General properties: Flemish Antique

100% natural resources

The raw materials are excavated in Weichsel loam layers, the local loam of Aeolian origin dating from the Ice Age. This löss mainly consists of a silt-like fraction, suited ideally for the manufacturing of hand form bricks. By using specific sand types for surface covering, the desired colour is achieved.

Texture

Stock brick

Facing bricks with a sanded-coated and grained structure.

Colour

Shade: multi

Base colour: red

Additional colours: brown, white, beige, black

Colour description

red-brown-white-beige-anthracite multi-coloured

Available as

- Brick
- Brick slip
- Eco-brick slip

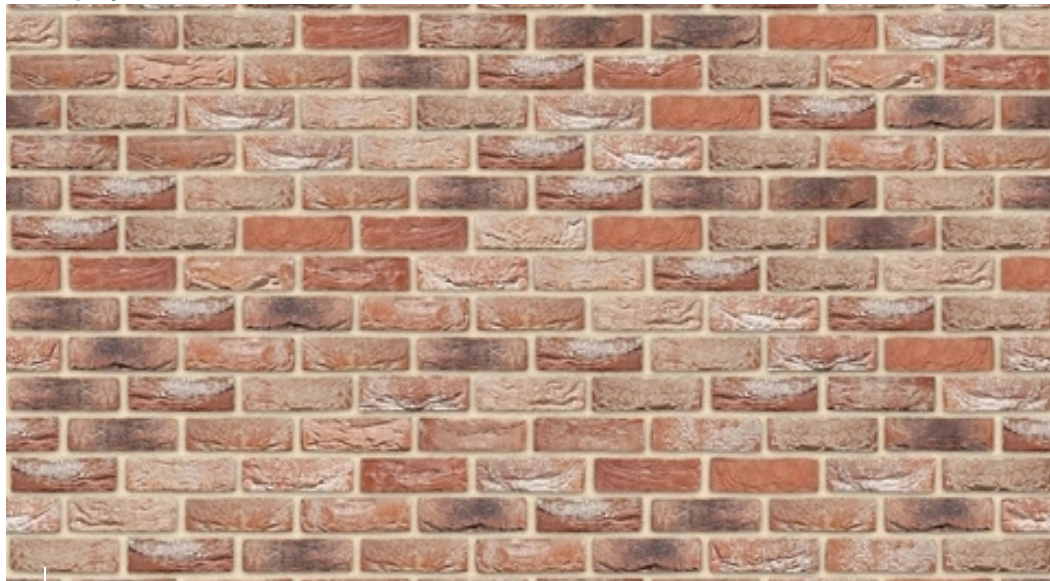

Sizes & variants

Joints

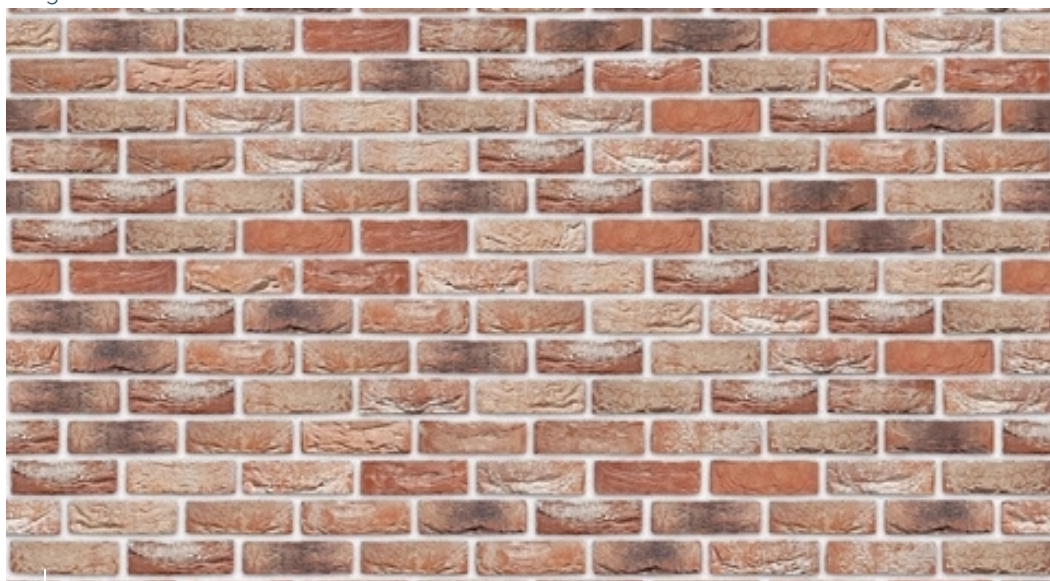

Available sizes

A high-resolution image showing a close-up of a brick wall. The bricks are rectangular and laid in a traditional running bond pattern. The color of the bricks is multi-toned, ranging from deep red to light beige, with some darker, almost black, spots. The surface of the bricks has a rough, textured appearance, consistent with the "sanded-coated and grained structure" mentioned in the text.
