A 3D coordinate system is shown with three axes: LB (Lateral-Body), TB (Trunk-Body), and RL (Right-Left). The LB axis points along the body's longitudinal axis, TB points vertically upwards, and RL points laterally to the right. A blue arrow points along the TB axis, and a red arrow points along the RL axis. A small black arrow points along the LB axis.

A vertical strip of patterned paper with a repeating geometric motif. The design consists of a large square divided into four smaller squares by a diagonal line. This is further subdivided into smaller diamonds and squares, creating a complex tessellation. The colors used are blue, red, and gold on a light, off-white background.

A vertical strip of paper with a blue horizontal line near the top and a red wavy line near the bottom.

A vertical strip of a technical drawing, likely a cross-section or a detailed view of a mechanical part. It features several parallel lines forming a stepped or ribbed profile. A small red label with the letter 'a' is positioned near the bottom right of the strip.

A vertical column of handwritten text in cursive script, oriented vertically. The text includes the word "SWACK" in large letters, several short horizontal lines, and a single vertical line at the bottom.

A vertical dashed blue line segment at the top is followed by a series of geometric shapes: a trapezoid, a parallelogram, a triangle, and a square, all sharing a common vertical dashed blue line.
