|                                     |                |                                 |                                     |                           |                                                                                                                                                             |                                                                                            |
|-------------------------------------|----------------|---------------------------------|-------------------------------------|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------|
| Anemanelthe lessoniana              | Pheasant grass | Semi evergreen ornamental grass | 2L                                  | 3 per sqm for approx 3sqm | In spring, tease out dead foliage. Remove unwanted seedlings.                                                                                               | Wildlife interest. Seedheads provide food for finches and other seed-eating birds.         |
| cornus sanguinea 'Midwinter Fire'   | Dogwood        | Deciduous shrub                 | 2l or bare root dependent on season | 8 number                  | Prune all stems back to two buds in spring. This promotes young, new growth with good colour for interest in winter. This process is called stooling.       | Native. Berries provide food for birds.                                                    |
| Euphorbia amygdaloides var. robbiae | Spurge         | Evergreen perennial.            | 9cm pot                             | 19 number                 | Cut back faded flower stems in autumn. Wear gloves since the milky sap is a potential skin irritant. Remove unwanted seedlings each spring.                 |                                                                                            |
| Viburnum opulus                     | Guelder rose   | Deciduous shrub                 | 4l                                  | 3 number                  | Prune lightly at any time of the year. Water in dry periods. For rejuvenating pruning remove one third of branches to 30-40cm over a period of three years. | Native. Berries attract birds. Flowers attract hoverflies. Food for bees and caterpillars. |
