## **A. Correspondence with LB Hillingdon**

From: Alex Keene  
Sent: 15 July 2022 14:04  
To: Alan Tilly  
Cc: Mark Fitch  
Subject: MSD Site (Ref: 72870/PRC/2021/258)

Hi Alan,

Thank you for your time yesterday. Just to recap our discussion:

- Since the pre-application meeting, we have undertaken five days' worth of surveys (covering weeks either side of the summer half-term) at two existing Keltbray sites at West Drayton and Bedfont to gauge activity. The combined size of these sites is 5.4ha, and therefore slightly greater than that of the proposed site at Breakspear Road North
- A working assumption is that the two sites at West Drayton and Bedfont would be consolidated into the proposed site, with a small level of potential activity currently associated with a Keltbray site at Egham
- Following discussions with Keltbray, the combined sites' activity would provide a reasonable forecast of the anticipated activity of the proposed site at opening.
- The subsequent data identified an average level of activity equivalent to about 256 two-way movements per day (based on the profiles across the surveyed days). Based on the day of peak activity, the site would be expected to generate approximately 291 two-way movements per day
- For both the average and the Friday, the inbound peak hour is 0600-0700 and outbound 1700-1800, with circa 25-30 vehicles (30-35 two-way). The vast majority of these trips are by car / LGV.
- OGV activity is limited – there are on average 6 two-way movements in an hour in the morning and evening peaks, with typically 2-4 two-way movements an hour across the day. Friday activity was slightly higher with a few instances of 8-10 two-way movements an hour (up to 6 movements in a single direction or an average of one every 10 minutes). While Keltbray do operate some larger articulated HGVs, and infrequent extended vehicles, the majority of OGV activity is classified as OGV1.
- It was noted that the future site trip generation will therefore be limited, with peak traffic generation typically occurring out of highway peak or contra-peak.
- The extant permission associated with the site was also discussed. We do not have information on the historic activity associated with the MSD site, although we understand that the specific nature of their operation means that the trip generation of the site was limited. However, based on relevant TRICS trip rates for the closest uses to the extant permission, using the existing office / industrial footprint of the site, the daily trip generation of the consented use of the site is considerably greater than that associated with the proposed facility
- The level of potential activity is now better understood and is considerably lower than the potential activity identified in the scoping note, based on a rough rule of thumb. The predicted traffic is therefore unlikely to be significant in the context of the movements on the local highway network, so it was agreed that a TS rather than a TA would be suitable for submission as part of the planning application. This would include:
  - Review of relevant policy and the accessibility of the site
  - Information on the proposed site including anticipated nature of the operation, access and parking proposals and commentary on the other Keltbray sites with associated trip generation
  - Impact analysis to compare the forecast activity on site compared to that associated with the consented use of the site and baseline traffic flows (where available)
  - Commentary on demand management measures, including the production of a Travel Plan for the site
- You confirmed that no other matters we discussed were of concern, such as infrequent access by vehicles longer than 16.5 m artic. However we will document all expected vehicles in the TS.
- It was agreed that junction modelling would not be required and there are no current mitigation schemes identified to alleviate existing congestion at the junctions between the site and the A40. While subject to

requirement / viability analysis, in the event of any contributions being required you suggested these would be best focussed towards the existing Chiltern mainline bridge, noting that these were not going to be structural changes but more likely to be focussed to signage and improved guidance of vehicles under the structure. You were going to confirm what potential measures are being considered by LBH and also provide more information on the nature of the recent bridge strikes (noting this is an existing issue)

- The level of parking provision on site will need to be justified in light of employee numbers and LBH standards. It was noted that 100% EV provision from the start would be onerous, and we discussed staff parking with of the order of 20% active and 80% passive provision at opening as being more appropriate, with demand for EV charging monitored and provision increased as required.
- You will advise what the HS2 proposals are for footway and cycleway connections in the local area.

I trust this is in line with your recollection of the meeting. Given the need to progress, we would ask that you confirm if you have any comments on the above by 21/07/22.

Kind regards

Alex

## **B. Proposed Site Layout**

**campbellarchitects**

55 Whitfield Street, London W1T 4AH  
www.campbellarchitects.co.uk

Do not scale

**Safety, Health and Environmental Information**

In addition to the hazards/risks normally associated with the types of work detailed on this drawing and noted in the Designer Risk Assessments and health and safety plan, note the following:

- It is assured that all works on this will be carried out by a competent Contractor working where appropriate, to be an approved method statement.
- Where applicable, significant residual risks are highlighted in the body of the drawing.

**General Note**

- All levels and dimensions are approximate, detailed site surveys must be carried out by Contractor before commencement on building works. All levels and dimensions to be confirmed on site.
- All existing drawing information is indicative and subject to the detailed site survey.
- Drawing is for information only.
- Do not scale from this drawing.
- This drawing is copyrighted.

# D. TRICS Outputs

Calculation Reference: AUDIT-704113-220216-0203

# TRIP RATE CALCULATION SELECTION PARAMETERS:

Land Use : 02 - EMPLOYMENT  
Category : D - INDUSTRIAL ESTATE  
MULTI-MODAL TOTAL VEHICLES

## Selected regions and areas:

01	GREATER LONDON	
	BE BEXLEY	1 days
	HD HILLINGDON	1 days
02	SOUTH EAST	
	ES EAST SUSSEX	1 days
	EX ESSEX	2 days

*This section displays the number of survey days per TRICS® sub-region in the selected set*

## Primary Filtering selection:

*This data displays the chosen trip rate parameter and its selected range. Only sites that fall within the parameter range are included in the trip rate calculation.*

Parameter: Gross floor area  
Actual Range: 3300 to 13850 (units: sqm)  
Range Selected by User: 3300 to 15000 (units: sqm)

Parking Spaces Range: All Surveys Included

## Public Transport Provision:

Selection by: Include all surveys

Date Range: 01/01/13 to 10/06/19

*This data displays the range of survey dates selected. Only surveys that were conducted within this date range are included in the trip rate calculation.*

## Selected survey days:

Monday	1 days
Wednesday	1 days
Thursday	1 days
Friday	2 days

*This data displays the number of selected surveys by day of the week.*

## Selected survey types:

Manual count	5 days
Directional ATC Count	0 days

*This data displays the number of manual classified surveys and the number of unclassified ATC surveys, the total adding up to the overall number of surveys in the selected set. Manual surveys are undertaken using staff, whilst ATC surveys are undertaken using machines.*

## Selected Locations:

Edge of Town	5
--------------	---

*This data displays the number of surveys per main location category within the selected set. The main location categories consist of Free Standing, Edge of Town, Suburban Area, Neighbourhood Centre, Edge of Town Centre, Town Centre and Not Known.*

## Selected Location Sub Categories:

Industrial Zone	4
Residential Zone	1

*This data displays the number of surveys per location sub-category within the selected set. The location sub-categories consist of Commercial Zone, Industrial Zone, Development Zone, Residential Zone, Retail Zone, Built-Up Zone, Village, Out of Town, High Street and No Sub Category.*

Secondary Filtering selection:

Use Class:

Not Known 5 days

*This data displays the number of surveys per Use Class classification within the selected set. The Use Classes Order 2005 has been used for this purpose, which can be found within the Library module of TRICS®.*

Filter by Site Operations Breakdown:

All Surveys Included

Population within 500m Range:

All Surveys Included

Population within 1 mile:

10,001 to 15,000	3 days
25,001 to 50,000	1 days
50,001 to 100,000	1 days

*This data displays the number of selected surveys within stated 1-mile radii of population.*

Population within 5 miles:

125,001 to 250,000	3 days
500,001 or More	2 days

*This data displays the number of selected surveys within stated 5-mile radii of population.*

Car ownership within 5 miles:

0.6 to 1.0	1 days
1.1 to 1.5	4 days

*This data displays the number of selected surveys within stated ranges of average cars owned per residential dwelling, within a radius of 5-miles of selected survey sites.*

Travel Plan:

No 5 days

*This data displays the number of surveys within the selected set that were undertaken at sites with Travel Plans in place, and the number of surveys that were undertaken at sites without Travel Plans.*

PTAL Rating:

No PTAL Present	3 days
1b Very poor	2 days

*This data displays the number of selected surveys with PTAL Ratings.*

	Edge of Town		
	Industrial Zone		
	Total Gross floor area:	13850 sqm	
	Survey date: THURSDAY	25/06/15	Survey Type: MANUAL

*This section provides a list of all survey sites and days in the selected set. For each individual survey site, it displays a unique site reference code and site address, the selected trip rate calculation parameter and its value, the day of the week and date of each survey, and whether the survey was a manual classified count or an ATC count.*

*This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.*

*To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP\*FACT. Trip rates are then rounded to 3 decimal places.*

#### Parameter summary

Trip rate parameter range selected:	3300 - 13850 (units: sqm)
Survey date range:	01/01/13 - 10/06/19
Number of weekdays (Monday-Friday):	5
Number of Saturdays:	0
Number of Sundays:	0
Surveys automatically removed from selection:	0
Surveys manually removed from selection:	0

*This section displays a quick summary of some of the data filtering selections made by the TRICS® user. The trip rate calculation parameter range of all selected surveys is displayed first, followed by the range of minimum and maximum survey dates selected by the user. Then, the total number of selected weekdays and weekend days in the selected set of surveys are shown. Finally, the number of survey days that have been manually removed from the selected set outside of the standard filtering procedure are displayed.*

Total Rates:			0.020			0.017			0.037

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is:  $COUNT/TRP*FACT$ . Trip rates are then rounded to 3 decimal places.

Total Rates:			10.029			10.212			20.241

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is:  $COUNT/TRP*FACT$ . Trip rates are then rounded to 3 decimal places.

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is:  $COUNT/TRP*FACT$ . Trip rates are then rounded to 3 decimal places.

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is:  $COUNT/TRP*FACT$ . Trip rates are then rounded to 3 decimal places.

# E. Forecast Site Activity

## **Forecast Activity for Keltbray Use of Former MSD Facility**

### **Overview:**

Surveys undertaken of two existing Keltbray Facilities

Ashford in LB Hounslow

West Drayton on edge of LB Hillingdon

Surveys undertaken either side of the summer half-term (the week of the Jubilee bank holidays) with data collected for:

00:00 on Thursday 26 May 2022 to 24:00 on Friday 27 May

00:00 on Tuesday 7 June 2022 to 24:00 on Thursday 9 June 2022

### **Notes:**

The West Drayton site is made up of four plots on a private industrial estate, each accessed by the same cul-de-sac access road, which runs broadly north to south, with the connection to the wider public highway network located to the south. There are a significant number of movements to and from each of the plots. These movements are not directly to or from the public highway and have therefore not been included in the assessment of the impacts on the local highway network.

An additional allowance has been made for potential activity from another Keltbray site:

- Three members of staff will transfer to Ickenham, two of which will use LGVs to travel and one their own car
- Each member of staff will generate two trips per day (one inbound, one outbound)
- There will be 10 deliveries (20 movements) by van, assumed to be LGV
- There will be 6 deliveries by HGV (12 movements), assumed to be OGV1

Please note that there may be some rounding inconsistencies where the total does not equal the sum of the constituent movements
