

SPECIFICATION NOTES - REFER ALSO TO THE TENDER DOCUMENT.

1.0 Setting out

1.1 Planting shall be set out exactly as shown on the drawing, and measured from existing fixed points. Curved beds that are set out using curves on the ground using two-point stakes and a true bobbin, or with one marker point. The junction between corner and corner shall be cut to form a smooth curve following the check point. All setting out corners to the plan before calibration and planting works are carried out. Failure to do so may result in rejection of the work by the landscape architect and any expense attributable to the contractor's expense.

1.2 All planting beds shall be a minimum of 1 metre wide, except where there is insufficient space, due to the constraints of walls and path edges, and their boundaries with same beds between walls, fences and path edges, ensure that the bed has space free from concrete edgings before planting. If the bed is water with concrete, then the landscape contractor shall contact the building contractor to determine if the bed is to be paved. The width of all beds will be checked by the inspecting landscape architect and where the width is not as shown, the contractor shall re-cultivate them to the specified width at his own expense.

2.0 Ground preparation

2.1 Pre-planting herbicide application-Apply by suitable spraying container, an approved translocated systemic herbicide to the manufacturers instructions and to 1987 Control of Pesticides Regulations and 2020 COSHH recommendations for use. It shall be applied to all areas of bare soil, except those areas which are to be planted and are to receive aggressive sheet mulch. Spray immediately if any weeds are present. If the weeds are already being planted in adjacent, spray after one month following cultivation, to allow dormant seed to germinate. All spraying shall be carried out by skilled and qualified operatives, using protective clothing in suitable weather (no wind and no spray caused by spray drift) from the correct angle of release, shall be notified at the contractor's own cost. Do not spray near a water body. Trees and shrubs, if necessary to ensure complete kill and use of all seed released from soil.

2.2 Carry out the following works to the existing topsoil on site to ensure it conforms to BS 3882:2015, being free from roots larger than 50mm diameter, concrete, all rocks, wire, brick, and have less than 20% clay. Allow for pre-planting herbicide to be applied. Fertilise with 150g per meter square of fertiliser CFP (15-8-12) slow release fertiliser in accordance with the manufacturer's instructions. For beds less than 5 metres in width, lay over topsoil or machine released soil to a depth of 40mm, ensuring that the vegetation and topsoil are completely broken up and the drainage, allowing any compaction. For beds greater than 5 metres in width, break the subgrade and topsoil using a tractor mounted subsoiler or ripper at 500mm centres to a depth of 100mm except where there are services, or where 10 metres of tree stems or 2 metres of existing hedgerows. Do not rip areas where roots greater than 10mm diameter are encountered.

2.3 Determine before submitting a tender, the extent of support from the site manager with ground preparation: before subsoiling, grass or gravel subsoil, within 400mm of edges to ensure bark or wood chip mulch is retained. Three grass is proposed adjacent to paving, then the soil level shall be flush with the adjacent ground surface to maintain water run off. The landscape contractor is responsible for ensuring that the final ground conforms to the specification even where the developer and/or main contractor have failed to supply and/or spread topsoil to the required level. The landscape contractor shall allow for adjustment of levels, as specified above, including for retaining subsoil and topsoil. Where beds are along, ensure that topsoil is graded to the specified levels before pavement & grass surfaces within 400mm of the edges of the bed. This is to allow for sheet mulch and bark or wood chip mulch to be laid flat and not spill out on to pavements and also to allow surface water to drain from paths on to planted areas.

2.4 Spreading ground that is shown to be below where there is a jointly adjacent to a topsoil level of the grass areas shall be graded to finish flush with the finished pavement level to allow surface water to drain from pavements to topsoil areas. Soil of grass areas should therefore never be proud of paved areas. Soil levels more than 10mm below pavement edges will cause minor damage on cutting.

2.5 Imported topsoil (where specified and sanctioned by the employer) for making up ground, shall conform to BS 3882: 2015, and be free from roots (over 50mm diameter), concrete, rocks, wire and brick, and have less than 20% clay. Such soil shall be calibrated as set out above. Representative samples shall first be approved by the landscape architect before being supplied to site. No imported soil shall be supplied to site without a written instruction.

3.0 Planting

3.1 All planting must be carried out in accordance with the tender document, and accompanying drawings. Refer to the tender document for the preparation of existing topsoil and required depths for planting, watering, and tree, area, and also for contractual maintenance requirements.

3.2 No substitutions will be accepted without the prior agreement of the inspecting landscape architect. The contractor shall replace at once at his own cost any stock lost, species or variety of plant which has not been specified on the planting plan and schedule, unless on prior written agreement a substitution has been agreed by the inspecting landscape architect. All plants shall be true to size specified in the schedule of plants and associated notes.
