DESIGN & ACCESS

The application to remove the existing brick built single storey rear extension and replace it with a two storey rear extension that matches the main unit. The new scheme falls on the principal footprint of the existing extension and therefore will not result in loss of parking or impact on turning vehicle movement within the site.

The new extension looks to provide cold storage of foods bought in and that to be distributed once produced.

This a sandwich factory with distributes sandwiches to local retailers and serves the airport.

In terms of access, the ground floor of the building wheelchair accessible and at present, proposals are for a lift in the main building are being considered.
