CONTAMINATED LAND RISK ASSESSMENT

PHASE 1 DESK TOP STUDY– PRELIMINARY RISK ASSESSMENT

**67 Horton Road
West Drayton**

A report prepared on behalf of **Soil Environment Services** by:

Louise Tavasso BSc (Hons)
Environmental Consultant

Approved by:

Dr Robin S Davies BSc PhD MISOilSci PGC *Contaminated Land Management*
Managing Director

This report has been prepared by Soil Environment Services with all reasonable skill, care and diligence, within the terms of The Contract with The Client. The report is the property of The Client who can assign this report to any third party who will then be afforded the same assurances as detailed within the terms of the original Contract with The Client.

TABLE 3 Initial Conceptual Site Model

EXECUTIVE SUMMARY

Current site conditions	Residential dwellings most recently used for office space occupy the site to the east, with a hard-standing parking area to the west.
Proposal	The proposal is for residential development (nine C3 units). No planning application was available for viewing at the time of report completion.
Adjacent site conditions	Residential dwellings bound the site to the north and west, with roads to the east and south.
Site history	The site was mapped as undeveloped until the construction of residential dwellings c.1985. The composition of the buildings on site changed c.1965.
Geology	Langley Silt Member - Clay and Silt over London Clay Formation - Clay, Silt and Sand.
Hydrogeology	The site is on an Unproductive Superficial and Bedrock aquifer and is not in a groundwater source protection zone.
Hydrology	Surface water is expected to flow to the north. No surface water is mapped within 500 m down-gradient of the site.
Potential sources and contaminants	Potentially elevated soil metal concentrations possibly exist on the site.
Conclusions	Elevated concentrations of lead are mapped on the site (300->600 mg/kg) which exceed the current residential guideline values of 82-210 mg/kg and metals from on and on and off-site sources may pose a potential risk in any landscaped/garden areas. Some testing to determine actual concentrations or remedial actions are considered to be necessary.

1. INTRODUCTION AND OBJECTIVES

1.1 Introduction

The purpose of this assessment is to examine specifically the current and potential risks to human, ecological and ground and surface water receptors associated with possible contamination of the ground at the site located at:

67 Horton Road
West Drayton
UB7 8ET

OS Grid Ref: 506286, 180269

The proposal is for residential development (nine C3 units). No planning application was available for viewing at the time of report completion.

1.2 Objectives

The primary objective of this risk assessment is to assess potential contamination sources, the pathways which these could possibly take through the environment and then the effects on likely receptors. A preliminary Conceptual Site Model (CSM) has been developed and evaluation of the risks is given. Subsequently, if needed, recommendations are made with regard to further (Phase 2) investigation and/or remediation.

2. SITE CHARACTERISATION

2.1 Current setting and condition (Drawing 1)

The site assessed for this investigation currently comprises 0.04 ha of land located on Horton Road, West Drayton. Residential dwellings bound the site to the north and west, with roads to the east and south (Photo 1). Residential dwellings most recently used for office space occupy the site to the east, with a hard-standing parking area to the west (Photos 2 & 3). The topography of the land on the site slopes down to the north.

PHOTO 1 Aerial view

PHOTO 2 View SW to NE – source: Google Streetview 2016

PHOTO 3 View NE to NW – source: Google Streetview 2014

2.2 Former investigations and consultations

No former investigations in relation to contamination have been undertaken for the site.

An Officers Report undertaken for the site informs:

The proposed site comprises an area of land to the rear of 67 Horton Road, which is a detached two-storey building at the junction of Horton Road and Colham Avenue. That building has been in use as offices although it has a prior approval for change to two residential units which does not appear to have been implemented yet, although it appears that building work is in progress. The building is prominent, which is further emphasised by the distinct change in level, which drops from the front to the rear. The lower level is reached by steps from Horton Road and direct from Colham Avenue. There is a car parking area on Horton Road, to the side of the building. The lower area at the rear is generally open with a small storage shed at the rear. There is landscaped screening to the boundary with Nos. 57/59 Horton Road which are two storey dwellings fronting onto Horton Road. Horton Road is mixed in character but is largely residential at this point. In Colham Avenue the site is flanked by the side elevations and rear gardens of two-storey dwellings. Colham Avenue has extensive formal tree planting within a central area between the two one way streets that comprise the road itself. Those trees shade the application site in the morning at present.

2.3 Relevant planning history for the site.

6800/APP/2017/1366	Two storey, 2-bed detached dwelling with associated parking and amenity space and installation of vehicular crossover to front.
6800/APP/2016/1801	Change of use from offices (Use Class B1) to to provide 2 x 1-bed self contained flats (Use Class C3) (Prior Approval)
6800/APP/2015/3329	Two storey side/rear extension and change of use from office use (Use Class B1) to create 3 x 2-bed and 1 x 1-bed self contained flats with associated parking and amenity space (Use Class C3)
6800/L/92/0897	Erection of 2 metre high security fencing

2.4 Site history (see Historical maps – Appendix A)

A chronological list of potential sources of contamination and significant features on and surrounding the site considered relevant to the proposed development are outlined below (Table 1).

TABLE 1 Significant features on the historical maps

Land use	Direction	Distance (m)	Notes
On-site			
Undeveloped land (pre-1878)	On-site	0	<i>indicative of residential dwellings</i>
Unmarked buildings (1895)	On-site	0	
Off site			
Rail lines (pre-1878-current)	S	186	<i>mapped as residential by 1990</i>
Gravel pit (pre-1878-1895)	SW	214	
Oil works (pre-1871-1895)	W	221	
Cement works (1895-1914)	SW	8	
Pumping station/works (1914-c.1988)	S	43	
Allotment gardens (1935-1988)	SE	72	
Works (1966-current)	SW	76	
Coal yard (1966-c.1985)	N	164	
Works (1966-current)	SE	201	

2.5 Soils, geology and hydrology

BGS maps indicate that the site is located on:

Superficial geology

1:50 000 scale superficial deposits description: Langley Silt Member - Clay and Silt. Superficial Deposits formed up to 2 million years ago in the Quaternary Period. Local environment previously dominated by wind-blown deposits.

Lynch Hill Gravel Member - Sand and Gravel geology bounds the site to the east.

Bedrock geology

1:50 000 scale bedrock geology description: London Clay Formation - Clay, Silt and Sand. Sedimentary Bedrock formed approximately 48 to 56 million years ago in the Palaeogene Period. Local environment previously dominated by deep seas.

A BGS listed borehole log (Ref: TQ08SE8) mapped 150 m north-west and within the same strata as mapped for the site informs of clay drift deposits over London Clay at 5.05 m bgl.

Hydrology

Flow to groundwater may be restricted due to the low permeability strata mapped on the site.

Surface water is expected to flow to the north. No surface water is mapped within 500 m down-gradient of the site.

The site is on an Unproductive Superficial and Bedrock aquifer and is not in a groundwater source protection zone.

2.6 Environmental data search

Environmental data (Appendix B) indicates the following:

- The site is situated on an Unproductive Superficial and Bedrock aquifer and is not in a groundwater source protection zone.
- No Contaminated Land Register Entries and Notices within 1000 m.
- No pollution incidents within 250 m.
- No landfill sites within 650 m.
- No waste treatment, management or disposal sites are mapped within 700 m.
- No fuel station entries within 440 m.
- The property is in a lower probability radon area (less than 1% of homes are estimated to be at or above the Action Level). No radon protective measures are necessary in the construction of new dwellings or extensions.
- No contemporary trade directory entries are listed for the site or within a 48 m radius.
- Potentially infilled land is mapped on and within a 250 m radius of the site:
 1. On site (water). Date of mapping:1900.
 2. 15 m south-east (water). Date of mapping:1900.
 3. 223 m south-west (non-water). Date of mapping:1990.
- The Urban Soil Chemistry maps (Appendix B) indicate potentially elevated lead concentrations (300-600 mg/kg – residential guidelines 82-210 mg/kg) are mapped on the site (Figure 1).

FIGURE 1 – Mapped lead concentrations

3. INITIAL CONCEPTUAL SITE MODEL

The initial conceptual site model detailed here is by a written and tabular description of the sources, pathways and receptors. A cross section or diagram is only added if this will aid in understanding the conceptual site model.

Model summary

The site is situated on a low vulnerability groundwater zone. No significant potential sources of contamination are considered to exist on the site other than the mapped elevated concentrations of lead. Pathways (direct soil and dust ingestion and/or inhalation) to future residents are considered to exist via proposed soft landscaping/garden areas. The residents will be the main receptors on site. No other significant potential contamination sources are considered to be present on or within a significant distance of the site.

3.1 Potential sources

A review of the historical maps (Appendix A) and other information has identified that no significant sources of contamination relevant to the proposal are considered to exist on the site other than the mapped potentially elevated concentrations of lead (Table 2).

TABLE 2 Possible source locations and potential contaminants

Land use	Direction	Distance (m)	Potential Contaminants
On-site			
Mapped lead concentrations	On-site	0	300-600 mg/kg lead concentrations are mapped which exceed residential guideline values
Made ground (fomer buildings)	On-site	0	Metals
Parked vehicles	On-site	0	Hydrocarbons
Mapped infilled (water) infilled by 1900	On-site	0	Methane, carbon dioxide
Off site			
Rail lines (pre-1878-current)	S	186	Metals, hydrocarbons
Gravel pit (pre-1878-1895)	SW	214	Methane, carbon dioxide
Oil works (pre-1871-1895)	W	221	Metals, hydrocarbons, solvents, inorganic compounds
Cement works (1895-1914)	SW	8	Metals, hydrocarbons, solvents, inorganic compounds
Pumping station/works (1914-c.1988)	S	43	Metals, hydrocarbons, pathogens
Allotment gardens (1935-1988)	SE	72	Pesticidesm herbicides, hydrocarbons
Works (1966-current)	SW	76	Metals, hydrocarbons, solvents
Coal yard (1966-c.1985)	N	164	Metals, hydrocarbons
Works (1966-current)	SE	201	Metals, hydrocarbons
Infilled ground (1900)	SE	15	Methane, carbon dioxide
Infilled ground (1990)	SW	223	Methane, carbon dioxide

3.2 Receptors

Humans

- Residents in the proposed dwellings.
- Residents in adjacent properties.

Controlled Waters

- The site is on an Unproductive Superficial and Bedrock aquifer and is not in a groundwater source protection zone.

Ecology

- Animals and plants are considered to be possible receptors.

Buildings and services

- Underground pipes and foundations.

3.3 Pathways and plausible pollutant linkages (See Table 3)

Pathways to and from the site could exist via service channels and horizontal flow within the soils mapped on and adjacent to the site.

Human health

1. Ingestion of soil
2. Ingestion of dust
3. Ingestion of contaminated vegetables/fruit
4. Ingestion of soil attached to vegetables/fruit
5. Dermal contact with soil
6. Dermal contact with dust
7. Inhalation of fugitive soil dust
8. Inhalation of fugitive dust
9. Inhalation of vapours outside
10. Inhalation of vapours inside
11. Ingress to water supplies is also considered
12. Ingress and accumulation of methane

Controlled Waters

Flow to groundwater may be restricted due to the low permeability strata mapped on the site.

Surface water is expected to flow to the north. No surface water is mapped within 500 m down-gradient of the site.

The site is on an Unproductive Superficial and Bedrock aquifer and is not in a groundwater source protection zone.

The identified potential contaminants(sources) and receptors have been considered in relation to pathways that may link them (Table 3 and Appendix C):

TABLE 3 – Initial Conceptual Site Model (see Appendix C)

Potential source	Potential contaminants of concern	Plausible pathway	Potential receptor	Probability	Severity	Risk	Justification	Risk classification
ON-SITE								
Mapped lead concentrations	Lead	Direct soil and dust ingestion and/or inhalation	Humans (site users)	Likely	Medium	Moderate	Should the mapped concentrations exist, a pathway will be created during the implementation of garden and landscaped areas for the proposed residential development	Moderate
Made ground	Metals	Direct soil and dust ingestion and/or inhalation	Humans (site users)	Likely	Medium	Moderate	Residual contamination may be present from possible made ground materials	Moderate
Parked vehicles	Hydrocarbons	Indoor inhalation, direct soil and dust ingestion and/or inhalation	Humans (site users)	Unlikely	Medium	Low	Hard-standing parking area and superficial geology restricting any minor leaks or spillages	Low
Infilled ground (pre-1900)	Methane, carbon dioxide	Indoor inhalation	Humans (site users)	Unlikely	Medium	Low	Given the time since infill (1900), natural attenuation is expected to have occurred	Low

Continued....

OFF-SITE								
Current rail lines, former oil works, former allotments and current works 76 m south-west and 201 m south-east	Metals, hydrocarbons, solvents, inorganic compounds	Indoor inhalation, direct soil and dust ingestion and/or inhalation following any movement through the strata	Humans (site users)	Unlikely	Medium	Low	Distance and geology restricting pathways to the site	Low
Former coal yard	Metals, hydrocarbons	Indoor inhalation, direct soil and dust ingestion and/or inhalation following any movement through the strata	Humans (site users)	Unlikely	Medium	Low	Distance, geology and topography restricting pathways to the site	Low
Former cement works (pre-1914)	Metals, hydrocarbons, solvents, inorganic compounds	Indoor inhalation, direct soil and dust ingestion and/or inhalation following any movement through the strata	Humans (site users)	Low likelihood	Medium	Moderate/low	Possible migration of metals however the mapped geology is considered to help restrict pathways. Natural attenuation and dispersion of contaminants expected to have occurred. Redevelopment into residential is expected to have addressed any significant issues	Moderate/low
Former pumping station and works	Metals, hydrocarbons, pathogens	Indoor inhalation, direct soil and dust ingestion and/or inhalation following any movement through the strata	Humans (site users)	Unlikely	Medium	Low	Distance and geology restricting pathways. Some natural attenuation and dispersion is expected to have occurred	Low
Former gravel pit (1895) and infilled land	Methane, carbon dioxide	Indoor inhalation following any movement through the strata	Humans (site users)	Unlikely	Medium	Low	Given the time since infill (1895, 1900), natural attenuation is expected to have occurred. Distance and geology for the infilled land mapped 223 m south-west (1990) is considered to restrict pathways	Low
Notes to table: * Given the length of time since in-fill, any potential gas generated during decomposition is likely to have peaked and be in decline. This information is based on the document prepared by CIRIA titled 'CIRIA C665 -Assessing risks posed by hazardous gases to buildings'. Section 7.2.5 (Figure 7.1), details that the landfill gas generation rate significantly reduces with the age of the waste. By 30 years, the rate of gas generation is insignificant, and by 50 years, the rate is minimal. Pathway: Classification of human exposure pathways (routes) from The CLEA model, Research and Development Publication CLR10. Probability and severity: Classification of Probability and Consequence from CIRIA C552 Contaminated land risk assessment, a guide to good practice 2001. Risk Classification from DETR Guidelines for Environmental Risk Assessment and Management, 2000								

4. RISK ASSESSMENT SUMMARY

4.1 Human health

A *moderate to moderate/low* potential risk exists from possible elevated soil metal concentrations from both the mapped lead and on and off-site sources.

4.2 Controlled Waters

A *low* risk to groundwater is considered to exist due to the geology mapped on the site restricting pathways to depth. Also, lead is considered not to be a risk driver for controlled waters due to its minimal solubility.

4.3 Ecology

A *low risk* is considered to exist as no significant receptors are considered to exist on or within a significant distance of the site. Hence no plausible pollutant linkages are present.

4.4 Buildings and services

A *low* risk is considered to exist as no significant quantities of aggressive substances (i.e. PAH's) which may affect the foundations or plastic/metal pipes of any buildings are considered to be present on the site.

5. UNCERTAINTIES AND RECOMMENDATIONS

Elevated concentrations of lead are mapped on the site (300-600 mg/kg) which exceed the current residential guideline values of 82-210 mg/kg. A possible risk also exists from metals from on and off-site sources. Pathways (direct soil and dust ingestion and/or inhalation) to future residents are considered to exist via proposed soft landscaping/garden areas.

Testing of the ground to confirm concentrations will be needed in soft landscaping/gardens or in lieu of this, remedial measures will need to be undertaken:

Remedial measure may include:

1. Removal of an agreed depth of ground in any proposed garden or landscaped areas. Imported fill will require certification or testing before placement. This testing should be undertaken either at source or following importation but prior to placement to determine that the fill is chemically suitable for use.
2. Any topsoil purchased should be in accordance with BS3882. In addition, materials imported to make up the cover system shall be demonstrated to be in compliance with BS: 8601 (Specification for Subsoil and Requirement for use) as well as chemically suitable for the proposed use with respect to the risk to human health.
3. Imported topsoil will be placed over a geotextile membrane.
4. If any soils are removed from the site, they will be disposed of to an appropriate landfill following Waste Acceptance Criteria testing.

Appropriate PPE should be worn by development workers and a watching brief should be conducted during development works. Should any significant made ground be encountered during development works or should any areas of odorous, abnormally coloured or suspected contaminated ground be encountered, an amended risk assessment of the development should be undertaken to determine whether further investigation or remedial works are necessary.

The Phase 1 Preliminary Risk Assessment will need to be submitted to the relevant authorities for their comments prior to any development works on site.

Risk consequence

Risk is regarded as being a combination of the likelihood of an ‘event’ occurring and its severity. Both elements must be considered when assessing risk. As defined in CIRIA C552:2001, the magnitude of the potential severity of risk occurring may be assessed against:

Consequence of Risk Being Realised (based on C552 CIRIA, 2001)

Consequence of risk being realised			
Classification	Category	Definition	Examples
Severe short-term (acute) risks only	Humans	Short-term (acute) risk to human health likely to result in "significant harm" as defined by the Environment Protection Act 1990, Part 2A.	High concentrations of cyanide on the surface of an informal recreation area.
	Controlled Waters	Short-term risk of pollution (note: Water Resources Act contains no scope for considering significance of pollution) of sensitive water resource.	Major spillage of contaminants from site into controlled water.
	Property	Catastrophic damage to buildings/property.	Explosion causing building collapse (can also equate to a short-term human health risk if buildings are occupied).
	Ecological System	A short-term risk to a particular ecosystem, or organism forming part of such ecosystem.	
Medium chronic (long-term) risks; "significant harm"	Humans	Chronic damage to Human Health ("significant harm" as defined in Defra 2006).	Concentrations of a contaminant from site exceed the generic, or site-specific assessment criteria
	Controlled Waters	Pollution of sensitive water resources (note: Water Resources Act contains no scope for considering significance of pollution).	Leaching of contaminants from a site into a major or minor aquifer.
	Ecological System	A significant change in a particular ecosystem	Death of a species within a designated nature reserve.
Mild chronic (long-term) risks; less sensitive receptors	Controlled Waters	Pollution of non-sensitive water resources.	Pollution of non-classified groundwater.
	Property	Significant damage to buildings, structures and services ("significant harm" as defined in Circular on Contaminated Land, Defra, 2006). Damage to sensitive buildings/structures/services	Damage to building rendering it unsafe to occupy (e.g., foundation damage resulting in instability)
	Ecological System	Significant damage to crops. Damage to the environment.	
Minor chronic (long-term) risks; mild	Financial / project	Harm, although not necessarily significant harm, which may result in a financial loss, or expenditure to resolve.	
	Humans	Non-permanent health effects to human health (easily prevented by means such as personal protective clothing, etc).	The presence of contaminants at such concentrations that protective equipment is required during site works.
	Property	Easily repairable effects of damage to buildings, structures and services	The loss of plants in a landscaping scheme. Discolouration of concrete.

Similarly, the classification of the magnitude of the probability of the risk occurring may be assessed against:

Probability of Risk Being Realised (C552 CIRIA, 2001)

Probability of risk being realised	
Classification	Definition
High Likelihood	There is a pollution linkage and an event that either appears very likely in the short term and almost inevitable over the long term, or there is evidence at the receptor of harm or pollution.
Likely	There is a pollution linkage and all the elements are present and in the right place, which means that it is probable that an event will occur. Circumstances are such that an event is not inevitable, but possible in the short term and likely over the long term.
Low Likelihood	There is a pollution linkage and circumstances are possible under which an event could occur. However, it is by no means certain that even over a longer period such event would take place, and is less likely in the shorter term.
Unlikely	There is a pollution linkage but circumstances are such that it is improbable that an event would occur even in the very long term.

The risk categories are summarised in the following table:

Risk Classification Matrix (C552 CIRIA, 2001)

Risk classification matrix					
(CIRIA C552, 2001, page 82)		Consequence			
		Severe	Medium	Mild	Minor
Probability	High Likelihood	Very High	High	Moderate	Moderate/Low
	Likely	High	Moderate	Moderate/Low	Low
	Low Likelihood	Moderate	Moderate/Low	Low	Very Low
	Unlikely	Moderate/Low	Low	Very Low	Very Low

Risk Classification Definitions (C552 CIRIA, 2001)

Risk classification definitions	
Very High	There is a high probability that severe harm could arise to a designated receptor from an identified hazard, OR, there is evidence that severe harm to a designated receptor is currently happening. This risk, if realised, is likely to result in a substantial liability. Urgent investigation (if not undertaken already) and remediation are likely to be required.
High	Harm is likely to arise to a designated receptor from an identified hazard. Realisation of the risk is likely to present a substantial liability. Urgent investigation (if not undertaken already) is required and remedial works may be necessary in the short term and are likely over the longer term.
Moderate	It is possible that harm could arise to a designated receptor from an identified hazard. However, it is either relatively unlikely that such harm would be severe, or if any harm were to occur it is more likely that the harm would be relatively mild. Investigation (if not already undertaken) is normally required to clarify the risk and to determine the potential liability. Some remedial works may be required in the longer term.
Moderate / Low	
Low	It is possible that harm could arise to a designated receptor from an identified hazard, but it is likely that this harm, if realised, would at worst normally be mild.
Very Low	There is a low possibility that harm could arise to a receptor. In the event of such harm being realised it is not likely to be severe.

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Supply of Unpublished Survey Information

Published 1974 - 1975

Source map scale - 1:1,250

SUSI maps (Supply of Unpublished Survey Information) were produced between 1972 and 1977, mainly for internal use at Ordnance Survey. These were more of a 'work-in-progress' plan as they showed updates of individual areas on a map. These maps were unpublished, and they do not represent a single moment in time. They were produced at both 1:2,500 and 1:1,250 scales.

Large-Scale National Grid Data
Published 1992
Source map scale - 1:1,250

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.
