8th July 2022

Our Ref.: 19623/LR/V/CS

Dear Sandy

Re: Land adjacent to 1 St Helen Close, Cowley, Hillingdon UB8 3RS

Following presentation and acceptance of Soils Limited RMS and Appraisal Ref: 19160/RMS/LR dated 12th March 2021, Soils Limited have been further commissioned to provide validation and verification of compliance with the RMS by the Client during the development of the site.

This validation and verification procedure undertaken in line with current UK guidance, follows the methodology outlined in the initial RMS which is enclosed as Appendix 1 for reference. The RMS notes specific reliance on the following documents produced by Soils Limited and to which reference should be made to ensure continuity of process:

- Preliminary Investigation Report (Soils Limited, Report ref: 18255/PIR, November 2020)
- Main Investigation Report (Soils Limited, Report ref: 18255/MIR, December 2020)

The site location plan is noted in Appendix 1 within the RMS and in the above noted documents.

Remediation Strategy

The agreed Remediation Strategy was to comprise removal of unsuitable materials in identified high risk garden areas and replacement to 450mm minimum depth with Subsoil and Certified Topsoil. Gas and water risks requiring remediation had already been discounted, but a Discovery Strategy was to be emplaced throughout the works.

Validation Requirements

These were noted on Page 3 of the RMS (19160/RMS/LR) and can be summarised as:

- Imported materials in garden areas to be proven to be sufficient thickness, suitable and fit for purpose
- Certification to be acquired for all imported soil materials prior to importation to confirm suitability
- Provision of summary and details of materials removed from and imported onto site
- Confirmation of any net changes in site levels as a result of development
- Confirm Discovery Strategy in place – if not acted upon a statement to this effect will be required from the groundworker and/or developer or Client

Soils Limited is a limited company registered in England and Wales number 1612073. VAT number 318273558

Registered Office: Newton House, Cross Road, Tadworth, Surrey KT20 5SR

Evidence Provided

Details regarding thickness of emplacement have been provided by the Client in the form of Photographs of each identified location (Plots 1-5) a selection of which are included for reference as Appendix 2.

It is also noted, even though not specifically required by the RMS, geotextile sheet has been used to provide an additional break layer for added protection, this was confirmed as being suitable and fit for purpose by Soils Limited prior to installation.

The locations of the plots and emplacements are confirmed by the Horticultural Map approved by Planning in Appendix 3, which also provides evidence of the dimensions of the garden areas.

The imported materials were approved by Soils Limited as being suitable and fit for purpose prior to emplacement as noted in the certification provided in Appendix 4.

Topsoil was further specified in relation to procurement as requiring compliance with appropriate British Standards, as noted on (and confirmed by) the Topsoil Delivery Tickets enclosed in Appendix 5.

Using the information provided on the Horticultural Map (Appendix 3), the landscaped areas total 224m² and the RMS required excavation to at least 0.45m in garden areas.

This therefore required a total of approximately 100m³ of ground to be removed and therefore 100m³ of new topsoil to be imported and emplaced.

The removal tickets provided by the Client (Appendix 6) approximate to 100m³ of material in ten loads.

These were legally disposed of as confirmed online (EA Licence register accessed July 2022) as having been undertaken by competent and licenced contractors in accordance with current UK waste guidance.

The Topsoil Delivery Tickets approximate to 131 tons of Topsoil which equates to roughly 0.75m per ton or the equivalent of 100m³ of imported materials.

This data confirms the materials balance across the site resulting in no net change to site levels. As such it can be confirmed that there have been no net level changes over the development.

A Discovery Strategy was emplaced during the entirety of the works and was not enacted as no unexpected and/or deleterious materials were encountered.

Formal confirmation of this by the Client and the person responsible for implementation on site of this policy and procedure is included as Appendix 7.

Soils Limited can also confirm that at no point during the development was it requested to provide professional data for, or respond to, queries regarding potential or actual activation of the Discovery Strategy.

Conclusions

On the basis of the information and evidence provided and its professional assessment of the same, Soils Limited are of the opinion that the RMS (19160/RMS/LR) has been suitably and appropriately complied with throughout the development in compliance with applicable UK legislation and guidance.

Soils Limited further consider that NFC Homes have provided sufficient evidence to establish and confirm compliance with the specific points noted and agreed in the RMS, examples of which have been included and provided as evidence in this report.

Soils Limited therefore conclude, validate and verify that in their professional opinion, compliance with the RMS has been achieved and that therefore no risk to previously identified receptors remains and further that the extant Planning Condition requirements have been complied with entire and can therefore be removed.

This report and the supporting evidence should be provided to the regulator to confirm compliance with validation and verification requirements and remove the extant condition.

If you have any further questions or comments regarding the above, please contact the undersigned.

Yours sincerely

Christopher Swainston BSc (Hons), PGCE, FGS, CGeol, CLAIre QP.

Dear Bho

Re: Land adjacent to 1 St Helen Close, Cowley, Hillingdon UB8 3RS

Following further comments from the regulator (Application Ref: 56865/APP/2020/459) in relation to the above site and investigations to date undertaken by Soils Limited (ref: 18255/PIR and 18255/MIR and to which reference and reliance is assumed), Soils Limited was commissioned to undertake an options appraisal with the Client and their advisors to confirm the remediation strategy to be adopted in this case for presentation to the regulator for agreement.

Background

Following on from investigations at the site undertaken by Soils Limited, the Client has requested presentation of an appraisal and strategy to resolve the potential issues to human health identified in the reports in relation to a singular Lead exceedance in a proposed garden area. The report (Soils Limited 18255/MIR dated December 2020) detailed several options that could be explored to resolve this issue and the conclusions of the appraisal undertaken between the Client and their advisors are detailed below.

Copies of the site Location Plan / Aerial Photograph with sample locations are enclosed for reference:

Soils Limited is a limited company registered in England and Wales number 1612073. VAT number 318273558

Registered Office: Newton House, Cross Road, Tadworth, Surrey KT20 5SR

Appraisal

Various options were presented for discussion in the Soils Limited Report as noted, and following presentation of that report and consideration of the options therein, a decision on the optimal remediation methodology was agreed. It was determined by the Client and their advisors on appraisal that the following issues and goals were of most significance in concluding their strategy.

Sustainability, Compliance with current guidance and regulations and Cost Effectiveness were determined as the main goals of the appraisal process and the following items were considered the key determinants in reaching their decision:

1. Lack of significant systematic risk (shallow depth 400mm single marginal exceedance in one sample – Lead 231mg/kg)
2. Potential “Hotspots” of Lead and other deleterious materials may still be present in Made Ground
3. Site relatively small and garden/green areas limited
4. Site clearance, levelling and foundation groundworks will require removal of materials as wastes as part of the site MMP
5. The material to be removed is not defined hazardous as waste and could be re-used or recycled on other sites
6. The extant material on site is probably not suitable as garden or growing material and would not comply with UK Topsoil Standards or be in compliance with NHBC guidance for garden areas
7. Garden soils should comprise 450mm of clean suitable and fit for purpose verified, certified and validated material to ensure compliance
8. As some materials will remain below hard standing but not present a significant risk – no pathway to human health very low leachability – and materials are to be removed as groundworks, no additional testing of final levels is considered necessary
9. In light of the shallow depth, planned removal and replacement and low levels noted, no barrier is required (BRE guidance on cover system suggests < 300mm actually required if subsoil remains)
10. The works will be subject to appropriate validation and verification on completion or during the works as appropriate subject to compliance with appropriate remediation guidance
11. A Discovery Strategy will be emplaced during the works

Remediation Strategy Methodology

On the basis of the above considerations and appraisal, a strategy has been determined which should achieve the noted goals. In summary, the proposed “remedial” works are to comprise:

- Removal of all materials in garden space and open areas (see Appendix A Garden and open Space Locations) to a level of at least 450mm below the final ground level on completion
- Materials below proposed hard standing and buildings will be removed as required during groundworks to allow the development to proceed and levels retained
- A discovery strategy will be in place throughout the process and enacted where appropriate
- Services will be appropriately protected in agreement with the appropriate regulator
- Suitable certified materials will be emplaced in all garden and open space areas to return the site to level and be of (at least) 450mm in thickness/depth

As required by current guidance, the above shall be subject to validation and verification to confirm compliance. This will include but not necessarily be limited to:

- Imported materials in garden areas to be proven sufficient thickness, suitable and fit for purpose by Client, regulator or third part as appropriate
- Certification to be acquired for all imported soil materials prior to importation to confirm suitability
- Provision of summary and details of materials removed from and imported onto site (required by MMP)
- Confirmation of any net changes in site levels as a result of development
- Confirm Discovery Strategy in place – if not acted upon a statement to this effect will be required from the groundworker and/or developer or Client
- Presentation of a validation report to the regulator confirming all works undertaken as agreed with appropriate evidence of compliance – photographs, documents, tickets, plans, statements, certificates, etc.

The precise details regarding practical application of the above strategy and validation are not and cannot be confirmed in terms of precise volumes to be removed and/or imported onto site, dates on which these actions could occur, details regarding sources of or locations for disposal of materials, number of validation samples to be taken, etc. As with all development works, this will vary depending on any further specific material findings during groundworks, site plans, instructions and any noted regulatory or guidance requirements.

However, these considerations will be recorded, detailed and discussed as part of the validation and verification process in line with current guidance and in consultation with any and all appropriate parties and regulators.

For imported materials as a guide, analysis should be once per 250m³ if the materials are well known (i.e. pre-certified) and one for each separate source with a minimum of 3 samples. Analysis should be for a general screening suite including typical contaminants as per the previous investigations i.e. asbestos, metals, semi-metals and hydrocarbons. Materials shall be considered suitable and fit for purpose by default if they do not exceed agreed screening values as appropriate to the end use and as required by the regulator. Example screening values may include the soil guideline values for residential with plant uptake as noted in the Soils Limited MIR report 18255/MIR Appendix C.3.

If you have any further questions or comments regarding the above, please contact the undersigned.

Yours sincerely

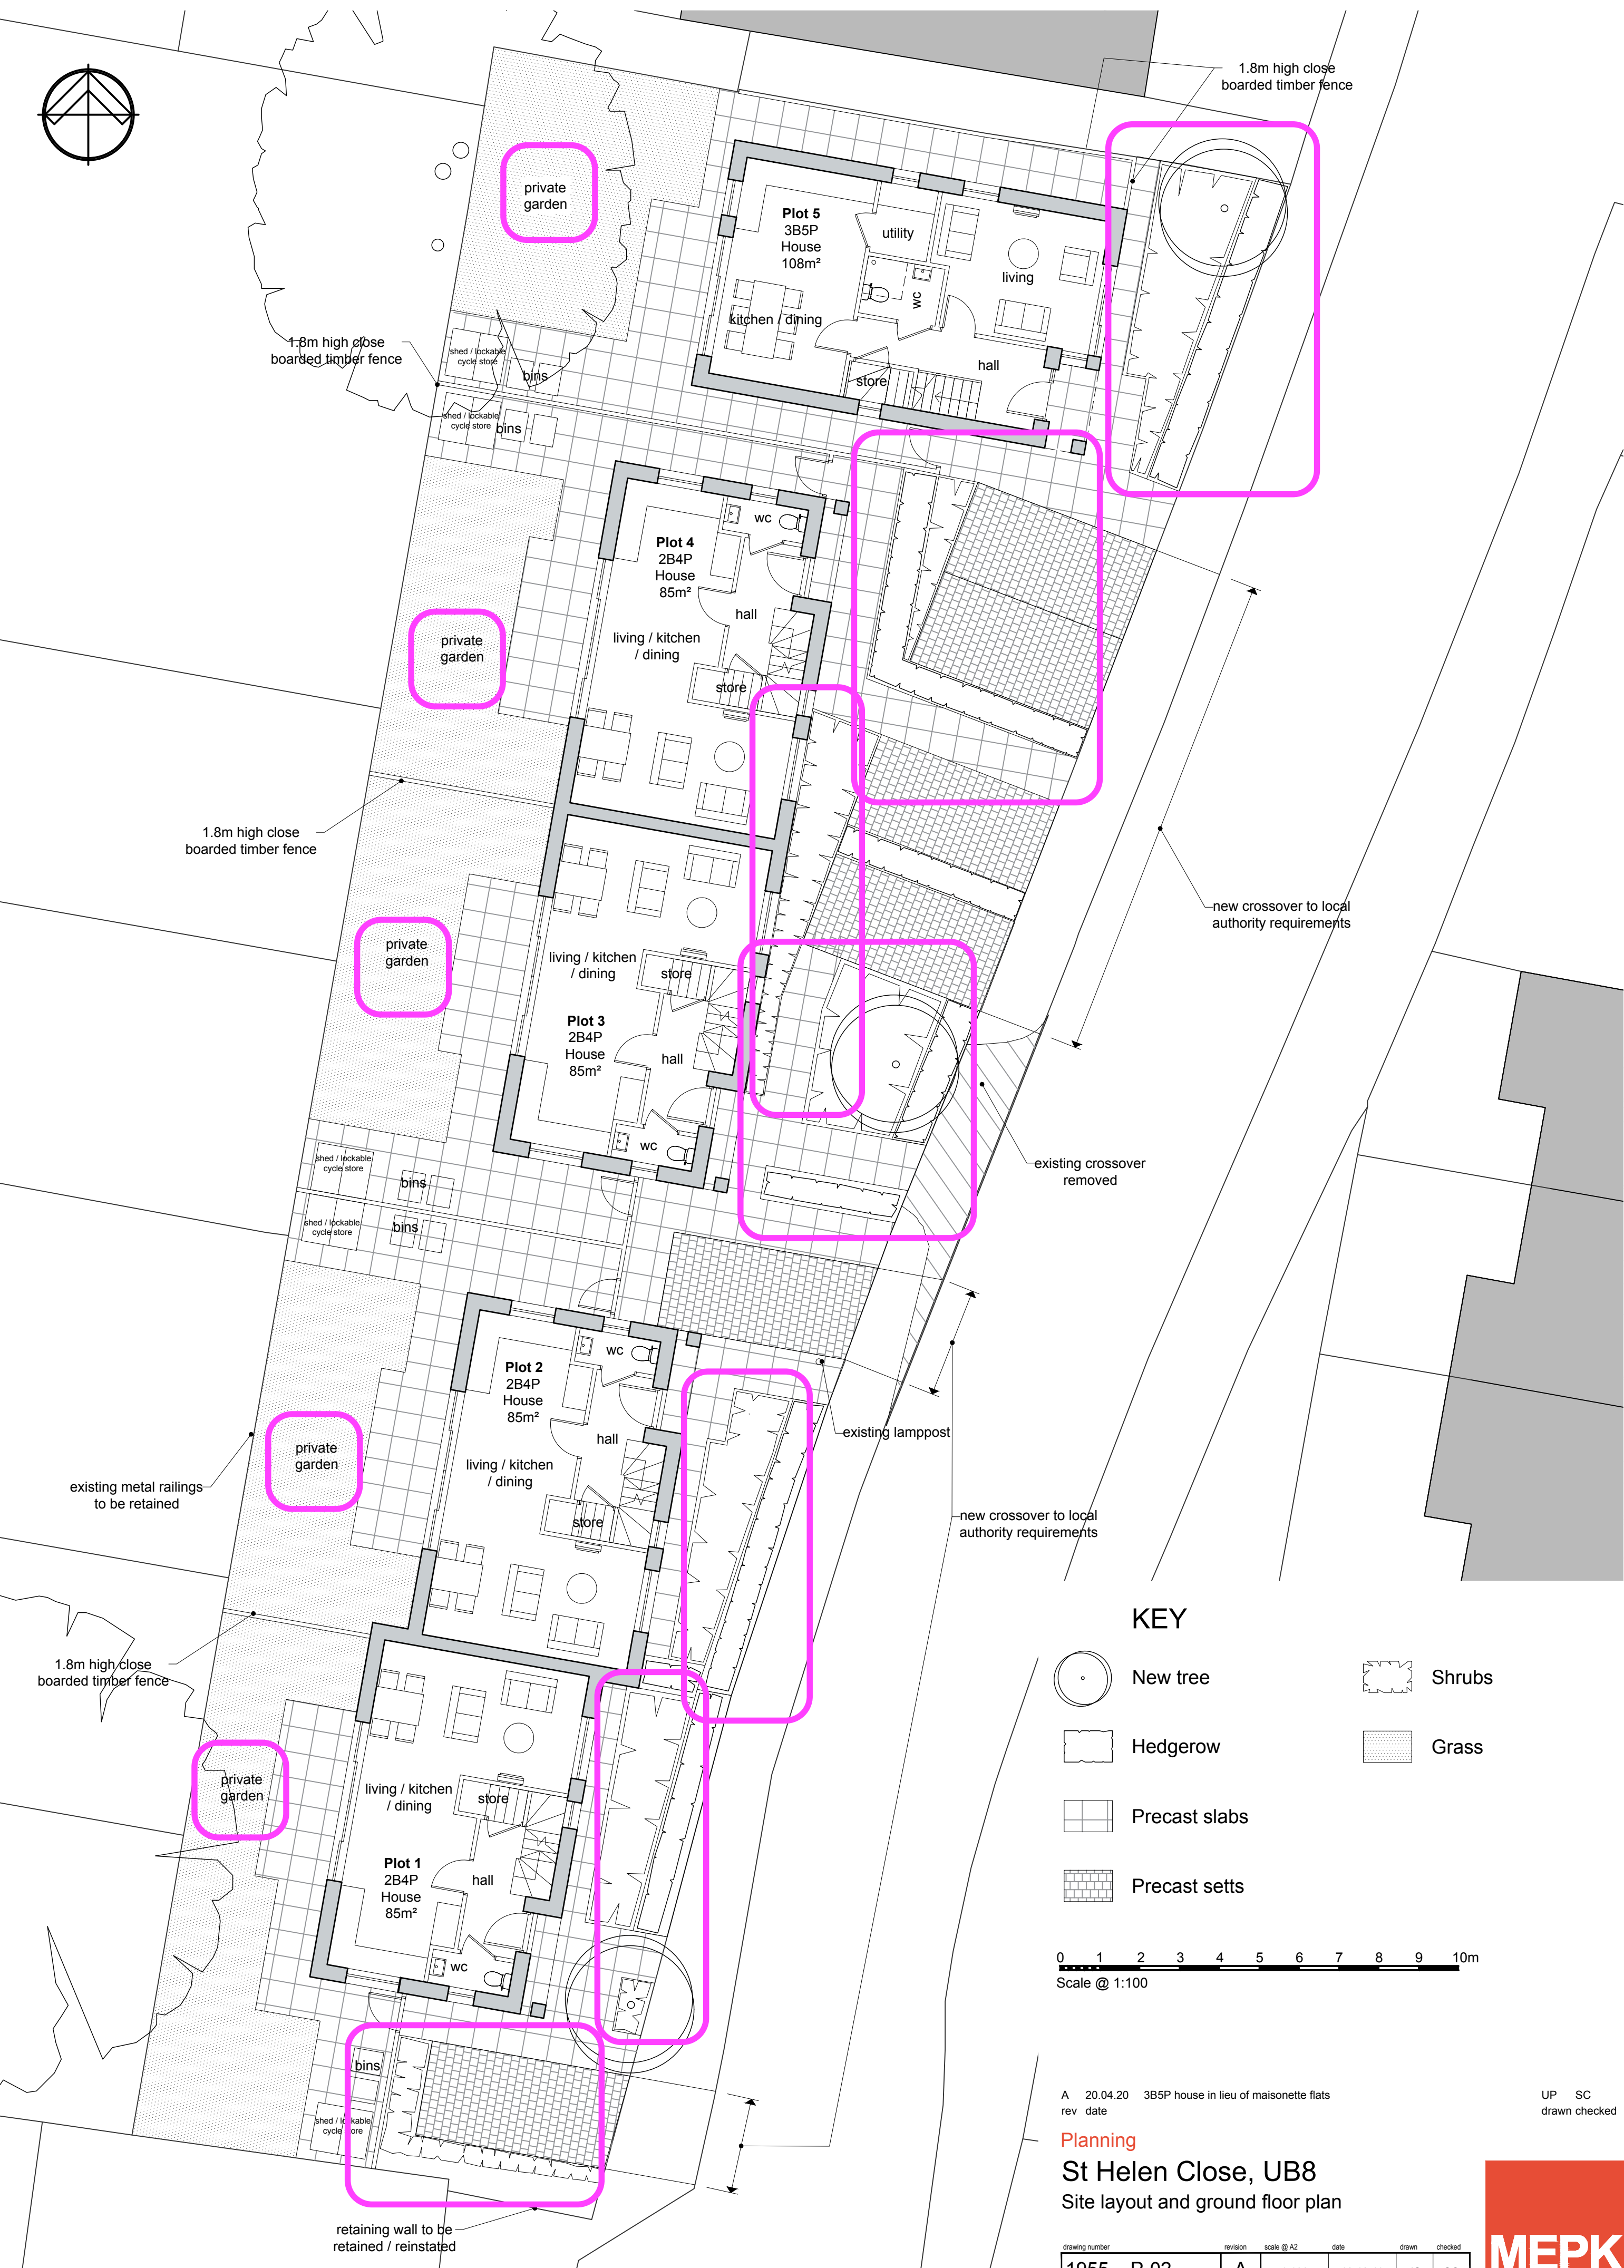

Christopher Swainston BSc (Hons), PGCE, FGS, CGeol, CLAIR QP.

2260	Carbonate	Carbonate	Titration
2300	Cyanides & Thiocyanate in Soils	Free (or easy liberatable) Cyanide; total Cyanide; complex Cyanide; Thiocyanate	Alkaline extraction followed by colorimetric determination using Automated Flow Injection Analyser.
2400	Cations	Cations	ICP-MS
2420	Phosphate	Phosphate	Spectrophotometry - Discrete analyser
2450	Acid Soluble Metals in Soils	Metals, including: Arsenic; Barium; Beryllium; Cadmium; Chromium; Cobalt; Copper; Lead; Manganese; Mercury; Molybdenum; Nickel; Selenium; Vanadium; Zinc	Acid digestion followed by determination of metals in extract by ICP-MS.
2490	Hexavalent Chromium in Soils	Chromium [VI]	Soil extracts are prepared by extracting dried and ground soil samples into boiling water. Chromium [VI] is determined by 'Aquakem 600' Discrete Analyser using 1,5-diphenylcarbazide.
2620	LOI 440	LOI 440 Trommel Fines	Determination of the proportion by mass that is lost from a soil by ignition at 440°C.
2680	TPH A/A Split	Aliphatics: >C5–C6, >C6–C8,>C8–C10, >C10–C12, >C12–C16, >C16–C21, >C21–C35, >C35– C44Aromatics: >C5–C7, >C7–C8, >C8– C10, >C10–C12, >C12–C16, >C16– C21, >C21– C35, >C35– C44	Dichloromethane extraction / GCxGC FID detection
2700	Speciated Polynuclear Aromatic Hydrocarbons (PAH) in Soil by GC-FID	Acenaphthene; Acenaphthylene; Anthracene; Benzo[a]Anthracene; Benzo[a]Pyrene; Benzo[b]Fluoranthene; Benzo[ghi]Perylene; Benzo[k]Fluoranthene; Chrysene; Dibenz[ah]Anthracene; Fluoranthene; Fluorene; Indeno[123cd]Pyrene; Naphthalene; Phenanthrene; Pyrene	Dichloromethane extraction / GC-FID (GC-FID detection is non-selective and can be subject to interference from co-eluting compounds)
2760	Volatile Organic Compounds (VOCs) in Soils by Headspace GC-MS	Volatile organic compounds, including BTEX and halogenated Aliphatic/Aromatics.(cf. USEPA Method 8260)*please refer to UKAS schedule	Automated headspace gas chromatographic (GC) analysis of a soil sample, as received, with mass spectrometric (MS) detection of volatile organic compounds.
2920	Phenols in Soils by HPLC	Phenolic compounds including Resorcinol, Phenol, Methylphenols, Dimethylphenols, 1-Naphthol and TrimethylphenolsNote: chlorophenols are excluded.	60:40 methanol/water mixture extraction, followed by HPLC determination using electrochemical detection.

Report Information

Key

U	UKAS accredited
M	MCERTS and UKAS accredited
N	Unaccredited
S	This analysis has been subcontracted to a UKAS accredited laboratory that is accredited for this analysis
SN	This analysis has been subcontracted to a UKAS accredited laboratory that is not accredited for this analysis
T	This analysis has been subcontracted to an unaccredited laboratory
I/S	Insufficient Sample
U/S	Unsuitable Sample
N/E	not evaluated
<	"less than"
>	"greater than"
SOP	Standard operating procedure
LOD	Limit of detection

Comments or interpretations are beyond the scope of UKAS accreditation

The results relate only to the items tested

Uncertainty of measurement for the determinands tested are available upon request

None of the results in this report have been recovery corrected

All results are expressed on a dry weight basis

The following tests were analysed on samples as received and the results subsequently corrected to a dry weight basis TPH, BTEX, VOCs, SVOCs, PCBs, Phenols

For all other tests the samples were dried at < 37°C prior to analysis

All Asbestos testing is performed at the indicated laboratory

Issue numbers are sequential starting with 1 all subsequent reports are incremented by 1

Sample Deviation Codes

- A - Date of sampling not supplied
- B - Sample age exceeds stability time (sampling to extraction)
- C - Sample not received in appropriate containers
- D - Broken Container
- E - Insufficient Sample (Applies to LOI in Trommel Fines Only)

Sample Retention and Disposal

All soil samples will be retained for a period of 30 days from the date of receipt

All water samples will be retained for 14 days from the date of receipt

Charges may apply to extended sample storage

If you require extended retention of samples, please email your requirements to:

customerservices@chemtest.com

1st July, 2022

By Email Only

Dear Chris,

Re: Land Adjacent to 1 St Helen Close, Cowley, Hillingdon, UB8 3RS – Discovery Strategy

I am writing with regards the above site of five houses, which we have recently build under Planning Application 56865/APP/2020/459.

This letter provides confirmation that NFC Homes Limited undertook a Discovery Strategy throughout the construction works. Inspections of the works were undertaken daily throughout by our Site Manager, Adrian Cristea, and no unexpected contamination was discovered at any stage.

If you require any further information, please do get in touch.

Yours sincerely,

A handwritten signature in black ink, appearing to read 'S. Sutherland'.
