Coping Stones

Coping stones are supplied as plain-ended coping stones as standard. If you require terminal end, corner, horizontal or vertical curve coping stones then please contact your nearest Haddonstone Technical Department as standard designs will probably be available. Custom made coping stones can also be created.

Architectural cast stone coping designs include wall copings.

Coping requirements for straight flat runs of wall, curved wall sections, ramped walls, serpentine walls and stepped walls can be met from the standard range of wall coping. Haddonstone can custom manufacture cast stone

wall copings to individual specifications, sizes and profiles. Custom copings are

also suited to both brick walls and stone walls. For Haddonstone's standard lengths of cast stone copings, please refer to the Haddonstone price list.

All Haddonstone cast stone copings are supplied throated, although not necessarily to BS 5642: 1983 in certain applications. Haddonstone strongly recommend that you refer to Eurocode 6 and PD6697:2010
