The rectangular building in the northeast of the site has been slightly redeveloped. A small square structure is present in the southwest of the site.	Several buildings been constructed in the field adjacent to the south of the site, one of which is annotated as 'The Bungalow' c.40m to the south of the site. New buildings associated with West Drayton Mill have been constructed c.200m to the northeast of the site.
1915-1920	No change.	No significant change.
1925 & 1926	No coverage.	No coverage.
1932	No change.	No significant change.
1935	The square structure in the southwest of the site is no longer present.	West Drayton Mill is annotated as disused. Several buildings have been constructed in the fields to the south, from approximately 100m distance from the site.
1938	No change.	No significant change.
1948	No change.	A large pond is located c.125m to the north of the site.
1960	No change.	The former West Drayton Mill has been redeveloped. A well is noted approximately 175m to the southwest of the site.
1963-1964	The building in the northeast of the site is annotated as 'Willowdene'. A small T-shaped building is located adjacent to the west of Willowdene and a small rectangular building is located along the southern boundary.	Colne Park Municipal Caravan Park has been constructed approximately 75m to the east of the site. A factory and a disused nursery are annotated c.75m to the south of the site. Further disused nurseries are located c.125m south of the site. Works are identified approximately 200m to the southwest of the site.
1965-1966	No change.	The M4 motorway has been constructed approximately 320m to the south of the site.
1966-1967	No coverage.	No coverage.
1970-1975	No change.	A pond is located approximately 125m to the west of the site with a pit adjacent to the south of the pond. West

Table 2 – Historical Land Use		
Map Edition	Site	Surroundings
		Drayton Mill is again annotated, with associated tanks. A gravel pit is located c.350m to the west of the site.
1970-1973	No change.	A sand and gravel pit is located c.150m to the southwest of the site. West Drayton Mill and associated tanks are no longer annotated.
1975-1977	No change.	The pond located c.125m to the west of the site has expanded and is now located adjacent to the west of the site. The factory located approximately 75m to the south of the site is now identified as a warehouse, with a slight change to the building footprint.
1981-1988	No change.	The works located c.200m to the southwest of the site is now annotated as a breakers yard. Further breakers yards are located c.125m and 250m to the south of the site.
1985	Mapping not centred on site.	Mapping not centred on site.
1987	No coverage.	No coverage to north, east and south. No significant change in west.
1988-1989	No change.	The gravel pit c.350m to the west of the site is now annotated as disused workings.
1988-1990	No change.	A timber yard is indicated adjacent to the warehouse c.75m to the south of the site.
1990	No coverage.	No coverage.
1992	No change.	No significant change.
1996	No coverage.	No coverage.
1999	No change.	Disused workings are indicated c.150m to the southwest of the site. The Great Western Railway – Staines Branch is indicated to be disused and is now identified as a track.
2006	No change.	No significant change.
2025	No change.	The timber yard c.75m to the south is now annotated as a depot. The breakers yard c.125m to the south of the site is indicated to be a recycling site. A large rectangular structure has been constructed adjacent to the north of the site. The road adjacent to the east of the site is annotated as The Common.

4.0 CURRENT AND HISTORICAL LAND USE/SITE CONDITIONS

4.1 Geology

Based on the information included within the Envirocheck Report presented in Appendix C and the publicly available online BGS information, the following ground conditions are anticipated:

Geological Unit	Type	Description
Superficial	Alluvium	Clay, silt, sand and gravel.
Solid	London Clay Formation	Clay, silt and sand.

4.2 Environmental Data Review

This section summarises the publicly available information collated within an Envirocheck search, included as Appendix C, together with other sources indicated.

4.2.1 Hydrology and Hydrogeology

A summary of available information pertaining to hydrology, hydrogeology, water abstractions, discharge consents and pollution incidents to controlled waters is provided as follows.

Watercourses	The nearest surface water feature is the pond 7m to the north of the site. The River Colne is located adjacent to the east of the site beyond The Common.
Flood Risk	The majority of site is recorded to be within in area at risk from flooding from rivers or the sea according to the EA data presented in the Envirocheck report. The site is within a Flood Zone 3 – having a high probability of flooding from rivers and the sea. The site is listed as having a limited risk of flooding from surface water. The site is listed as having a risk for groundwater flooding to occur at the ground surface.
Aquifer Classification	Superficial Geology: Alluvium – Secondary A Aquifer. Solid Geology: London Clay Formation – Unproductive Strata. The Envirocheck report lists the combined superficial and bedrock aquifers as high vulnerability.
Source Protection Zones	The site is not located within a Source Protection Zone.
Springs	None noted in the immediate area.
Wells	An historical well is annotated c.175m to the southwest of the site.
Licensed Surface Water Abstractions	A surface water abstraction relating to Transport: Make-up or Top Up Water, is located 495m to the southeast of the site.
Licensed Groundwater Abstractions	A groundwater abstraction for sand and gravel washing is located 306m to the west of the site. The licence is listed as revoked, lapsed or cancelled.

Table 4 – Hydrology and Hydrogeology	
Discharge Consents	<p>Seventeen discharge consents are listed within 500m of site, with the closest being located 114m to the south of the site relating to sewage discharges – final/treated effluent – not water company. The status is given as new consent by application. A further 7No. authorisations relating to sewage discharges – final/treated effluent – not water company, are recorded below with the approximate distance from Site:</p> <ul style="list-style-type: none"> • 172m southwest (new consent), • 271m north (new consent), • 283m north (revoked), • 289m south (transferred from Waste Act), • 294m south (surrendered), • 364m south (new consent by application), • and 483m north (revoked). <p>Trade effluent discharges relating to site drainage are recorded below with the approximate distance from Site:</p> <ul style="list-style-type: none"> • 119m south (revoked), • 294m south (surrendered), • and 483m north (revoked). <p>An authorisation for the discharge of other matter – surface water is located 284m to the south of the site, for which the status is given as revoked.</p> <p>Trade discharges of cooling water are recorded 332m northeast (revoked) and 498m southeast (surrendered) of the site, respectively. Trade discharges related to mineral workings are located 344m to the southeast of the site. One authorisation is revoked and the other is varied by application.</p> <p>A discharge consent for an unknown discharge, which has been revoked, is located 376m to the south of the site.</p>

Table 4 – Hydrology and Hydrogeology	
Pollution Incidents to Controlled Water	<p>Sixteen pollution incidents to Controlled Waters (all classified as Category 3 - Minor Incidents) are recorded within 500m of the site, with the closest being located 165m to the south of the site, relating to an unknown sewage incident on 02/08/1996. Further incidents relating to unknown sewage are recorded:</p> <ul style="list-style-type: none"> • 183m north (05/01/1995), • 192m northeast (06/07/1995), • 276m southeast (09/01/1992), • and 292m northeast (27/09/1991). <p>Discharges recorded as miscellaneous: unknown are recorded:</p> <ul style="list-style-type: none"> • 178m north (16/01/1995), • 194m northeast (06/07/1995), • 197m northeast (09/10/1994), • 332m northeast (18/11/1992), • 388m north (16/03/1989), • 475m south (13/08/1995), • and 483m north (22/03/1994). <p>An incident recorded as miscellaneous: other, some 199m northeast of the site.</p> <p>Incidents relating to unknown oils are recorded:</p> <ul style="list-style-type: none"> • 219m northwest (08/11/1997), • 251m northeast (10/11/1994), • and 369m south (03/01/1999).
Substantiated Pollution Incident Register	<p>There are 2No. substantiated pollution incidents recorded within 500m of the site, with the closest being located 244m to the south dating from 06/12/2001. The pollutants are given as smoke and mixed/waste oils resulting in a Category 2 significant impact incident with respect to air and a Category 3 minor impact incident with respect to land. A substantiated pollution incident dating from 09/03/2016 is recorded 269m southwest. The pollutant is listed as suspended solids, representing a Category 2 significant impact incident with respect to waters.</p>

4.2.2 Landfill Sites and Waste Management

A summary of information regarding landfill sites (historical or current) and waste management facilities is provided in Table 5 as follows.

Table 5 – Waste	
Local Authority and Historical Recorded Landfills	<p>Ten historical landfill sites are listed within 500m of the site.</p> <p>Historical landfill sites where the waste type is not specified are recorded:</p> <ul style="list-style-type: none"> • 3m north • 256m northwest, • 263m northwest. <p>Historical landfill sites which accepted inert, industrial, commercial and household wastes are recorded</p> <ul style="list-style-type: none"> • 113m west, • 267m northwest, • 407m northwest, • 450m south. <p>A historical landfill accepting inert waste is located 308m north;</p> <p>A historical landfill accepting industrial wastes is located 449m north;</p> <p>A historical landfill accepting inert and industrial wastes is located 459m southwest of the site.</p>
BGS Recorded Landfills	Three BGS recorded landfill sites are listed within 500m of site, located 6m north, 266m northwest and 469m north of the site, respectively.
Other Waste Management Facilities	A waste management facility relating to a metal recycling, vehicle storage, and depollution facility is located 269m to the south of the site.

4.2.3 Pollution Controls and Industrial Land Use

A summary of Pollution Control records and potentially polluting activities (fuel stations) is provided in Table 6.

Table 6 – Pollution Incidents and Industrial use	
Integrated Pollution Controls (IPC)	None listed within 500m of site.
Integrated Pollution Prevention and Control (IPPC)	None listed within 500m of site.
Local Authority Pollution Prevention and Controls (LAPPC)	None listed within 500m of site.
Petrol Filling Stations	An active petrol filling station is located 550m to the northeast of the site.

4.2.4 Radon

No radon protection measures are required at this location for new developments as less than 1% of homes are estimated to be at or above the action level.

4.2.5 Unexploded Ordnance (UXO)

A Zetica unexploded bomb risk map for the site is included as Appendix D. This indicates that the site falls within a low-risk area, representing a bombing density of 15 bombs per 1000 acres or less. No wartime installations are located within 1km of the site. Due to the site being located in a low-risk area, subject to risk tolerance, works can proceed with no special precautions for UXO.

4.3 Historic Mining / Quarrying

The Envirocheck report indicates the site is not located within an area affected by Coal Mining activities, and the interactive Mining Remediation Authority map <https://datamine-cauk.hub.arcgis.com/>, last accessed 13th February 2026, shows the site is not located within a coal mining area as defined by the Mining Remediation Authority.

Twenty BGS Mineral sites, all relating to the extraction of sand and gravel by opencast means are recorded within 1km of the site, with the closest being located 69m to the west of the site. Operations at all these sites have ceased.

No man-made cavities or natural cavities are recorded within 1km of the site.

Natural ground subsidence risks for the site are summarised in Table 7 as follows.

Table 7 – Hazard Risk Designation	
Hazard	Site Risk Designation
Collapsible Ground	No hazard
Compressible Ground	Moderate
Ground Dissolution	No hazard
Landslide	Very Low
Running Sand	Low
Swelling / Shrinking Clay	Very Low

4.4 Environmental Sensitivity

Overall, the site setting is considered to be of **low** sensitivity, due to the following reasons:

- Earliest mapping from 1868 shows the site forming a portion of two agricultural fields. A portion of an L-shaped building was located in the northeast of the site by 1884 and redeveloped by 1896 and 1914 as a residential property identified as ‘Willowdene’. A small square, presumably agricultural structure was present in the southwest of the site between 1914 and 1935. A T-shaped building had been constructed adjacent to ‘Willowdene’ by 1963-1964, along with a rectangular building along the southern boundary, and largely remained unchanged through latest mapping of 2025. The surrounding area was predominantly agricultural over time, with West Drayton Mill located c.250m to the northeast from earliest mapping to c.1970. A factory had been constructed c.75m to the south of the site by 1963-1964 prior to being used as a warehouse and timber yard, and currently a depot. Works were recorded c.200m to the southwest of the site from 1963-1964 until being converted to a breakers yard until the 1980s. A further breakers yard was located 250m to the south and currently serves as a recycling station. The ponds to the north and west of the site were previously agricultural fields, which were then developed as sand and gravel pits; the ponds likely formed from the quarry footprints.
- Superficial deposits of Alluvium (Secondary A Aquifer) and bedrock geology of the London Clay Formation (Unproductive Strata) are recorded at the site.
- The superficial and bedrock aquifers being listed as high vulnerability.

- Twenty BGS Mineral Sites are identified within 1km of the site, with the closest being located 69m to the west of the site for the extraction of sand and gravel by opencast means. Operations at all these sites have ceased.
- No man-made cavities or natural cavities are recorded within 1km of the site.
- The site is not located within a coal mining area.
- A surface water abstraction is related to Make-up or Top Up water is located 495m to the southeast of the site.
- A groundwater abstraction for sand and gravel washing is recorded 306m to the west of the site. The licence is revoked, lapsed or cancelled.
- The absence of surface water and groundwater abstractions within 500m of the site.
- The closest surface water feature is a land drain located adjacent to the northwest of the site.
- Sixteen Category 3 – minor incidents have been recorded within 500m of the site, with the closest relating to a discharge of unknown sewage dating from 02/08/1996 being located 165m to the south of the site.
- The site is located in a Flood Zone 3 with a high risk of flooding from rivers and the sea.
- The site is not located within a Source Protection Zone.
- Ten historical landfill sites are located within 500m of the site, with the closest being located 7m to the north of the site. Three BGS recorded landfills are located within 500m with the closest being located 6m to the north of the site. A metal recycling, vehicle storage, and depollution facility is located 269m to the south of the site.
- Radon protection measures are not required in new buildings as less than 1% of homes are estimated to be at or above the action level.
- The site has a moderate risk of Compressible Ground.

5.0 REGULATORY INFORMATION AND CONSULTATION

5.1 Regulatory Database

The following environmental data has been obtained from a summary of information databases summarised in the Envirocheck Report.

Table 8 – Regulatory Databases Summary			
Item	0m-249m	250m-500m	Details
Local Authority Pollution Prevention and Controls	0	0	None recorded within 500m.
Environmentally Sensitive Sites (SSSI, SAC, SPA, RAMSAR, LNR)	0	0	There are no SSSI, SAC, SPA, RAMSAR or LNR sites within 500m of the site. The site is located in an area of adopted green belt.
Landfill Site, Waste Treatment / Transfer and Disposal Sites	4	10	Ten historical landfill sites are listed within 500m of the site, with the closest being located 3m to the north of the site. The waste types accepted are not specified. A further two historical landfill sites where the waste type is not specified are located 256m and 263m northwest of the site, respectively. Historical landfill sites which accepted inert, industrial, commercial and household wastes are recorded 113m west, 267m northwest, 407m northwest, and 450m south of the site, respectively. A historical landfill accepting inert waste is located 308m north; a historical landfill accepting industrial wastes is located 449m north; and a site accepting inert and industrial wastes is located 459m southwest of the site. Three BGS recorded landfill sites are listed within 500m of site, located 6m north, 266m northwest and 469m north of the site, respectively. A waste management facility relating to a metal recycling, vehicle storage, and depollution facility is located 269m to the south of the site.

6.0 PRELIMINARY RISK ASSESSMENT

6.1 Land Quality Risk Assessment

This section of the report uses the information gathered in previous sections and aims to identify the potential Contaminants, Pathways and Receptors present on site. The elements of the Conceptual Model built in the subsections below are also used in Section 7, which considers the Potential Pollutant Linkages, their significance and acceptability in an Environmental Risk Assessment.

6.2 Contaminants (Sources)

The statutory guidance for Part IIA, DETR Circular 02/2000, defines a Contaminant as:

“a substance which is in, on or under the land and which has the potential to cause harm or to cause pollution of controlled waters”.

As a result of this review, the following potential contaminant sources have been identified on site:

On-Site

- There is the potential presence of Made Ground beneath the site related to the construction of ‘Willowdene’ in the northeast of the site and the other structures present on site over time. Made Ground is also likely due to the recent surfacing works at the site.

Off-Site

- There is the potential presence of Made Ground adjacent to the site related to the construction of the buildings to the north and the road infrastructure to the east.
- There is the potential for contamination associated with the numerous historical landfill sites in the surrounding area. The possibility of peat strata within the superficial deposits of Alluvium may also present a risk of ground gas.
- Contamination may be present associated with the industrial properties to the south and southwest of the site including historical works (latterly a breakers yard) and the historical factory (latterly a warehouse with timber yard) currently used as a depot. An historical breakers yard c.250m to the south is currently a recycling site.

6.3 Receptors

The statutory guidance for Part IIA, DETR Circular 02/2000, defines a Receptor as:

“either (a) a living organism, a group of organisms, an ecological system or a piece of property which (i) is in a category listed in Table A as a type of receptor, and (ii) is being, or could be, harmed, by a contaminant; or (b) controlled waters which are being, or could be, polluted by a contaminant”.

Table 9 lists all the receptors to be considered to be present on and adjacent to the site. Those that are not considered present are excluded from further assessment at this stage.

Table 9 – Potential Contaminant Receptors	
Receptor	Description
Human Health	Future site construction workers. Future site users (site visitors). Neighbouring sites.
Environmental/ Ecological	None.
Controlled waters Surface waters Groundwaters	The Secondary A Aquifer associated with the superficial deposits of Alluvium and the Unproductive Strata associated with the bedrock geology of the London Clay Formation. The closest surface water feature is a pond 7m to the north of the site. The River Colne is located adjacent to the east of the site.
Other	Underground services including drinking water supply pipes.

6.4 Pathways

The statutory guidance for Part IIA, DETR Circular 02/2000, defines a Pathway as:

“One or more routes or means by, or through, which a receptor: (a) is being exposed to, or affected by, a contaminant; or (b) could be exposed or affected”.

Following an assessment of the environmental and geological setting of the site and considering the proposed land use, it is considered that a number of potential pathways for contaminant impact could exist. Table 10 examines the human and environmental exposure pathways separately and indicates which pathways are considered further.

Table 10 – Potential Contaminant Pathways	
Source	Pathway Description
On-Site Contaminant Sources	<ul style="list-style-type: none"> • Ingestion of soils. • Direct contact/absorption through skin/membranes. • Inhalation of dusts +/- vapour/gases. • Direct migration/flow. • Leaching – percolating vadose water/rainwater/groundwater.
Off-Site Sources	<ul style="list-style-type: none"> • Inhalation of dusts +/- vapour/gases. • Direct migration/flow. • Leaching – percolating vadose water/rainwater/groundwater. • Migration of vapours/gases.

7.0 PRELIMINARY CONCEPTUAL SITE MODEL

7.1 Preliminary Environmental Risk Assessment

This section presents the conceptual model for the proposed redevelopment of the site. Those potential contaminants, pathways and receptors that are present are now integrated within the context of potential pollutant linkages; for there to be linkage, there must be a complete source-pathway-receptor link.

Table 11 – Environmental Risk Assessment							
Source	Potential chemicals of concern	Receptor	Potential Pathway	Potential Consequence of completed linkage	Likelihood of linkage	Significance of Risk	Explanation
There is the potential presence of Made Ground beneath the site related to the development of the onsite buildings and recent surfacing works.	Asbestos, unknown fill material, PAH, hydrocarbons and metals.	Future Site Construction workers, Future site users.	Direct contact, ingestion, inhalation of dusts Inhalation of vapours/ gases.	Moderate	Likely	Moderate	Localised contamination is considered due to potential made ground present on site. If any contaminants are encountered during the site investigation, remediation can be applied in order to minimise the risk. A comprehensive intrusive investigation is recommended to assess the risk from contaminated soils. During the investigation, risk can be managed through the use of appropriate PPE and good hygiene practises in-line with industry best practice.
		Neighbouring Site Residents.	Ingestion and inhalation of dusts, gas and vapours	Moderate	Unlikely	Low	Neighbouring residents are unlikely to come in to contact with any impacted soils that may be present at the site, although the 'Riverside' dwelling is adjacent to the north of the site means this possibility cannot be entirely discounted. Suitable site security

Table 11 – Environmental Risk Assessment

Source	Potential chemicals of concern	Receptor	Potential Pathway	Potential Consequence of completed linkage	Likelihood of linkage	Significance of Risk	Explanation
							should be in place to prevent unauthorised access to the site during any development works.
		Secondary A Aquifer associated with the superficial geology and the Unproductive Strata associated with the bedrock geology. The closest surface water feature is a pond located 7m to the north of the site.	Leaching and downward Migration	Moderate	Unlikely	Low to moderate	It is considered there is potential for percolating rainwater to migrate and leach into the underlying aquifers, the pond to the north, and potentially the River Colne to the east.
Contamination associated with the historical works, warehouse, breakers yards, timber yard and current depot and recycling centre to the south and southwest of the site.	Metals, TPH, BTEX, PAH.	Future Site Construction workers, Future site users.	Direct Contact, ingestion, inhalation of dusts Inhalation of vapours/ gases	Moderate	Unlikely	Low	It is considered that there is limited potential for contamination associated with the historical and current land uses to the south and southwest of the site, although this should be confirmed through an intrusive investigation.
		Neighbouring Site Residents.	Ingestion and inhalation of dusts, gas and vapours	Moderate	Unlikely	Low	Neighbouring residents are unlikely to come in to contact with any impacted soils that may be present at the nearby site but due to the residential properties being

Table 11 – Environmental Risk Assessment

Source	Potential chemicals of concern	Receptor	Potential Pathway	Potential Consequence of completed linkage	Likelihood of linkage	Significance of Risk	Explanation
							located adjacent to the north, of the site, this possibility cannot be entirely discounted.
		Secondary A Aquifer associated with the superficial geology and the Unproductive Strata associated with the bedrock geology. The closest surface water feature is a pond located 7m to the north of the site.	Leaching and downward migration	Moderate	Unlikely	Low	It is considered there is potential for contaminants to leach down into the underlying aquifers, the pond to the north, and potentially the River Colne to the east.
There is the potential for ground gases to be generated due to the possible presence of peat within the superficial deposits of Alluvium. The presence of numerous waste sites within 500m of the site may also give rise to the presence of ground gas.	Methane, Carbon Dioxide	Future Site Construction workers, Future site users.	Direct Contact, ingestion and inhalation.	Moderate	Likely	Low to Moderate	Localised potential for ground gas due to the presence of peat within the Alluvium and waste sites within 500m. A formal programme of gas monitoring should be undertaken to inform the gas classification for the site.

8.0 CONCLUSIONS AND RECOMMENDATIONS

8.1 Conclusion

Based on the information contained in this report, the following conclusions can be drawn:

Potential contamination sources are considered, at this stage if present, to be localised.

Based on the information contained in this report and with due regard to the historic and current agricultural use and the proposed future mixed residential/commercial land use, it is the opinion of SES that the site represents a **Low to Moderate risk** with respect to contaminated land liability issues. Therefore, the findings of this report should not prevent successful redevelopment of the Site following a suitable site investigation exercise.

8.2 Recommendations

Based on the available information, **potential** land contamination issues have been identified but these are not considered significant enough to prevent development of the site for the proposed mixed residential/commercial use, provided appropriate mitigation measures are undertaken during the development works. A summary of the recommendations is provided below:

- To confirm the preliminary conceptual site model and review the assessed risk to human health and environmental quality we recommend a Phase 2 intrusive ground investigation on the site to collect samples of soil and groundwater (if encountered) for detailed chemical analysis.
- Production of a Phase 2 Report/GQRA (Generic Quantitative Risk Assessment) Report for submission to the LPA. If contamination is confirmed during the intrusive investigation and following the GQRA, a remediation strategy document should be produced to outline mitigation measures that reduce the residual risk to human health and environmental quality. If any permanent structures are proposed on the site in the future ground gas monitoring would need to be undertaken and assessed.
- In the event that suspected contamination is encountered during the redevelopment, a watching brief may be required. Any suspected contamination should be sampled and classified for disposal as encountered and required. It should be noted that the responsibility for securing a safe development rests with the developer.
- Construction workers should adopt appropriate procedures to manage health and safety risks associated with any contamination.

In addition, we recommend an asbestos survey of the buildings should they be proposed to be redeveloped and demolished prior to intrusive works/demolition.

9.0 CLOSURE

This report has been prepared by SES with all reasonable skill, care and diligence.

This report should be used for information purposes only and should not be construed as a comprehensive characterisation of all site conditions.

This report is based on a variety of third party and some publicly available information. SES does not and cannot guarantee the authenticity of this information.

This report is for the exclusive use of Sir Lad Properties; no warranties or guarantees are expressed or should be inferred by any third parties. Any such party relies upon the report at their risk.

SES disclaims any responsibility to the client and others in respect of any matters outside the agreed scope of the work.

Geology 1:50,000 Maps

This report contains geological map extracts taken from the BGS Digital Geological map of Great Britain at 1:50,000 scale and is designed for users carrying out preliminary site assessments who require geological maps for the area around the site. This mapping may be more up to date than previously published paper maps.

The various geological layers - artificial and landslip deposits, superficial geology and solid (bedrock) geology are displayed in separate maps, but superimposed on the final 'Combined Surface Geology' map. All map legends feature on this page. Not all layers have complete nationwide coverage, so availability of data for relevant map sheets is indicated below.

Artificial Ground and Landslip

Artificial ground is a term used by BGS for those areas where the ground surface has been significantly modified by human activity. Information about previously developed ground is especially important, as it is often associated with potentially contaminated material, unpredictable engineering conditions and unstable ground.

Artificial ground includes:

- Made ground - man-made deposits such as embankments and spoil heaps on the natural ground surface.
- Worked ground - areas where the ground has been cut away such as quarries and road cuttings.
- Infilled ground - areas where the ground has been cut away then wholly or partially backfilled.
- Landscaped ground - areas where the surface has been reshaped.
- Disturbed ground - areas of ill-defined shallow or near surface mineral workings where it is impracticable to map made and worked ground separately.

Mass movement (landslip) deposits on BGS geological maps are primarily superficial deposits that have moved down slope under gravity to form landslips. These affect bedrock, other superficial deposits and artificial ground. The dataset also includes foundered strata, where the ground has collapsed due to subsidence.

Superficial Geology

Superficial Deposits are the youngest geological deposits formed during the most recent period of geological time, the Quaternary, which extends back about 1.8 million years from the present.

They rest on older deposits or rocks referred to as Bedrock. This dataset contains Superficial deposits that are of natural origin and 'in place'. Other superficial strata may be held in the Mass Movement dataset where they have been moved, or in the Artificial Ground dataset where they are of man-made origin.

Most of these Superficial deposits are unconsolidated sediments such as gravel, sand, silt and clay, and onshore they form relatively thin, often discontinuous patches or larger spreads.

LANDMARK INFORMATION GROUP®

Bedrock and Faults

Bedrock geology is a term used for the main mass of rocks forming the Earth and are present everywhere, whether exposed at the surface in outcrops or concealed beneath superficial deposits or water.

The bedrock has formed over vast lengths of geological time ranging from ancient and highly altered rocks of the Proterozoic, some 2500 million years ago, or older, up to the relatively young Pliocene, 1.8 million years ago.

The bedrock geology includes many lithologies, often classified into three types based on origin: igneous, metamorphic and sedimentary.

The BGS Faults and Rock Segments dataset includes geological faults (e.g. normal, thrust), and thin beds mapped as lines (e.g. coal seam, gypsum bed). Some of these are linked to other particular 1:50,000 Geology datasets, for example, coal seams are part of the bedrock sequence, most faults and mineral veins primarily affect the bedrock but cut across the strata and post date its deposition.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Geological	Version	Update Cycle
BGS 1:625,000 Solid Geology British Geological Survey - National Geoscience Information Service	January 2009	As notified
BGS Estimated Soil Chemistry British Geological Survey - National Geoscience Information Service	December 2015	As notified
BGS Recorded Mineral Sites British Geological Survey - National Geoscience Information Service	April 2025	Bi-Annually
BGS Urban Soil Chemistry British Geological Survey - National Geoscience Information Service	December 2015	As notified
BGS Urban Soil Chemistry Averages British Geological Survey - National Geoscience Information Service	December 2015	As notified
CBSCB Compensation District Cheshire Brine Subsidence Compensation Board (CBSCB) Cheshire Brine Subsidence Compensation Board (CBSCB)	August 2011 November 2020	As notified
Coal Mining Affected Areas The Coal Authority - Property Searches	February 2023	
Mining Instability Ove Arup & Partners	June 1998	Not Applicable
Non Coal Mining Areas of Great Britain British Geological Survey - National Geoscience Information Service	May 2015	Not Applicable
Potential for Collapsible Ground Stability Hazards British Geological Survey - National Geoscience Information Service	April 2020	As notified
Potential for Compressible Ground Stability Hazards British Geological Survey - National Geoscience Information Service	January 2019	As notified
Potential for Ground Dissolution Stability Hazards British Geological Survey - National Geoscience Information Service	January 2019	As notified
Potential for Landslide Ground Stability Hazards British Geological Survey - National Geoscience Information Service	January 2019	As notified
Potential for Running Sand Ground Stability Hazards British Geological Survey - National Geoscience Information Service	January 2019	As notified
Potential for Shrinking or Swelling Clay Ground Stability Hazards British Geological Survey - National Geoscience Information Service	January 2019	As notified
Radon Potential - Radon Affected Areas British Geological Survey - National Geoscience Information Service	November 2025	Annually
Radon Potential - Radon Protection Measures British Geological Survey - National Geoscience Information Service	November 2025	Annually

Industrial Land Use	Version	Update Cycle
Contemporary Trade Directory Entries Thomson Directories	December 2025	Quarterly
