

Dry Cast & Wet Cast Product Colours

Colour Matching Service

Amber Precast offer an integral Colour Matching & Reproduction Service to help you create the exact design aesthetics for your important building or construction project. This includes free advice and information from our Project Managers pertinent to colours, aggregates, pigments and textures and finishes. We offer...

- Professional Colour Matching
- Bespoke Solutions
- Fine control of aggregates during production
- Additional pigments (where applicable) to match any colour range reproduction
- Technical Colour Recipes created in our Amber Colour Laboratory to match your sample (recorded in-house)
- Colour Samples sent to you by post or hand delivered
- Free Account Management & Project Management Advisory Service available to discuss colour matching
- Advice on colours, pigments and textural finishes

Getting colours right

Whilst colour matching may seem like a simple subject, it is however quite complex and moreover, extremely important to your project and/or your client that the best colour match is achieved.

Due to the many different variables that affect colour matching through the use of calibration software on computer devices, we like to ensure you get the exact colour replication you seek by offering a professional Colour Matching Service. This usually means either sending a sample for a standard colour or creating a bespoke recipe especially for your project. Once the samples are created, we can either send them to you to take to site or show to your client or combine their delivery, with a personal visit from a Amber Precast Project Manager, allowing you to have a face to face discussion about your finite colour requirements.

Standard & Bespoke Colours

Below is our range of the 'Standard' colours for dry cast products. We can of course, provide colour matching for a vast array of hues and we are happy to provide a colour match to existing natural or cast stonework as well as bespoke custom colours and pigmentation. Colour ranges and finishes vary between product types and we highly recommend you make full use of our [Colour Matching Advice Service](#).
