Geotechnical & Environmental Associates Limited (GEA) disclaims any responsibility to the Client and others in respect of any matters outside the scope of this work. This report has been prepared with reasonable skill, care and diligence within the terms of the contract with the Client and taking account of the manpower, resources, investigation and testing devoted to it in agreement with the Client. This report is confidential to the Client and GEA accepts no responsibility of whatsoever nature to third parties to whom this report or any part thereof is made known, unless formally agreed beforehand. Any such party relies upon the report at their own risk. This report may provide advice based on an interpretation of legislation, guidance notes and codes of practice. GEA does not however provide legal advice and if specific legal advice is required a lawyer should be consulted.

Where any conclusions and recommendations contained in this report have been based upon information provided by or obtained from others, it has been assumed that all relevant information has been provided by those parties and that such information is accurate. Any such information has not been independently verified by GEA, unless otherwise stated in the report. GEA accepts no liability for any inaccurate conclusions, assumptions or actions taken resulting from any inaccurate information supplied to GEA from others.

The report has been prepared by GEA on the basis of available information obtained during the period that the work was carried out. Although reasonable effort has been made to gather all relevant information, not all potential environmental constraints or liabilities associated with the site may have been revealed.

Appendix

Executive summary

This executive summary contains an overview of the key findings and conclusions. No reliance should be placed on any part of the executive summary until the whole of the report has been read. Other sections of the report may contain information that puts into context the findings that are summarised in the executive summary.

Brief

This report describes the findings of a desk study carried out by Geotechnical and Environmental Associates Limited (GEA) on the instructions of RGP Holdings Limited, with respect to the redevelopment of the site through construction of two temporary units for general light industrial or storage use to provide modern, efficient industrial accommodation arranged around a shared service courtyard. Proposals also include separate pedestrian and cyclist access, on-site parking, refuse stores and landscaping, including enhancements along the Shackles Dock boundary. The purpose of the work has been to determine the history of the site, to assess the potential for contamination, to provide preliminary information on the expected ground conditions and to provide preliminary information on foundation options with regard to the proposed development.

Desk Study Findings

The earliest map studied, dated 1864, shows the site to be occupied by a brick field with a railway track crossing the middle of the site from southeast to northwest. The Grand Union Canal had been constructed in the existing location, known as the Grand Junction Canal at that time. The existing pond/ dock is shown to the southwest and partly extends into the western side of the site.

The next map, dated 1914, shows the site to be developed as a wharf with the adjacent dock extending into the northwestern part of the site. The 1963 map shows a building to have been constructed in the centre of the site running alongside the wharf. A coal yard is also shown southwest of the site between the canal and the railway. At some time between 1964 and 1973 a second building was constructed in the north of the site, labelled as Chalfont House, presumed to be the existing building in this area and the former dock area in the west of the site appears to have been infilled. Tanks are also labelled in the south of the site. The site remains relatively unchanged until some time between 1984 and 1988 when the central building was demolished and replaced with the existing Chalfont House structure, the smaller Chalfont House in the north had been renamed Kargo House and the tanks are no longer shown on site.

The site has remained essentially unchanged until 2025 when the former buildings in the centre were demolished and a small building was erected in the northeast corner

The British Geological Survey (BGS) map of the area (as reproduced by Envirocheck below) indicates that the site is underlain by Langley Silt Member over the Lynch Hill Gravel Member, which in turn underlain by the London Clay Formation. The Langley Silt will have been locally removed by the brickfield workings, recorded as worked or infilled ground.

Contamination Risk Assessment

On the basis of the above it is considered that there is a MODERATE / LOW risk of there being a significant contaminant linkage at this site that would result in a requirement for major remediation work. In light of the infilled dock within the site boundary it is recommended that landfill gas monitoring is carried out as part of any ground investigation.

Foundation Assessment

Based on the assumed light to moderate loads it may be possible to adopt spread foundations bearing on the Lynch Hill Gravel for the new development. However, the desk study has indicated that a moderate thickness of made ground may be expected along with shallow groundwater which may preclude the use of spread foundations; piles could be considered as an alternative.

A ground investigation should be carried out to allow the risks associated with any potentially contaminated soils to be determined. In addition, it is recommended that deeper investigation is completed to confirm the ground conditions and to provide pile design parameters. It is recommended that gas monitoring is included as part of the investigation to determine the requirement for gas protection measures.

1.0 Introduction

Geotechnical and Environmental Associates Limited (GEA) has been commissioned by RGP Holdings Limited, to carry out a desk study at the Land East of Craufurd Industrial Estate, Silverdale Road, Haynes, UB3 3BN.

1.1 Proposed Development

It is understood that it is proposed to redevelop the site through the construction of two temporary units for general light industrial or storage use. The scheme forms an extension to the existing estate and will provide accommodation arranged around a shared courtyard, with separate pedestrian and cyclist access, on-site parking, refuse stores and landscaping, including enhancements along the Shackles Dock boundary. This report is specific to the proposed development, and the advice herein should be reviewed if the development proposals are amended.

1.2 Purpose of work

The principal technical objectives of the work carried out were as follows:

- check the history of the site and surrounding area, particularly with respect to any previous or present potentially contaminative uses;
- to provide an assessment of the risk of encountering unexploded ordnance (UXO);
- to research the geology and hydrogeology of the site;
- to check records of data on groundwater, surface water and other publicly available environmental data;
- to use the information obtained in the above searches to carry out a qualitative risk assessment with respect to subsurface contamination; and
- to provide preliminary comments on foundation options.

1.3 Scope of work

In order to meet the above objectives, a desk study was carried out, comprising, in summary, the following activities:

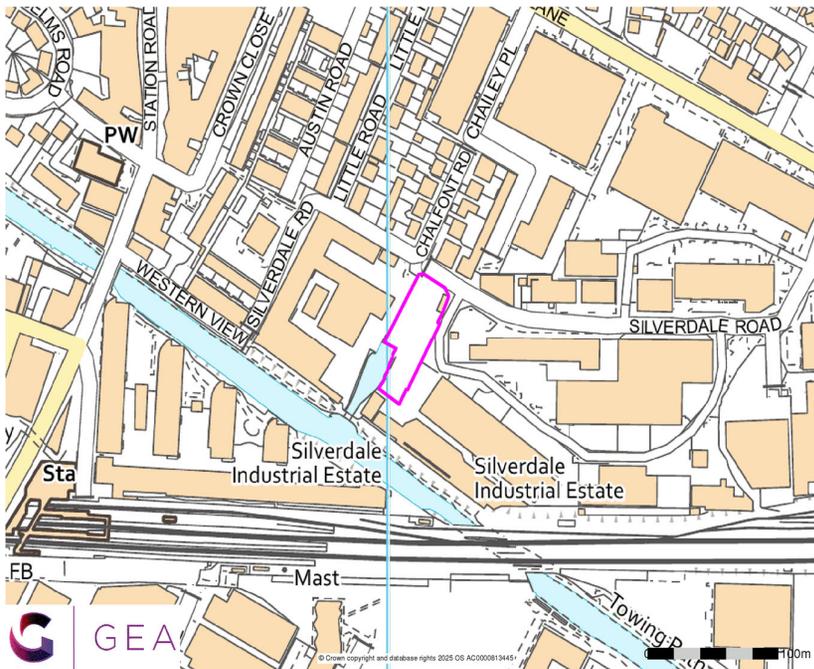

- a review of historical Ordnance Survey (OS) maps supplied from the Envirocheck database;
- a review of publicly available environmental data sourced from the Envirocheck database;
- a review of publicly available planning records held on the council website;
- a preliminary unexploded ordnance (UXO) risk assessment carried out by 1st Line Defence;
- a review of readily available geology maps; and
- provision of a report presenting and interpreting the above data, together with our advice and recommendations with respect to the proposed development.

2.0 The Site

2.1 Site Description

The site is located in the London Borough of Hillingdon, approximately 370 m to the northeast of Hayes and Hillingdon railway station. It fronts onto Silverdale Road to the north and is bounded by a car park serving a Royal Mail Building to the east and south and to the west by a lane providing access to the rear of the site and surrounding industrial buildings. The site may be additionally located by National Grid Reference TQ10082 79529 and is shown on the map extract below.

A walkover of the site was completed by a geotechnical engineer from GEA in December 2025. The site is roughly rectangular, with maximum dimensions of 60 m north to south by 20 m east to west. The perimeter of the site consists of metal palisade fencing along the

northern and eastern boundaries, and a brick wall leading to further metal fencing on the western and southern boundaries.

The site is located 35 m to the northeast of the Grand Union Canal and is adjacent to a former dock which extends up from the canal and borders the site to the southwest. The perimeter of the dock/ pond is banked by a concrete surround.

The site is covered in hardstanding with a central courtyard for the use of storage and delivery loading. The northern half of the site is occupied by a small elevated shed used as a common room; a two storey container used as reception and office space and a two storey warehouse for storage and vehicle maintenance.

At the time of the walkover the site was in use as a concrete mixing depot. The southern portion of the site was occupied by a pair of two-level storage containers with a series of mechanical structures leading to two large free standing metal tanks with maximum dimensions of 10 m tall and 2.5 m diameter used for mixing concrete. The structures stand on raised concrete blocks.

A range of building materials were observed to be stored along the boundaries including, timber, breeze blocks, bricks and two large aggregate piles on the eastern border.

No manhole or buried services covers were observed on the site although a collection of pipes and wires were noted running along the eastern wall. The site is essentially level with limited vegetation in the form of shrubs and reeds along the pond boundary with a singular small tree breaking through the concrete perimeter. The hardstanding of the southern portion of the site was flooded by standing water. The runoff from site appears to drain towards the pond.

No suspicious or noticeable fumes or odours or spillages were noted during the walkover.

2.2 Site History

The site history has been researched by reference to internet sources and historical Ordnance Survey (OS) maps obtained from the Envirocheck database.

The earliest map studied, dated 1864, shows the site to be occupied by a brick field with a railway track crossing the middle of the site from southeast to northwest. The Grand Union Canal had been constructed in the existing location, known as the Grand Junction Canal at that time. The existing pond/ dock is shown to the southwest and partly extends into the western side of the site. The map also shows a number of wells located within 250m of the site with two adjacent to clay mills likely associated with the brick field. Hayes railway station is located 260m south-west of the site.

By 1895 a carriage shed had been constructed approximately 100m southwest of the site associated with the railway, with an adjacent dock extending from the canal. A few of the wells previously noted were no longer shown along with the listed clay mills and the railway track that cut across the site.

The next map, dated 1914, shows the site to be developed as a wharf with the adjacent dock extending into the northwestern part of the site. A chair factory had been developed to the west and a piano factory to the east. Tramways associated with these factories were also established leading to the wharf. The outline of Silverdale Road is also shown on the 1914 map. The dock adjacent to the carriage shed had been infilled by 1914.

By 1934 the piano factory to the southeast had been redeveloped as a potato crisp factory, with a smaller piano factory established to the south, and a joinery had been developed 60 m to the northeast, while the site remained unchanged and occupied by a wharf. A collection of residential buildings had been constructed to the north of the site on the opposite side of Silverdale Road also by this time. Further northeast, is a preserves works and a cocoa factory is present to the southeast. Tanks are noted 250 m to the southeast of the site associated with the railway.

The 1963 map shows a building to have been constructed in the centre of the site running alongside the wharf. A coal yard is also shown southwest of the site between the canal and the railway. At some time between 1964 and 1973 a second building was constructed in the north of the site, labelled as Chalfont House, presumed to be the existing building in this area and the former dock area in the west of the site appears to have been infilled. Tanks are also labelled in the south of the site.

The 1973 map shows the previous piano factory to be labelled as an engineering works and the former chair factory as a motor repair works. A portion of the coal yard to the southwest had been developed as a metal works by that time. Three electrical substations had also been constructed to the northeast and east of the site with the closest approximately 33 m away from the site boundary.

The site remains relatively unchanged until some time between 1984 and 1988 when the central building was demolished and replaced with the existing Chalfont House structure, the smaller Chalfont House in the north had been renamed Kargo House and the tanks are no longer shown on site.

The site has remained essentially unchanged until 2025 when the former buildings in the centre were demolished and a small building was erected in the northeast corner. Aerial photography shows that during 2025, concrete mixing vehicles and excavation vehicles were present on site likely associated with the most recent occupation of the site as a ready-mix concrete supplier which can still be seen listed on Google maps.

2.2.1 Planning History

A search of planning records held by the London Borough of Hillingdon has shown the following planning applications pertaining to the site.

Location	Planning Ref No	Registration Date	Details
Chalfont House	6224/E/83/1803	21/12/1983	Erection of general industrial building with ancillary offices
Chalfont House	6224/F/84/1391	17/08/1984	Part 2 storey, part 3 storey industrial building with ancillary offices and car parking.
Chalfont House	6224/H/85/1756	29/10/1985	Erection of extension to manufacturing workshop including partial filling in of canal basin
Chalfont House	6224/J/87/2269	18/11/1987	Compliance with condition 4(landscaping details) of planning permission REF:6224E/83/1803
Chalfont House and Kargo House	6224/APP/2001/2441	16/11/2001	Replacement of perimeter chain link fencing and manually operated 5-meter-wide gate, with steel paling fencing, automatic 5-meter vehicular access gate and 1.25-meter pedestrian access gate, all at a height of 3 meters

2.3 Other Information

A search of public registers and databases has been made via the Envirocheck database and relevant extracts from the search are appended. Full results of the search can be provided if required.

The Envirocheck report has indicated that the whole site and much of the surrounding area is classed as potentially infilled land with an area of historic landfill located within 250m southeast of the site. A single waste management facility and waste transfer facility are located 256m east of the site. Both have been operating since 1999 accepting and managing clinical waste groups A, B, C and E. The facilities are still operational and handling less than 10,000 tonnes a year.

A total of 10 pollution incidents to controlled waters are recorded within 250 m of the site, the most notable of which located within 100m are all associated with unknown chemicals. The nearest incident located 81m southeast of the site is classed as a category 2 significant incident dating to 1989. The second is a category 3 minor incident and is located southeast of the site dating to 1991. The final incident was also a category 2 and is located 93m west of the site dating to 1990.

There is a single Integrated Pollution Control associated with combustion processes within the fuel and power industry, located 292 m southeast of the site; an integrated pollution prevention and control is also located at the same location. Both are inactive but could still be a potential contaminant source. An active integrated pollution prevention and control is located 254 m south of the site and is associated with a medium combustion plant.

There is a single contemporary trade directory entry listed on site and a further 25 within 100 m of the site. The most notable contemporary trade directories are summarized in the following table.

Distance	Location	Entry	Active / Inactive
On site	Chalfont House	Commercial Cleaning Services	Inactive
29 m SE	Unit 9, Crauford Business Park	Air Conditioning & refrigeration Contractors	Inactive
34 m NE	Silverdale Road	Heat Treatments – Metals	Active
34 m NE	Silverdale Road	Precision Engineers	Inactive
34 m NE	Silverdale Road	Precision Engineers	Inactive
39 m S	Silverdale Road	Car Customisation & Conversion Specialists	Inactive
39 m S	Silverdale Works	Commercial Vehicle Servicing, Repairs, Parts & Accessories	Inactive
43 m NE	7 Chalfont Road	Precision Engineers	Inactive
50 m E	Unit 4 Benlow Works	Machine Tools – Manufacturing & Distributors	Active
50 m E	Unit 3 Benlow Works	Sheet Metal Work	Active
51 m E	Benlow Works	Blast Cleaning	Inactive
51 m E	Benlow Works	Sheet metal works	Inactive
51 m E	Unit 1 Benlow Works	Press Tool Manufacturers & distributors	Active
51 m E	Benlow Works	Sheet Metal Works	Inactive
52 m NW	Silverdale Road	Engine Rebuilding & Reconditioning	Inactive
56 m NW	Unit 9A Silverdale Road	Freight Forwarders	Inactive
56 m NW	Unit 6 Crauford Business Park	Joinery manufacturers	Inactive
56 m NW	Unit 9A Silverdale Road	Distribution Services	Inactive
56 m NW	Unit 6 Crauford Business Park	Cabinet Makers	Inactive
59 m SE	Unit 9 Silverdale Industrial Estate	Foundries	Active
60 m W	Unit 8 Crauford Business Park	Window Frame Manufactures	Inactive
60 m W	Crauford Business Park	Garage Services	Inactive
60 m W	Unit 5 Crauford Business Park	Garage Services	Active
66 m W	Unit 5B Crauford Business Park	Window Tinting	Active
80 m NW	Unit 1 Crauford Business Park	Musical Instrument – Manufacturers	Active
100 m SE	Silverdale Industrial Park	Garage Services	Active

There are no fuel filling stations within 250 m of the site, with the nearest located 479 m to the southwest of the site, which is open. It is unlikely to have an impact on the site at this distance.

Information on Urban Soil Chemistry provided by the BGS indicates that background concentrations for lead in the vicinity of the site are likely to range between 150 mg/kg and 300 mg/kg. Therefore, whilst relatively medium concentrations of lead may be encountered within any near surface soils present on the site, a significant proportion of the measured concentration is likely to be the result of residual airborne sources, and this will need to be taken into account in any subsequent risk assessment.

The site is not located within an area of sensitive land use, with the nearest located 493 m to the west of the site, relating to a nitrate vulnerable zone. A number of areas of adopted green belt can also be seen surrounding the site but all are greater than 600m away from the site.

Reference to records compiled by the Health Protection Agency (formerly the National Radiological Protection Board) indicates that the site falls within an area where less than 1% of homes are affected by radon emissions and therefore radon protective measures should not be necessary.

A total of six Points of Interest relating to commercial activities within 100 m, all relating to vehicle repair and servicing or metal works. Twelve Points of Interest relating to manufacturing and production are located within 100 m of the site, most of which relate to works or factories.

The report indicates that, during World War II (WWII), the site was located within the Hayes and Harlington Urban District, which sustained an overall low-moderate bomb density with 40.1 items of ordnance recorded per 1,000 acres. During and before WWII the site was largely occupied by a wharf associated with the Grand Union Canal. Post-WWII mapping shows two structures built on the site. London Bomb Census mapping suggests that several bombing incidents occurred across the site's direct environs, potentially within the adjoining chair factory. It is unclear how nearby incidents may have impacted the site as significant portions comprised of open water and how the wharf on site was used during WWII. As such, it is recommended that further research, in the form of a detailed UXO risk assessment be completed, or in lieu of this, appropriate UXO risk mitigation measures.

2.4 Preliminary UXO Risk Assessment

A Preliminary UXO Risk Assessment has been completed by 1st Line Defence (report ref PA23021-00, dated 25th November 2025), and the report is included in the appendix. The risk assessment has been carried out in accordance with the guidelines provided by CIRIA¹, which state that the likelihood of encountering and detonating UXO below a site should be assessed along with establishing the consequences that may arise. The first phase comprises a preliminary risk assessment, which should be undertaken at an early stage of the development planning. If such an assessment identifies a high level of risk, then a detailed risk assessment should be carried out by a UXO specialist, which will identify an appropriate course of action with regard to risk mitigation.

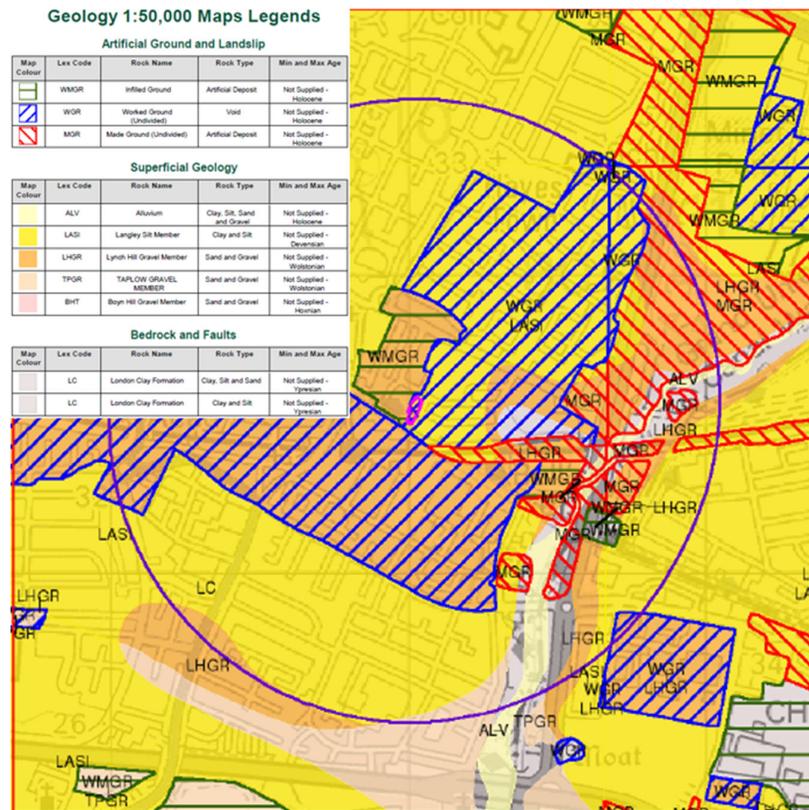

1 CIRIA C681 (2009) *Unexploded ordnance (UXO) A guide for the construction industry*

3.0 Ground Conditions

3.1 Soil Conditions

The British Geological Survey (BGS) map of the area (as reproduced by Envirocheck below) indicates that the site is underlain by Langley Silt Member over the Lynch Hill Gravel Member, which is in turn underlain by the London Clay Formation. The Langley Silt will have been locally removed by the brickfield workings, recorded as worked or infilled ground.

A search of the BGS borehole database has identified records of a number of boreholes advanced around the business park/ industrial estate to the east of the site. The more recent boreholes recorded Made Ground to between 2.40 m and 5.70 m. Some of the boreholes encountered localised gravel to depths of between 2.70 m and 4.80 m. The anticipated underlying London Clay was encountered to a depth of between 56.90 and 65.20 m. This was underlain by the Lambeth Group to a depth of 78.60 m and was in turn underlain by chalk, which extended to the maximum depth investigated, of 167.64 m.

3.2 Hydrology and Hydrogeology

The Langley Silt is classified as a secondary aquifer, whilst the Lynch Hill Gravel is classified as a principal aquifer of medium vulnerability. The underlying London Clay is classified by the Environment Agency as unproductive strata, referring to rock layers or drift deposits with low permeability that have negligible significance for water supply or river base flow.

The nearest surface water feature is the pond to the southwest of the site and the adjacent Grand Union Canal, located 35 m to the south. The aforementioned BGS boreholes encountered seepages of groundwater at depths of between 1.70 m and 2.60 m within the made ground.

A collection of five water abstraction points are located 327 m southeast of the site, operated by Nestle UK Ltd. The site is not located within a Groundwater Protection Zone and is not located within an area with potential for groundwater flooding to occur. In addition, the site is not located within an area at risk of flooding from rivers or the sea and is recorded as having a very low risk (1000 year return) for surface water flooding to occur.

The site is almost entirely covered by a mixture of concrete hardstanding, with areas of soft landscaping in the southwest corner bordering the pond. Infiltration of rainwater is generally restricted to surface water drains, such that the majority of surface runoff currently drains into combined sewers in the road or towards the adjacent body of water.

The proposed development includes the introduction of some permeable paving and so will slightly decrease the ratio of hardstanding on the site. The perimeter of the water body is also planned to be converted to soft landscaping with a pathway leading between the industrial units.

4.0 Risk Assessment

4.1 Environmental Risks

Part IIA of the Environmental Protection Act 1990, which was inserted into that Act by Section 57 of the Environment Act 1995, provides the main regulatory regime for the identification and remediation of contaminated land. The determination of contaminated sites is based on a “suitable for use” approach which involves managing the risks posed by contaminated land by making risk-based decisions. This risk assessment is carried out on the basis of a source-pathway-receptor approach.

4.1.1 Source

The desk study findings indicate that the site has a potentially contaminative history having been occupied by a brick field with a railway line crossing the middle of the site in the late 19th Century. This usage may have resulted in localised spillages and leaks of hydrocarbons, coal dust, metal particulates and asbestos fibres, along with possible localised spillages of handled cargoes². Ash ballast may also have been used. In addition, since the site was redeveloped in 1914 with the addition of a wharf to the southwest of the site, which may have resulted in a variety of unknown localised spillages and leaks of contaminants such as hydrocarbons, heavy metals and solvents³. The wharf area was then subject to infilling and the infill material is unknown; this represents a potential source of landfill gas.

In addition, above ground storage tanks were identified on site in the 1970s. The tanks and vehicle storage identified during the walkover, represent possible localised sources of hydrocarbon contamination. The hydrocarbon contamination represents a possible source of soil vapour.

Nearby electrical substations, given their age, may represent possible sources of polychlorinated biphenyl (PCB) contamination.

4.1.2 Receptor

The redevelopment of the site to have a commercial end use will result in end users representing sensitive receptors. Adjacent sites are also considered to be sensitive receptors.

The site is directly underlain by Lynch Hill Gravel, which is classified as a principal aquifer, as such groundwater is considered to be a sensitive receptor.

Buried services are likely to come into contact with any contaminants present within the soils through which they pass, and site workers are potential receptors during construction or maintenance works.

4.1.3 Pathway

There is currently a limited pathway for contaminants in the made ground to be mobilised by infiltrating surface runoff to reach the principal aquifer. However, perched water within the made ground and Lynch Hill Gravel may allow the migration of mobile contaminants to neighbouring sites.

Within the site, end users will be largely isolated from direct contact with any contaminants present within the made ground by the presence of the buildings and the extent of the hardstanding, however any soft landscaping will present a potential exposure pathway.

Buried services may be exposed to any contaminants present within the soil through direct contact and site workers will come into contact with the soils during construction works.

2 Department of the Environment Industry Profile (1995) *Railway Land*. HMSO.

3 Department of the Environment Industry Profile (1996) *Road vehicle fueling, service and repair: garages and filling stations*. HMSO.

4.1.4 Preliminary Risk Appraisal

In accordance with the guidelines provided by CIRIA⁴, the following table comprises the conceptual site model and summarises possible pollution linkages for the site.

Source	Receptor	Pathway	Probability	Consequence	Risk
Inorganic and organic contamination within near surface soils resulting from existing and past activities on site	End users	Ingestion of contaminated soil or dust, through skin contact or inhalation	Low likelihood	Medium	Moderate / Low
	Vegetation	Uptake via soil through roots	Low likelihood	Medium	Moderate / Low
	Groundwater	Percolation and leaching of surface run-off	Unlikely	Medium	Low
	Buried services / foundation concrete	Direct contact	Low likelihood	Mild	Moderate / Low
	Adjacent sites	Surface water flow or drain runs	Low likelihood	Mild	Moderate / Low
	Site workers	Ingestion of contaminated soil or dust, skin contact, inhalation	Likely	Medium	Moderate
	Surface water bodies	Surface water flow or drain runs	Low likelihood	Medium	Moderate / Low
	Inorganic and organic contamination within groundwater resulting from existing and past activities on site and surrounding area	End users	Direct contact	Unlikely	Medium
Vegetation		Uptake through roots	Unlikely	Medium	Low
Buried services / foundation concrete		Direct contact	Low likelihood	Mild	Moderate / Low
Adjacent sites		Surface water flow or drain runs	Low likelihood	Mild	Moderate / Low
Site workers		skin contact	Low likelihood	Medium	Moderate / Low

Source	Receptor	Pathway	Probability	Consequence	Risk
Landfill gas and vapours	End users	Inhalation	Low likelihood	Medium	Moderate / Low
	Groundwater	Diffusion into groundwater	Unlikely	Medium	Low
	Buried services / foundation concrete	Deterioration /Explosion	Unlikely	Medium	Low
	Adjacent sites	Through permeable soils	Unlikely	Medium	Very Low
	Site workers	Inhalation	Low likelihood	Medium	Moderate / Low

This method of risk evaluation involves classification of the magnitude of the potential consequence (severity) and probability (likelihood) of the risk. The method by which these factors are classified is detailed in the Appendix. On the basis of the consequence and probability the site can be attributed a level of risk, ranging from very low to very high and the procedure for making this assessment is shown in the Appendix, together with a description of each level of assessed risk and the actions that may be required to mitigate the risk.

On the basis of the above it is considered that there is a MODERATE risk of there being a significant contaminant linkage at this site that would result in a requirement for major remediation work. In light of the infilled dock within the site boundary it is recommended that landfill gas monitoring is carried out as part of any ground investigation.

⁴ Rudland, DJ, Lancefield, RM and Mayell, PN (2001) *Contaminated land risk assessment. A guide to good practice. CIRIA C552*

4.2 Development Issues

It is understood that it is proposed to redevelop the site through the construction of two B2/B8 industrial units arranged around a shared courtyard, with separate pedestrian and cyclist access, on-site parking, refuse stores and landscaping, including enhancements along the Shackles Dock boundary.

Based on the assumed light to moderate loads it may be possible to adopt spread foundations bearing on the Lynch Hill Gravel for the new development. However, the desk study has indicated that a moderate thickness of made ground may be expected along with shallow groundwater which may preclude the use of spread foundations; piles could be considered as an alternative.

Bored piles installed using continuous flight auger (cfa) techniques, which would negate the requirement for temporary casing and would be most appropriate. Alternatively, consideration could be given to the use of driven piles, but consideration will need to be given to the associated noise and vibrations on neighbouring sites and railway.

A ground investigation will be required to confirm the ground conditions across the site and to check for the presence of contamination. It is recommended that gas monitoring is included as part of the investigation to determine the requirement for gas protection measures.

5.0 Conclusions

On the basis of the findings of the research carried out there is considered to be a MODERATE/LOW RISK of there being significant contamination linkage at this site. A risk from soil gas has been identified and monitoring is recommended.

A ground investigation should be carried out to allow the risks associated with any potentially contaminated soils that may be present due to past activities on the site to be determined. The ground investigation should be designed to target areas identified by the walkover of being of concern with respect to potential contamination, particularly around the storage tanks. In addition, it is recommended that deeper investigation is completed to confirm the ground conditions and to provide pile design parameters.

As per the recommendations of the preliminary UXO risk assessment, further work in the form of a detailed UXO risk assessment will need to be completed, or in lieu of this, appropriate on-site support will be required for all intrusive works.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Natural England Copyright Notice

Site of Special Scientific Interest, National Nature Reserve, Ramsar, Special Protection Area, Special Conservation Area, Marine Nature Reserve data (derived from Ordnance Survey 1:10000 raster) is provided by, and used with the permission of, Natural England who retain the copyright and Intellectual Property Rights for the data.

Scottish Natural Heritage Copyright

Contains SNH information licensed under the Open Government Licence v3.0.

Ove Arup Copyright Notice

The Mining Instability data was obtained on licence from Ove Arup & Partners Limited (for further information, contact mining.review@arup.com). No reproduction or further use of such Data is to be made without the prior written consent of Ove Arup & Partners Limited. The supplied Mining Instability data is derived from publicly available records and other third party sources and neither Ove Arup & Partners nor Landmark warrant the accuracy or completeness of such information or data.

Stantec Copyright Notice

The cavity data presented has been extracted from the PBA (now Stantec UK Ltd) enhanced version of the original DEFRA national cavity databases. Stantec UK Ltd retain the copyright & intellectual property rights in the data. Whilst all reasonable efforts are made to check that the information contained in the cavity databases is accurate we do not warrant that the data is complete or error free. The information is based upon our own researches and those collated from a number of external sources and is continually being augmented and updated by Stantec UK Ltd. In no event shall Stantec UK Ltd or Landmark be liable for any loss or damage including, without limitation, indirect or consequential loss or damage arising from the use of this data.

Radon Potential dataset Copyright Notice

Information supplied from a joint dataset compiled by The British Geological Survey and Public Health England. The probability result is only valid for properties above ground. All basement and cellar areas are considered to be at additional risk from high radon levels. If an underground room such as a cellar or basement makes up part of the living or working accommodation, the property should be tested regardless of Radon Affected Area status.

Data Type	Page Number	On Site	0 to 250m	251 to 500m	501 to 1000m (*up to 2000m)
Agency & Hydrological					
BGS Groundwater Flooding Susceptibility	pg 1	Yes	Yes		n/a
Contaminated Land Register Entries and Notices					
Discharge Consents	pg 1				5
Prosecutions					
Enforcement and Prohibition Notices					
Integrated Pollution Controls	pg 2			4	2
Integrated Pollution Prevention And Control	pg 3			6	6
Local Authority Integrated Pollution Prevention And Control					
Local Authority Pollution Prevention and Controls	pg 6		2	5	10
Local Authority Pollution Prevention and Control Enforcements					
Nearest Surface Water Feature	pg 9	Yes			
Pollution Incidents to Controlled Waters	pg 9		10	5	41
Historical Prosecutions	pg 18			1	
Registered Radioactive Substances	pg 18				3
Substantiated Pollution Incident Register	pg 19		1		1
Water Abstractions	pg 19			5	4 (*20)
Water Industry Act Referrals	pg 26			1	2
Groundwater Vulnerability Map	pg 27	Yes	n/a	n/a	n/a
Groundwater Vulnerability - Soluble Rock Risk			n/a	n/a	n/a
Groundwater Vulnerability - Local Information		2	n/a	n/a	n/a
Bedrock Aquifer Designations	pg 28	Yes	n/a	n/a	n/a
Superficial Aquifer Designations	pg 28	Yes	n/a	n/a	n/a
Source Protection Zones					
Extreme Flooding from Rivers or Sea without Defences				n/a	n/a
Flooding from Rivers or Sea without Defences				n/a	n/a
Areas Benefiting from Flood Defences				n/a	n/a
Flood Water Storage Areas				n/a	n/a
Flood Defences				n/a	n/a
OS Water Network Lines	pg 28		3	1	20
Water Framework Directive - Catchment	pg 31	Yes	Yes	Yes	Yes
Water Framework Directive - Groundwater	pg 31	Yes			
Water Framework Directive - Surface Waters	pg 31		Yes		Yes

Data Type	Page Number	On Site	0 to 250m	251 to 500m	501 to 1000m (*up to 2000m)
Waste					
BGS Recorded Landfill Sites					
Historical Landfill Sites	pg 33		1		3
Integrated Pollution Control Registered Waste Sites					
Licensed Waste Management Facilities (Landfill Boundaries)					
Licensed Waste Management Facilities (Locations)	pg 33			2	2
Local Authority Landfill Coverage		1	n/a	n/a	n/a
Local Authority Recorded Landfill Sites					
Potentially Infilled Land (Non-Water)	pg 34	1		1	2
Potentially Infilled Land (Water)	pg 35		2	6	2
Registered Landfill Sites					
Registered Waste Transfer Sites	pg 35			3	1
Registered Waste Treatment or Disposal Sites					
Hazardous Substances					
Control of Major Accident Hazards Sites (COMAH)					
Explosive Sites	pg 37				1
Notification of Installations Handling Hazardous Substances (NIHHS)					
Planning Hazardous Substance Consents					
Planning Hazardous Substance Enforcements					

Data Type	Page Number	On Site	0 to 250m	251 to 500m	501 to 1000m (*up to 2000m)
Geological					
BGS 1:625,000 Solid Geology	pg 38	Yes	n/a	n/a	n/a
BGS Estimated Soil Chemistry					
BGS Recorded Mineral Sites	pg 38		3	9	9
BGS Urban Soil Chemistry	pg 41			Yes	Yes
BGS Urban Soil Chemistry Averages	pg 44	Yes			
CBSCB Compensation District			n/a	n/a	n/a
Coal Mining Affected Areas			n/a	n/a	n/a
Mining Instability			n/a	n/a	n/a
Man-Made Mining Cavities					
Natural Cavities					
Non Coal Mining Areas of Great Britain				n/a	n/a
Potential for Collapsible Ground Stability Hazards	pg 44	Yes	Yes	n/a	n/a
Potential for Compressible Ground Stability Hazards	pg 45	Yes	Yes	n/a	n/a
Potential for Ground Dissolution Stability Hazards				n/a	n/a
Potential for Landslide Ground Stability Hazards	pg 45	Yes		n/a	n/a
Potential for Running Sand Ground Stability Hazards	pg 45	Yes	Yes	n/a	n/a
Potential for Shrinking or Swelling Clay Ground Stability Hazards	pg 45	Yes	Yes	n/a	n/a
Radon Potential - Radon Affected Areas			n/a	n/a	n/a
Radon Potential - Radon Protection Measures			n/a	n/a	n/a
Industrial Land Use					
Contemporary Trade Directory Entries	pg 47	1	68	162	242
Fuel Station Entries	pg 87			1	6
Points of Interest - Commercial Services	pg 88		27	78	90
Points of Interest - Education and Health					
Points of Interest - Manufacturing and Production	pg 104		42	58	71
Points of Interest - Public Infrastructure	pg 119			9	17
Points of Interest - Recreational and Environmental	pg 121		2	5	2
Underground Electrical Cables	pg 122				4

Data Type	Page Number	On Site	0 to 250m	251 to 500m	501 to 1000m (*up to 2000m)
Sensitive Land Use					
Ancient Woodland					
Areas of Adopted Green Belt	pg 123				7
Areas of Unadopted Green Belt					
Areas of Outstanding Natural Beauty					
Environmentally Sensitive Areas					
Forest Parks					
Local Nature Reserves					
Marine Nature Reserves					
National Nature Reserves					
National Parks					
Nitrate Sensitive Areas					
Nitrate Vulnerable Zones	pg 123			1	
Ramsar Sites					
Sites of Special Scientific Interest					
Special Areas of Conservation					
Special Protection Areas					
World Heritage Sites

Geology 1:50,000 Maps

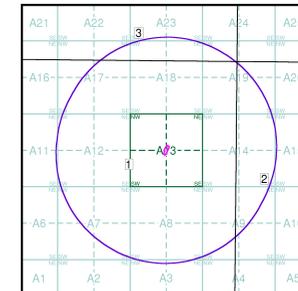

This report contains geological map extracts taken from the BGS Digital Geological map of Great Britain at 1:50,000 scale and is designed for users carrying out preliminary site assessments who require geological maps for the area around the site. This mapping may be more up to date than previously published paper maps.

The various geological layers - artificial and landslip deposits, superficial geology and solid (bedrock) geology are displayed in separate maps, but superimposed on the final 'Combined Surface Geology' map. All map legends feature on this page. Not all layers have complete nationwide coverage, so availability of data for relevant map sheets is indicated below.

Superficial Geology

Superficial Deposits are the youngest geological deposits formed during the most recent period of geological time, the Quaternary, which extends back about 1.8 million years from the present.

They rest on older deposits or rocks referred to as Bedrock. This dataset contains Superficial deposits that are of natural origin and 'in place'. Other superficial strata may be held in the Mass Movement dataset where they have been moved, or in the Artificial Ground dataset where they are of man-made origin.

Most of these Superficial deposits are unconsolidated sediments such as gravel, sand, silt and clay, and onshore they form relatively thin, often discontinuous patches or larger spreads.

Bedrock and Faults

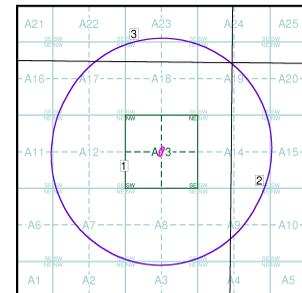

Bedrock geology is a term used for the main mass of rocks forming the Earth and are present everywhere, whether exposed at the surface in outcrops or concealed beneath superficial deposits or water.

The bedrock has formed over vast lengths of geological time ranging from ancient and highly altered rocks of the Proterozoic, some 2500 million years ago, or older, up to the relatively young Pliocene, 1.8 million years ago.

The bedrock geology includes many lithologies, often classified into three types based on origin: igneous, metamorphic and sedimentary.

The BGS Faults and Rock Segments dataset includes geological faults (e.g. normal, thrust), and thin beds mapped as lines (e.g. coal seam, gypsum bed). Some of these are linked to other particular 1:50,000 Geology datasets, for example, coal seams are part of the bedrock sequence, most faults and mineral veins primarily affect the bedrock but cut across the strata and post date its deposition.

Combined Surface Geology

The Combined Surface Geology map combines all the previous maps into one combined geological overview of your site.

Please consult the legends to the previous maps to interpret the Combined "Surface Geology" map.

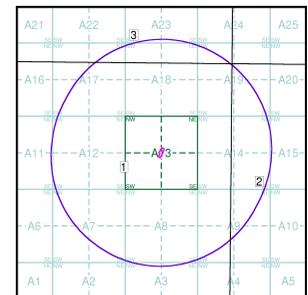

Additional Information

More information on 1:50,000 Geological mapping and explanations of rock classifications can be found on the BGS website. Using the LEX Codes in this report, further descriptions of rock types can be obtained by interrogating the 'BGS Lexicon of Named Rock Units'. This database can be accessed by following the 'Information and Data' link on the BGS website.
