Hip to gable roof extension

Consider extended roof from end of existing ridge

$$4.1 \times 3.3 = 13.5 \times 4.1 = 55.3\text{m}^3$$

Deduct volume of existing hip end (half pyramid)

$$8.2 \times 8.2 \times 3.3 = 221.8 / 3 = 73.9 / 2 = 36.9\text{m}^3$$

$$\text{Volume of each hip to gable roof extension } 55.3 - 36.9 = 18.4\text{m}^3$$

$$\text{Total volume of hip to gable roof extensions } 18.4 \times 2 = 36.8\text{m}^2$$
