Hi Michael,

Sorry for the delay coming back to you, as per our previous discussions on this matter due to the previous contractor going into administration and as a result various information not being available we have been finding it difficult to obtain the information being requested. We also feel that the requests are in some cases onerous and whilst we appreciate the Council needs to ensure the safety of future occupiers, we are firmly of the view appropriate precautions have been undertaken and the building is now up and running.

Notwithstanding I provide some responses to the outstanding requests as indicated in purple text in the e-mail below and as attached to this e-mail.

Please can we look to discharge the condition on this basis.

Happy of course to discuss this further.

Regards,

Chris

Chris Maltby
Director / Hatton Planning

Subject: Re: Meadow High School - Condition 9 (iv) & (v) (Contaminated Land) - App Ref: 3348/APP/2025/2374

Hi Chris,

I have received the following from the Council's Contaminated Land Officer. Apologies in advance for the capitalisation.

Contaminated Land Officer comments below:

Having consider the applicant previously submitted supportive information i.e. Ground Gas Protection Validation Report with reference G220201 prepared by CPL dated 1st August 2022, Ground Investigation Report with reference 10776/JW prepared by Soil Consultants Ltd dated 23rd November 2022, BS3882 Sandy Loam Topsoil, and Phase 1 Desk Study and Phase 2 Ground Investigation Report with reference TVC0025 – HYD – V2 – XX – RP – G – 1000 P04 prepared by Hydrock Consultants Limited dated 24th December 2025 which is an updated version of Phase 1 Desk Study & Phase 2 Ground Investigation Report with reference TVC0025-HYD-V2-XX-RP-G-1000 prepared by Hydrock Ltd dated 23 June 2023 of the approved planning application 3348/APP/2023/2266, **we wouldn't be able to recommend the discharge of the attached condition.**

Whilst we have taken time to review the submitted updated Phase 1 Desk Study and Phase 2 Ground Investigation Report with reference TVC0025 – HYD – V2 – XX – RP – G – 1000 P04 prepared by Hydrock Consultants Limited dated 24th December 2025, we wouldn't still be able to recommend the discharge of the outstanding Condition 9(iv) and (v) (Contaminated Land) attached to planning permission ref. 3348/APP/2023/138 dated 02-06-2023 for the following reasons.

1. Whilst some of the reasons for our refusal in the comment dated Thu 25/09/2025 11:36 attached has been addressed in the updated report based on the applicant response dated 25 November 2025 12:06 PM, few of those concerns has not yet been address as noted below despite requesting clarification on those points in our e-mail response dated Wed 26/11/2025 16:25. Please see below the various outstanding issues yet to be address highlighted in red?
 - i. Discussion and agreement with utility providers regarding the materials suitable for pipework. It is understood this was undertaken in consultation with Thames Water at the beginning of the project by ISG, due to ISG going into administration we do not have details of this correspondence. – **CAN YOU PLEASE RE-CONTACT THE UTILITY PROVIDER FOR ITS APPROVAL ON THE MATERIAL USE WHERE YOU CAN'T PROVIDE ANY OF SUCH PREVIOUS CORRESPONDENCE?** We have not been able to obtain confirmation from Thames Water to this specific enquiry. Notwithstanding this we feel it is an unusual request, it is industry standard to use safe products and specifications in relation to all drainage/utility works and we are not aware of any unsafe products that could be used in such circumstances – we therefore consider this request onerous.
 - ii. Production of a Materials Management Plan relating to reuse of soils at the site and import of soils to the site (if required). All materials excavated were disposed of off-site – no reuse on site. Certificates in relation to all imported soils have previously been submitted. – **CAN YOU PLEASE RE-SUBMIT COPIES OF THOSE WASTE TRANSFER NOTE?** Please see the waste transfer notes attached to this e-mail

Therefore, we wouldn't be able to recommend the discharge of condition 9(iv) – Verification Report and (v) – Imported Soil (Contaminated Land) of the approved planning permission 3348/APP/2023/138 without the applicant provision of the above

outstanding information and clarification in respect of the following points below as identified in the report.

1. The reason for importing clean topsoil if no remedial work is required on the site. This was not a requirement from a remediation / contaminated land perspective but was a requirement by the contractor for sufficient topsoil to provide a suitable growing medium. – **THAT IS QUITE UN-USUAL BUT CAN YOU PLEASE PROVIDE ANY DOCUMENTARY EVIDENCE TO CONFIRM THAT ASSERTION? IT MAY BE A STATEMENT FROM TREE SURGEON REPORT.** We don't consider this to be unusual at all, landscapers often bring in soils to ensure an appropriate growing medium to enable any new landscaping to establish itself. We consider this request to be onerous and in any case we have confirmed that the soils brought to site are safe so don't understand why the reason they were brought to site to be relevant.
2. The need for gas protection measure as submitted in the Ground Gas Protection Validation Report with reference G220201 prepared by CPL dated 1st August 2022 if the site gas characteristics level is CS1 as claimed in Phase 1 Desk Study and Phase 2 Ground Investigation Report with reference TVC0025 – HYD – V2 – XX – RP – G – 1000 P03 prepared by Hydrock Consultants Limited dated 26th August 2025. The CPL report referred to above related to a previous development carried out in the northern part of the site by Galliford Try. The need for gas protection on this part of the site was not a recommendation of the Stantec Report, and it is unclear why they were installed. The installation has gone above and beyond what was required. – **WHILST WE TAKE NOTE OF THE SUBMITTED GROUND GAS PROTECTION REPORT (ref: G220201, dated August 2022) prepared by CPL and COMMENT IN RESPECT OF APPLICABLE AFFECTED AREA FOR GAS IN SECTION 7.6 OF THE UPDATED REPORT, CAN YOU PLEASE PROVIDE THE SITE LAYOUT FOR BOTH THE DEVELOPMENTS YOU ARE REFERING TO AS WELL AS EVIDENCE OF MADE GROUND REMOVAL AS STATED IN SECTION 7.6.1 OF THE REPORT?** As previously iterated the report referred to G220201 prepared by CPL relates to an entirely different planning application on a different part of the site. I attach to this e-mail a plan highlighting where the CPL report relates to. Please note the CPL report has no relevance to this application and it is the Stantec Report that is relevant to this application and that confirms no gas protection measures were necessary.
3. Provision of additional technical/scientific reason(s) why the applicant believes there shouldn't be any need for Beryllium exceedance remediation as noted in section 7.3.2.1 of the Phase 1 Desk Study and Phase 2 Ground Investigation Report with reference TVC0025 – HYD – V2 – XX – RP – G – 1000 P03 prepared by Hydrock Consultants Limited dated 26th August 2025. The beryllium exceedances are noted to be the same order of magnitude as the screening criteria (a maximum of 3 mg/kg in Made Ground and 4 mg/kg in natural soils compared to the GAC of 2.2 mg/kg). The GAC used in the assessment were POSresi, which is conservative given the proposed use as a

special needs school. It would not be considered practicable to remediate the site with respect to beryllium considering the concentrations identified. – **WHY YOUR EXPLANATION IS NOTED, WE WOULD HOWEVER ADVISED OF THE NEED FOR A FORM OF REMEDIAL MEASURE CONSIDERING THE PROPOSED END USE AS A SPECIAL NEEDS SCHOOL?** We disagree for the reasons set out above and that a level of risk relevant to the proposed use has been fully considered and implemented.

4. Provision of additional technical/scientific reason(s) why the applicant believes there shouldn't be any need for groundwater exceedance remediation or further work for Cobalt, Copper, Manganese, Cadmium and Nickel as submitted in section 7.5.2 of the Phase 1 Desk Study and Phase 2 Ground Investigation Report with reference TVC0025 – HYD – V2 – XX – RP – G – 1000 P03 prepared by Hydrock Consultants Limited dated 26th August 2025. - With the exception of manganese, the exceedances are noted to be the same order of magnitude as the screening criteria. The groundwater samples collected are from the Boyn Hill Gravel Member, which is noted to be a Secondary A aquifer, and unlikely to be a strategically important or viable groundwater resource. It would not be considered practicable to remediate the groundwater considering the concentrations identified. This planning application does not include planned abstraction of water from this aquifer, and the concentrations are consistent with shallow groundwater in urban areas and therefore are not considered to represent an unacceptable risk to the site users. There would be no vapour risk from the metals identified within the groundwater. – **CAN YOU PLEASE CONTACT THE ENVIRONMENT AGENCY AS REGARDS YOUR SUBMISSION ON THIS IN SECTION 7.5.2 TO BE SURE THEY ARE SATISFIED WITH YOUR CONCLUSION ON THIS?** The Environment Agency have not been able to provide any commentary on these proposals as they have not been involved previously.

Kind regards,

Michael

Subject: RE: Meadow High School - Condition 9 (iv) & (v) (Contaminated Land) - App Ref: 3348/APP/2025/2374

Hi Michael,

Very sorry for the delay with this, its becoming very challenging to get the additional information that is being requested so I'm not sure how we move this forward.

Attached via the link below is however an updated report that answers some of the additional queries including:

- Amendments have been made to Sections 7.3.2.1 and 7.5.2 as requested in last response.
- We have also included a comment regarding the Ground Gas Protection Report (ref: G220201, dated August 2022) prepared by CPL to confirm that this is not applicable to the two storey building covered by this report and planning application, which hopefully clarifies the issue raised.
- We have also updated Section 10 Recommendations for further work, to reflect the discussions below (i.e. removal of assessment of tree influence on foundations, and removal of reference to materials management plan/strategy, as this was not required for the proposed development).

Grateful if this could be shared with your colleague and I'll continue to chase the other matters.

This is the link:  [TVC0025-HYD-V2-XX-RP-G-1000-P04_for issue.pdf](#)

Many thanks,

Chris

Hi Chris,

Thank you for your email.

The Council's Contaminated Land Officer has responded as follows and in the email chain below:

Find below our response to the applicant submission in his email dated 25 September 2025 14:55 highlighted in red.

The applicant will need to respond to our various request i.e. (provide the requested additional information) and update the relevant sections of the submitted report for us to be able to respond to the re-consultation when submitted.

Could your team please review and respond?

Kind regards,

Michael

Hi Michael,

Apologies for the delay in responding to this, following various meetings and comments from others I am now able to bring together a response to each of the points below, my response is in green text.

I hope these responses are sufficient to enable the condition to be discharge, however should there remain any outstanding concerns can I suggest we have a quick teams meeting with the relevant specialists to bottom it out.

I'll await to hear further from you.

Kind regards,

Chris

Subject: Re: Meadow High School - Condition 9 (iv) & (v) (Contaminated Land) - App Ref: 3348/APP/2025/2374

Hi Chris,

Hope you are well.

Regarding Meadow High School application ref. 3348/APP/2025/2374 for the partial discharge of Condition 9(iv) and (v) (Contaminated Land) attached to planning permission ref. 3348/APP/2023/138, the Contaminated Land Officer has commented as follows:

Having consider the applicant submitted supportive information i.e. Ground Gas Protection Validation Report with reference G220201 prepared by CPL dated 1st August 2022, Ground Investigation Report with reference 10776/JW prepared by Soil Consultants Ltd dated 23rd November 2022, BS3882 Sandy Loam Topsoil, and Phase 1 Desk Study and Phase 2 Ground Investigation Report with reference TVC0025 – HYD – V2 – XX – RP – G – 1000 P03 prepared by Hydrock Consultants Limited dated 26th August 2025 which is an updated version of Phase 1 Desk Study & Phase 2 Ground Investigation Report with reference TVC0025-HYD-V2-XX-RP-G-1000 prepared by Hydrock Ltd dated 23 June 2023 of the approved planning application 3348/APP/2023/2266 with both reports recommended the need for further work in section 10 as stated below:

- » Completion and reporting of the remaining groundwater sampling laboratory results. This is no longer a conclusion of version P03 (August 2025) of the report – groundwater sampling is complete and reported within the updated report. - **NOTED***
- » Discussion and agreement with utility providers regarding the materials suitable for pipework. It is understood this was undertaken in consultation with Thames Water at the beginning of the project by ISG, due to ISG going into administration we do not have details of this correspondence. – **CAN YOU PLEASE RE-CONTACT THE UTILITY PROVIDER FOR ITS APPROVAL ON THE MATERIAL USE WHERE YOU CAN PROVIDE ANY OF SUCH PREVIOUS CORRESPONDENCE?***
- » Discussions with regulatory bodies and the warranty provider regarding the conclusions of this report. Local authority consulted as part of the standard planning application process. Only other body would have been the externally sourced building control (JM&P). – **NOTED.***
- » Assessment of tree influence on foundations and design of foundations. Based on plans for the site, there is no proximal tree planting. - **NOTED.***
- » Production of a Materials Management Plan relating to reuse of soils at the site and import of soils to the site (if required). All materials excavated were disposed of off-site – no reuse on site. Certificates in relation to all imported soils have previously been submitted. – **CAN YOU PLEASE RE-SUBMIT COPIES OF THOSE WASTE TRANSFER NOTE?***
- » Writing of a Materials Management Strategy relating to reuse of soils at the site (if required). As above all materials excavated were disposed of off-site – no reuse on site. – **CAN YOU PLEASE RE-SUBMIT COPIES OF THOSE WASTE TRANSFER NOTE?***

We wouldn't be able to recommend the discharge of condition 9(iv) – Verification Report and (v) – Imported Soil (Contaminated Land) of the approved planning permission 3348/APP/2023/138 without the applicant provision of the above outstanding

information where applicable and clarification in respect of the following points as identified in the report.

1. The reason for importing clean topsoil if no remedial work is required on the site. *This was not a requirement from a remediation / contaminated land perspective but was a requirement by the contractor for sufficient topsoil to provide a suitable growing medium.*
– THAT IS QUITE UN-USUAL BUT CAN YOU PLEASE PROVIDE ANY DOCUMENTARY EVIDENCE TO CONFIRM THAT ASSERTION? IT MAY BE A STATEMENT FROM TREE SURGEON REPORT.
2. The need for gas protection measure as submitted in the Ground Gas Protection Validation Report with reference G220201 prepared by CPL dated 1st August 2022 if the site gas characteristics level is CS1 as claimed in Phase 1 Desk Study and Phase 2 Ground Investigation Report with reference TVC0025 – HYD – V2 – XX – RP – G – 1000 P03 prepared by Hydrock Consultants Limited dated 26th August 2025. *The CPL report referred to above related to a previous development carried out in the northern part of the site by Galliford Try. The need for gas protection on this part of the site was not a recommendation of the Stantec Report and it is unclear why they were installed. The installation has gone above and beyond what was required.*
– CAN YOU PLEASE PROVIDE US COPY OF THE STANTEC REPORT AS WELL AS THE SITE LAYOUT FOR BOTH THE DEVELOPMENTS YOU ARE REFERING TO?
- c. Provision of additional technical/scientific reason(s) why the applicant believes there shouldn't be any need for Beryllium exceedance remediation as noted in section 7.3.2.1 of the Phase 1 Desk Study and Phase 2 Ground Investigation Report with reference TVC0025 – HYD – V2 – XX – RP – G – 1000 P03 prepared by Hydrock Consultants Limited dated 26th August 2025. *The beryllium exceedances are noted to be the same order of magnitude as the screening criteria (a maximum of 3 mg/kg in Made Ground and 4 mg/kg in natural soils compared to the GAC of 2.2 mg/kg). The GAC used in the assessment were POSresi, which is conservative given the proposed use as a special needs school. It would not be considered practicable to remediate the site with respect to beryllium considering the concentrations identified.*
– CAN YOU PLEASE UPDATE THAT SECTION OF THE REPORT WITH YOUR EXPLANATION AND SEND US A REVISED COPY FOR RECORD PURPOSE?
- d. Provision of additional technical/scientific reason(s) why the applicant believes there shouldn't be any need for groundwater exceedance remediation or further work for Cobalt, Copper, Manganese, Cadmium and Nickel as submitted in section 7.5.2 of the Phase 1 Desk Study and Phase 2 Ground Investigation Report with reference TVC0025 – HYD – V2 – XX – RP – G – 1000 P03 prepared by Hydrock Consultants Limited dated 26th August 2025. *With the exception of manganese, the exceedances are noted to be the same order of magnitude as the screening criteria. The groundwater samples collected are from the Boyn*

Hill Gravel Member, which is noted to be a Secondary A aquifer, and unlikely to be a strategically important or viable groundwater resource. It would not be considered practicable to remediate the groundwater considering the concentrations identified. This planning application does not include planned abstraction of water from this aquifer, and the concentrations are consistent with shallow groundwater in urban areas, and therefore are not considered to represent an unacceptable risk to the site users. There would be no vapour risk from the metals identified within the groundwater. – CAN YOU PLEASE UPDATE THAT SECTION OF THE REPORT WITH YOUR EXPLANATION AND SEND US A REVISED COPY FOR RECORD PURPOSE?

Could you and your team please review and respond?

Hi Chris,

Hope you are well and thank you for your emails.

Can you please confirm whether you therefore agree to amend the application submissions as follows?:

App ref. 3348/APP/2025/1803

Details pursuant to full discharge of Conditions 15 (Fire Statement) and 16 (Accessibility Statement) ~~and partial discharge of Condition 9(v) (Contaminated Land)~~ attached to planning permission ref. 3348/APP/2023/138 dated 02-06-2023 (Erection of a two-storey academic building (Use Class F1), demolition of existing temporary modular structures and partial demolition of existing main teaching building to facilitate connections to the main school, redevelopment of external hard and soft landscaped areas and associated works).

App ref. 3348/APP/2025/2374

Details pursuant to partial discharge of **Condition 9 parts (iv) and (v)** (Contaminated Land) attached to planning permission ref. 3348/APP/2023/138 dated 02-06-2023 (Erection of a two-storey academic building (Use Class F1), demolition of existing temporary modular structures and partial demolition of existing main teaching building to facilitate connections to the main school, redevelopment of external hard and soft landscaped areas and associated works).

All relevant contaminated land documentation would be removed from app ref. 3348/APP/2025/1803 and added to app ref. 3348/APP/2025/2374 instead.

Hi Michael,

Further to my e-mail last week please find attached the landscape plans for the MHS. The proposed soils are only to be used in the areas of soft landscaping. The total volume of imported soils is approximately 200 tonnes.

As mentioned, it is probably best that this is considered in connection with the submission of condition 9 part iv that was made last week.

Subject: RE: Meadow High School - Condition 9 (Contaminated Land) - App Ref: 3348/APP/2025/1803

Hi Michael, I hope you are well.

Sorry I've not come back to you on this yet, still trying to get the info from the suppliers, but nearly there.

I just wanted to let you know that I have today submitted the information required to discharge Condition 9 part iv – Remediation Verification. I think this was part of the concern raised in the comments from the Contaminated Land Officer that he didn't have this information in respect of the remediation that was required. As set out no remediation was required in the end and this is fully detailed in the submission. Due to the size of the document I had to split it into several parts to upload to the Planning Portal however it is also available here as a single document if that is easier for you/your colleague to deal with. [TVC0025-HYD-V2-XX-RP-G-1000-P03.pdf](#)

I'll be back in touch soon with the information to enable the discharge of part 9(v), if we need to agree a further EoT happy to do that.

Regards,

Chris

Hi Chris,

Hope you had a good break.

Can we please agree an extension of time to allow for submission and re-consultation? Would 19th September be agreeable?

Kind regards,

Michael

Hi Michael,

I just wanted to let you know we are working on this and getting the information, we have just had a bit of difficulty getting verification of where the soils originated. I'm on leave next week but hope to be in a position to update you on this and the other conditions that remain to be discharged when I turn.

Thank you for your patience.

Regards,

Chris

Thanks Michael,

Its sounds like from this response that this needs to be considered together with our submission to discharge part 9(iv) (remediation) we are currently pulling this together and will submit the information shortly. In the meantime, we can deal with the other comments i.e. where the imported soils are to be used on site etc

Regards,

Chris

Subject: Meadow High School - Condition 9 (Contaminated Land) - App Ref: 3348/APP/2025/1803

Hi Chris,

Hope you are doing well.

I write with respect to the Meadow High School application (ref. 3348/APP/2025/1803) which seeks permission for:

Details pursuant to full discharge of Conditions 15 (Fire Statement) and 16 (Accessibility Statement) and partial discharge of Condition 9(v) (Contaminated Land) attached to planning permission ref. 3348/APP/2023/138 dated 02-06-2023 (Erection of a two-storey academic building (Use Class F1), demolition of existing temporary modular structures and partial demolition of existing main teaching building to facilitate connections to the main school, redevelopment of external hard and soft landscaped areas and associated works).

The Contaminated Land Officer has commented as follows:

Having consider the application submitted without adequate supportive information in respect of Condition 9(v) (Contaminated Land) apart from the attached Soil Results, we wouldn't be able to recommend the discharge of condition 9(v) (Contaminated Land – Imported Soil) of the approved planning permission 3348/APP/2023/138 due to lack of adequate supportive information.

The Applicant will need to provide relevant information as relates to the verification of all the approved remedial work that has been carried out on the site, information in relation to location of the site where the imported soil are to be used (site layout) for remediation, information as regards where the imported soil came from with quantity as well as information on any other materials imported to the site.

Without this information, the application cannot be supported.

Could you please respond to the above?

Kind regards,

Michael
