Dear Sirs,

Former Master Brewer Hotel, Hillingdon - Daylight/Sunlight Assessment

We refer to the above site and our daylight & sunlight report dated 3 October 2019 (the 'Report').

We have received and note the comments within the Lambert Smith Hampton letter dated 23 December 2019 (the 'Letter'). We have responded to these comments, below. Where necessary, we have made reference to our report dated 3 December 2018, which accompanied the previous planning application (the 'Previous Application').

Window Transmittance and Surface Reflectance

The Letter references analysis using values attributable to materials defined in our Report. The Letter correctly highlights that other materials might be used, particularly when analysing neighbouring properties (as internal finishes will be unknown). However, when considering their own development, it is appropriate for the applicant to consider the use of a variety of materials provided they use corresponding transmission/reflectivity values. Furthermore, the BRE Guide specifically references using alternative finishes to improve light and therefore we trust this approach is accepted.

Daylight

As referenced in the Letter, para. 4.11 of the Report clearly details the reasoning for our approach. This approach has been accepted by the London Borough of Hillingdon and other London Boroughs on many previous occasions and this method was accepted in the Previous Application. The approach focuses on rooms that are considered too small to be considered habitable and suitable for daylight and sunlight analysis. Many London Boroughs reference this size as c 13 - 15 sq m, we have used 13 sq m¹.

In terms of our focus on ADF as opposed to DD, this is a conventional approach when considering internal daylight. This is because ADF analysis provides a qualitative result. NSC/DD does not provide a qualitative result however - it only shows where sky can be seen in a room (which can be an incredibly small amount - such as the volume of sky visible through a keyhole). It is for this reason, amongst others, that ADF is most suitable for use. This approach has been accepted by the London Borough of Hillingdon and other London Boroughs on previous occasions. This method was the accepted in the Previous Application also.

¹ 13 sq m was also used in the September 2019 Graphite Square Appeal APP/N5660/W/18/3211223

Despite this, we have undertaken DD analysis to accompany the results provided in the Report, a copy is enclosed at Appendix A. As can be seen, 310 rooms fall short of the BRE Guide strict aspiration 80% (of room area). Out of these 224 are bedrooms - again, the BRE Guide states that daylight is less important to bedrooms. In dense urban environments, such as Hillingdon, the BRE Guide recommends the use of alternative targets. Alternative DD targets were provided in the Whitechapel Estate case². Using this target, it can be seen that just 21 living rooms and 65 bedrooms fall short. The majority of the shortfalls are at lower down the elevations (2nd and 3rd floor) to the central part of Building 4 where it faces the massing of Buildings 2 & 3. Whilst the BRE Guide states that daylight is less important to bedrooms, all rooms (including the bedrooms) can be seen to receive generally very good levels of daylight from a qualitative perspective, as evidence by the ADF analysis detailed within the Report.

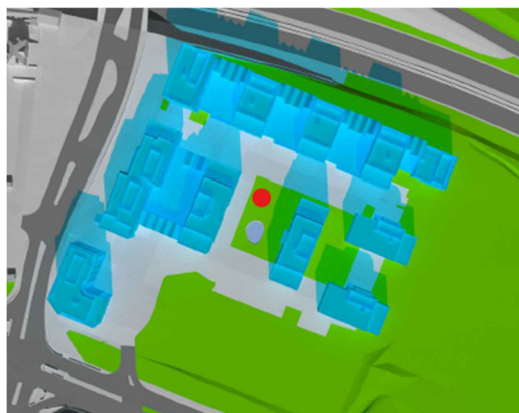

Sunlight

In accordance with the reporting format accepted in the Previous Application we have commented on window failures generally and have gone into more detail in terms of 'room' failures - with comment on the number of shortfalls etc. Our focus on room, rather than window shortfalls is because room results account for dual aspect nature of some rooms - providing a more realistic representation of the actual position. It is possible therefore that any difference between the Lambert Smith Hampton results and our own is down to this or because the model used differs from our own. It will be important to request this model so we can verify whether there are any shortfalls against our own.

The BRE Guide states that windows that face outside 90 degrees of due south need not be considered in terms of APSH - as they cannot expect to have a view of the sun. The reasons for the APSH shortfalls (despite being uniform) are provided within our Report. The shortfalls tend to be a result of windows being located further down the elevation, facing other massing and therefore having a low expectation of sun path visibility. A further issue contributing to the shortfalls is that many windows face 'close to' (but not beyond) 90 degrees from due South. This greatly compromises the likelihood of such windows having visibility of the sky where the sun path crosses thereby limiting APSH results.

Overshadowing

As can be seen from the image, below, the 12 noon image on the 12 March shows 'sun on ground' to the centre of the amenity area (red dot). This sun on ground continues for in excess of 2 hours, as can be seen from the comments and images in our Report.

² Acceptable DD levels were quoted as '50% of the room area' in the Whitechapel Estate Appeal Decision (see APP/E5900/W/17/3171437). This has since been echoed in the Granite Square Case.

We have also enclosed, at Appendix B, a 2 hour sun on ground test which shows that the scheme is fully compliant with the requirements of the BRE Guide (with 91% of the area achieving 2 hours of sun).

We trust that this letter is sufficient for your purposes. Should you have any queries in the meantime, please do not hesitate to contact us.

Yours faithfully

A handwritten signature in black ink that reads "Robinsons Surveyors Limited". The signature is written in a cursive, flowing style.
