

SPECIFICATION NOTES - REFER ALSO TO THE TENDER DOCUMENT

1.0 Setting out

1.1 Planting shall be set out exactly as shown on the drawing, and measured from existing fixed points. Curved borders shall be set out using radii centered on the ground using two pinned stakes and a true batten, or with the marker paint. The junction between corner and concave corners shall be cut to form a smooth line between the two. Check that all setting out conforms to the plan before calibration and planting works are carried out. Failure to do so may result in rejection of the work by the landscape architect and may require amendment at the contractor's expense.

1.2 All planting beds shall be a minimum of 1 metre wide, except where there is insufficient space, due to the constraints of walls and path edges, and their boundaries. With narrow beds between walls/fences and path edges, ensure that the bed has space free from concrete before planting. If the bed is wider with concrete, then the landscape architect shall contact the developer or landscape architect to determine if the bed is to be removed or not. The width of the bed will be checked by the inspecting landscape architect and where the width is not as shown, the contractor shall re-cultivate them to the specified width at his own expense.

2.0 Ground preparation

2.1 Pre-planting herbicide application-Apply by suitable spraying equipment, an approved translocated systemic herbicide to the manufacturer's instructions and to 1987 Control of Pesticides Regulations and 2020 COSHH regulations on all beds except those which are both shaded and are to receive aggressive sheet mulch. Spray herbicide if any weeds are present. If the weeds are showing but planting is delayed, spray after one month following cultivation, to allow dormant seed to germinate. All spraying shall be carried out by skilled and qualified operatives, using protective clothing, in suitable weather and wind and any damage caused by spray drift from incorrect usage or spillage, shall be rectified at the contractor's own cost. Do not spray near a water body. Repeat as necessary to ensure complete kill and sale of all dead material from site.

2.2 Carry out the following works to the existing topsoil on site to ensure it conforms to BS 3882:2015, being free from roots larger than 50mm diameter, concrete, all rocks, wire, brick, and have less than 20% clay. Allow for pre-application of herbicide above. Fertilise with 50g per meter square of fertiliser (CFR 156-17) slow release fertiliser in accordance with the manufacturer's instructions. For beds less than 5 metres in width, turn over thoroughly or machine cultivate soil to a depth of 400mm, ensuring that the subgrade and topsoil are completely broken up and the draining, allowing any compaction. For beds greater than 5 metres in width, break up the subgrade and topsoil using a tractor mounted subsoiler or ripper at 500mm centres to a depth of 1000mm except where there are services, or within 10 metres of tree stems or 3 metres of existing hedges. Do not rip areas where roots greater than 10mm diameter are encountered.

2.3 Determine before submitting a tender, the extent of support from the site manager with ground preparation: ensure all of all planting beds is greater to a level 60mm below adjacent grass or paved surfaces, within 400mm of edges to ensure bark or wood chip mulches are retained. Where grass is proposed adjacent to paving, then the soil level shall be flush with the adjacent paved surface to ensure rain water run off. The landscape architect is responsible for ensuring that the final ground conforms to the specification even where the developer and/or main contractor have failed to supply and/or ground topped to the required level. The landscape architect shall allow for adjustment of levels, as specified above, including for topsoil and gravel. Where beds are sloping, ensure that topsoil is graded to the specified levels below pavement & grass surfaces to 400mm of the edges of the bed. This is to allow for rain water and bark or wood chip mulch to fall onto them not set out on to pavements and also allow surface water to drain from paths on to planted areas.

2.4 Strip ground that is shown to be below where there is a paving adjacent to a topsoil level of the grass areas shall be graded to finish flush with the finished pavement level to allow surface water to drain from pavements to soil areas. Soil of grass areas should therefore never be proud of paved areas. Soil levels more than 10 mm below pavement edges will cause more damage on cutting.

2.5 Imported topsoil (where specified and sanctioned by the employer) for making up ground, shall conform to BS 3882: 2015, and be free from roots (over 10mm diameter), concrete, roots, wire and brick, and have less than greater than 20% clay. Such soil shall be cultivated as set out above. Representative samples shall first be approved by the landscape architect before being supplied to site. No imported soil shall be supplied to site without a written instruction.

3.0 Planting

3.1 All planting must be carried out in accordance with the tender document, and accompanying drawings. Refer to the tender document for the preparation of existing topsoil and required depths for planting, watering, and trees, and also for contractual maintenance requirements.

3.2 All substitutions will be accepted without the prior agreement of the inspecting landscape architect. The contractor shall replace at once at his own cost any stock lost, species or variety of plant which has not been specified on the planting plan and schedule, unless on prior written agreement a substitution has been agreed by the inspecting landscape architect. All plants shall be true as specified in the schedule of plants and associated notes.
