Man 2 - Life cycle cost and service life planning?	Elemental Life Cycle Costing (2 credits)	1. A competent person carries out an outline, entire asset LCC plan at Process Stage 2 (equivalent to Concept Design - RIBA Stage 2) together with any design options appraisals in line with 'Standardised method of life cycle costing for construction procurement' PD 156865: 2008(6). 2. The elemental LCC plan: 2.a Provides an indication of future replacement costs over a period of analysis as required by the client (e.g. 20, 30, 50 or 60 years); 2.b Includes service life, maintenance and operation cost estimates. 3. Demonstrate, using appropriate examples provided by the design team, how the elemental LCC plan has been used to influence building and systems design and specification to minimise life cycle costs and maximise critical value.	1 to 3?		2		2	The developer is to commission Elemental Life Cycle Costing in accordance with relevant standards and demonstrate how the LCC plan has influenced the building and systems design and specification -See section details for definition of Elemental LCC Supporting evidence to include: 1. Elemental level LCC Plan	Contractor	NOT Set Up
	Component level LCC plan (1 credit)	4. A competent person develops a component level LCC options appraisal by the end of Process Stage 4 (equivalent to Technical Design – RIBA Stage 4) in line with PD 156865: 2008. The component level LCC includes : 4.a Envelope, e.g. cladding, windows, or roofing 4.b Services, e.g. heat source, cooling source, or controls 4.c Finishes, e.g. walls, floors or ceilings 4.d External spaces, e.g. alternative hard landscaping, boundary protection. 5. Demonstrate, using appropriate examples provided by the design team, how the component level LCC options appraisal has been used to influence building and systems design and specification to minimise life cycle costs and maximise critical value.	4,5?			1	1	The developer is to commission Component Life Cycle Costing in accordance with relevant standards and demonstrate how the LCC plan has influenced the building and systems design and specification -See section details for definition of Component LCC Supporting evidence to include: 1. Component level LCC options appraisal plan	Contractor	NOT Set Up
	Capital cost reporting (1 credit)	6. Report the capital cost for the building in pounds per square metre of gross internal floor area (Ek/ m²) as part of the submission to BRE	6	1			1	The developer will publish predicted capital cost at design stage in pounds per square metre of gross internal floor area (Ek/ m²) Supporting evidence to include: 1. Letter of commitment by developer - See draft letter	Client	NOT Set Up
Man 3 - Responsible Construction Practices Minimum Standards- One credit	Prerequisite	1. All timber and timber-based products used during the construction process of the project are 'legally harvested and traded timber'	1	y			0	Ensure all timber and timber based products will be legally sourced in line with FCS/PEFC including site timber Supporting evidence to include: 1. Letter of commitment by contractor - See draft letter	Contractor	NOT Set Up
	Environmental management - EMS System (1 credit)	3. All parties who at any stage manage the construction site (e.g. the principal contractor, the demolition contractor) operate an EMS covering their main operations. The EMS must: 3.a Be third party certified, to ISO 14001: 2015(10), EMAS (EU Eco Management and Audit Scheme) or equivalent standard; OR 3.b In compliance with BS 8555: 2016(11) have: 3.b.i Appropriate structure 3.b.ii Reached implementation stage phase four 'implementation and operation of the environmental management system' 3.b.iii Completed defined phase audits one to four. 4. All parties who at any point manage the construction site (e.g. the principal contractor, the demolition contractor) implement best practice pollution prevention policies and procedures on site in accordance with Working at construction and demolition sites: PPG6, Pollution Prevention Guidelines(12).	3,4	1			1	Contractor to have ISO 14001 accreditation in place and implement best practice pollution and prevention policies in line with the required standards Supporting evidence to include: 1. Letter of commitment by contractor - See draft letter	Contractor	NOT Set Up
	BREEAM AP (Site) (1 credit)	Prerequisite: 5. The client and the contractor formally agree performance targets. 6. Involve a BREEAM AP in the project at an appropriate time and level to: 6.a Work with the project team, including the client, to consider the links between BREEAM issues and assist them in achieving and if possible going beyond the design intent, to maximise the project's performance against the agreed performance targets throughout the Construction, Handover and Close Out stages. 6.b Monitor construction progress against the performance targets agreed throughout all stages where decisions critically impact BREEAM performance. 6.c Proactively identify risks and opportunities related to the procurement and construction process and the achievement of the targets agreed. 6.d Provide feedback to the constructors and the project team as appropriate, to support them in taking corrective actions and achieving their agreed performance targets. 6.e Monitor and, where relevant, coordinate the generation of appropriate evidence by the project team and the provision to the assessor.	5,6	1			1	BREEAM AP involved throughout Construction, Handover and Close Out stages to monitor construction progress against the agreed performance targets and providing relevant feedback to the project team Supporting evidence to include: 1. The AP appointment letter 2. Meeting notes/ recorded correspondence that can demonstrate BREEAM issues are a regular agenda item and AP attendance 3. The AP progress report (for each work stage)	BREEAM AP	NOT Set Up

Category	Assessment Issues	Compliance Requirements	BREEAM User Guide	Definite	Possible	Not Targeting	Max Credits Available	Design Stage (Assessor Notes)	Action/Responsible person	Tracker
<div>?</div>	Responsible construction management (up to 2 credits)	<p>The principal contractor evaluates the risks (on site and off site), plans and implements actions to minimise the identified risks including Vehicle movement, Pollution management, Tidiness, Health & Wellbeing, Security process, Training and awareness feedback, Monitoring & reporting</p> <p>One credit</p> <p>7. Achieve items listed as required for one credit in Table 4.1 Responsible construction management items (Refer to Table 4.1 of the BREEAM manual)</p> <p>Two credits</p> <p>8. Achieve criterion 7 above</p> <p>9. Achieve six additional items in Table 4.1 Responsible construction management items (Refer to Table 4.1 of the BREEAM manual)</p>	7 to 9 <div>?</div>	2			2	<p>Principal contractor to evaluate risks from construction activities and implement suitable actions to minimise the identified risks as outlined in Table 4.1 Responsible construction management items -See Section details for Table 4.1</p> <p>Supporting evidence to include:</p> <p>1. Company's policy and procedure documents (including environmental management, pollution prevention, security)</p> <p>2. Construction logistics plan</p> <p>3. Responsibility matrix</p> <p>4. Training records</p> <p>5. Photographic evidence</p> <p>6. Records of communication with the neighbouring community (e.g. letters, newsletters and campaigns)</p> <p>7. Contracts or formal agreements – Reporting documents and logs</p> <p>8. Reporting procedures</p> <p>9. Records of improvements and of no complaints</p> <p>10. Lessons learned</p>	Contractor	NOT Set Up
	Monitoring of construction-site impacts (up to 2 credits)	<p>10. Assign responsibility to an individual for monitoring, recording and reporting energy use, water consumption and transportation data (where measured) resulting from all on-site construction processes (and dedicated off-site manufacturing) throughout the build programme. To ensure the robust collection of information, this individual must have the appropriate authority and responsibility to request and access the data required. Where appointed, the BREEAM AP could perform this role</p>	10 to 22	2			2	<p>Principal contractor to monitor and report energy use and water consumption from on-site construction activities, as well as transport of materials and waste to and from site</p> <p>Supporting evidence to include:</p> <p>1. Letter of commitment by contractor - See draft letter</p>	Contractor	
Man 4 - Commissioning and Handover Minimum Standards- commissioning- test schedule and responsibilities AND Criterion 11 (Building User Guide)	Commissioning testing schedule and Responsibilities (1 credit)	<p>1. Prepare a schedule of commissioning and testing. The schedule identifies and includes a suitable timescale for commissioning and re-commissioning of all complex and non-complex building services and control systems and for testing and inspecting building fabric.</p> <p>2. The schedule identifies the appropriate standards for all commissioning activities to be conducted, where applicable, in accordance with Current Building Regulations, BSRIA guidelines(16), CIBSE guidelines(17), Other appropriate standards</p> <p>3. Where a building management system (BMS) is specified:</p> <p>3.a Carry out commissioning of air and water systems when all control devices are installed, wired and functional</p> <p>3.b Include physical measurements of room temperatures, off-coil temperatures and other key parameters, as appropriate, in commissioning results</p> <p>3.cThe BMS or controls installation should be running in auto with satisfactory internal conditions prior to handover</p> <p>3.d All BMS schematics and graphics (if BMS is present) are fully installed and functional to user interface prior to handover</p> <p>3.e Fully train the occupier or facilities team in the operation of the system.</p> <p>4. Appoint an appropriate project team member to monitor and programme pre-commissioning, commissioning and testing. Where necessary include re-commissioning activities on behalf of the client.</p> <p>5. The principal contractor accounts for the commissioning and testing programme, responsibilities and criteria within their budget and the main programme of works.</p>	1 to 5	1			1	<p>Appropriate project team member is to schedule commissioning including optimal timescales and appropriate testing and commissioning of all building services systems including BMS in line with best practice including inspecting, testing, identifying and rectifying defects via an appropriate method</p> <p>Supporting evidence to include:</p> <p>1. Letter of commitment by appropriate project team member - See draft letter</p>	Contractor	NOT Set Up
	Commissioning - design and preparation (1 credit)	<p>6. Achieve criteria 1 to 5</p> <p>7. During the design stage, the client or the principal contractor appoints an appropriate project team member , provided they are not involved in the general installation works for the building services systems, with responsibility for:</p> <p>7.a Undertaking design reviews and giving advice on suitability for ease of commissioning.</p> <p>7.b Providing commissioning management input to construction programming and during installation stages.</p> <p>7.c Management of commissioning, performance testing and handover or post-handover stages.</p> <p>For buildings with complex building services and systems, this role needs to be carried out by a specialist commissioning manager.</p>	6,7	1			1	See Above	Specialist commissioning manager/Contractor	
	Testing and inspecting building fabric (1 credit)	<p>8. Achieve criteria 1 to 5</p> <p>9.The commissioning and testing schedule and responsibilities credit is achieved.</p> <p>Complete post-construction testing and inspection to quality-assure the integrity of the building fabric, including continuity of insulation, avoidance of thermal bridging and air leakage paths (this is through airtightness testing and a thermographic survey). A suitably qualified professional undertakes the survey and testing in accordance with the appropriate standard.</p> <p>10. Rectify any defects identified during post-construction testing and inspection prior to building handover and close out. Any remedial work must meet the required performance characteristics for the building or element as defined at the design stage.</p>	8 to 10		1		1	<p>Thermographic survey and air-tightness testing to be carried out in line with the appropriate standards and any defects identified to be rectified during post-construction testing and inspection</p> <p>Supporting evidence to include:</p> <p>1. Programme of works</p> <p>2. Letter of appointment of Suitably Qualified Professional</p>	Contractor	NOT Set Up

BREEAM NEW CONSTRUCTION 2018										
Fully fitted out										
Category	Assessment Issues	Compliance Requirements	BREEAM User Guide	Definite	Possible	Not Targeting	Max Credits Available	Design Stage (Assessor Notes)	Action/Responsible person	Tracker
<div>?</div>	Handover (1 credit)	11. Prior to handover, develop two building user guides 11.a A non-technical user guide for distribution to the building occupiers. 11.b A technical user guide for the premises facilities managers. A draft copy is developed and discussed with users first (where the building occupants are known) to ensure the guide is most appropriate and useful to potential users. 12. Prepare two training schedules timed appropriately around handover and proposed occupation plans for the following users: 12.a A non-technical training schedule for the building occupiers. 12.b A technical training schedule for the premises facilities managers.	11,12	1			1	Principal Contractor to provide a non-technical & technical user guide and two training schedules for the building occupiers and premises facilities manager timed appropriately around handover and proposed occupation. Supporting evidence to include: 1. Letter of commitment by contractor- See draft letter	Contractor	NOT Set Up
<div>Man 5 - Aftercare</div> <div>Minimum Standards- One credit (commissioning-implementation)</div> <div>?</div>	Aftercare support (1 credit)	1. Provide aftercare support to the building occupiers through having in place operational infrastructure and resources. 1.a A meeting between the aftercare support team or individual, and the building occupier or management team (prior to initial occupation, or as soon as possible thereafter) to: 1.a.i Introduce the aftercare support available, including the content of the building user guide (where it exists) and training schedule. 1.a.ii Present key information on the building including the design intent and how to use the building to ensure it operates as efficiently and effectively as possible. 1.b On-site facilities management training including: 1.b.i a walkabout of the building AND 1.b.ii introduction to and familiarisation with the building systems, their controls and how to operate them in accordance with the design intent and operational demands. 1.c Provide initial aftercare support for at least the first month of building occupation, e.g. weekly attendance on-site, to support building users and management (the level of frequency will depend on the complexity of the building and building operations). 1.d Provide longer term aftercare support for occupiers for at least the first 12 months from occupation, e.g. a helpline, nominated individual or other appropriate system to support building users and management. 2. Establish operational infrastructure and resources to coordinate the collection and monitoring of energy and water consumption data for a minimum of 12 months, once the building is substantially occupied. This facilitates analysis of discrepancies between actual and predicted performance, with a view to adjusting systems and user behaviours accordingly.	1,2	1			1	Commitment by developer and contractor to put in place the necessary infrastructure and resources to provide aftercare support to the building occupier or management team and establish operational infrastructure to coordinate the collection and monitoring of energy and water consumption data for a minimum of 12 months, once the building is substantially occupied. Supporting evidence to include: 1. Letter of commitment by developer- See draft letter	Client	NOT Set Up
	Commissioning implementation (1 credit)	3. Complete the following commissioning activities over a minimum 12-month period, once the building becomes substantially occupied: 3.a Complex systems: The specialist commissioning manager will: 3.a.i Identify changes made by the owner or operator that might have caused impaired or improved performance. 3.a.ii Test all building services under full load conditions, i.e. heating equipment in mid-winter, cooling and ventilation equipment in mid-summer and under part load conditions (spring and autumn). 3.a.iii Where applicable, carry out testing during periods of extreme (high or low) occupancy. 3.a.iv Interview building occupants (where they are affected by the complex services) to identify problems or concerns regarding the effectiveness of the systems. 3.a.v Produce monthly reports comparing sub-metered energy performance to the predicted one. 3.a.vi Identify inefficiencies and areas in need of improvement. 3.a.vii Re-commission systems (following any work needed to serve revised loads), and incorporate any revisions in operating procedures into the operations and maintenance (O&M) manuals. 3.b Simple systems (naturally ventilated): The external consultant, aftercare team or facilities manager will: 3.i Review thermal comfort, ventilation, and lighting, at three, six and nine month intervals after initial occupation, either by measurement or occupant feedback. 3.ii Identify deficiencies and areas in need of improvement. 3.iii Re-commission systems and incorporate any relevant revisions in operating procedures into the O&M manuals.	3	1			1	Specialist Commissioning Manager or External consultant to undertake commissioning activities over a min 12 month period for the complex/ simple building systems proposed once the building becomes substantially occupied	Specialist Commissioning Manager	NOT Set Up
	Post occupancy evaluation (1 credit)	4. The client or building occupier makes a commitment to carry out a post-occupancy evaluation (POE) exercise one year after initial building occupation. 5.a A review of the design intent and construction process (review of design, procurement, construction and handover processes). 5.b Feedback from a wide range of building users including facilities management on the design and environmental conditions of the building covering: 5.b.i Internal environmental conditions (light, noise, temperature, air quality) 5.b.ii Control, operation and maintenance 5.b.iii Facilities and amenities 5.b.iv Access and layout 5.b.v Energy and water consumption 5.b.vi Other relevant issues, where appropriate 6. The independent party provides a report with lessons learned to the client and building occupiers. 7. The client or building occupier commits funds to pay for the POE in advance. This requires an independent party to be appointed to carry out the POE as described in criterion 5. Evidence of the appointment of the independent party and schedule of responsibilities which fulfils the BREEAM criteria are acceptable to demonstrate compliance.	4 to 7	1			1	The developer, in cooperation with the building occupier will commit to carrying out a post occupancy evaluation (POE) exercise one year after initial building occupation Supporting evidence to include: 1. Letter of commitment by developer - See draft letter	Client	NOT Set Up
SECTION CREDIT SCORE				8.905	1.571	0.524	21

Health & Wellbeing	Control of glare from sunlight (1 credit)	1. Identify areas at risk of glare using a glare control assessment. The glare control assessment also justifies any areas deemed not at risk of glare. 2.A glare control strategy designs out potential glare in all relevant building areas where risk has been identified. This should be achieved through building form and layout or building design measures. 3.The glare control strategy does not increase energy consumption used for lighting. This is achieved by: 3.a Maximising daylight levels in all weather, cloudy or sunny AND 3.b Ensuring the use or location of shading does not conflict with the operation of lighting control systems.	1 to 3 ?	1			1	A glare control assessment is used to determine the areas of the building that are at risk of glare. Compliant shading measures are specified in all relevant areas to avoid potential glare. Also, ensure glare control strategy does not increase energy consumption used for lighting - See Section details for Definition of relevant areas & Methodology Supporting evidence to include: 1. survey of or modelling of the relationship between sunlight and the building 2. Design studies demonstrating sunlight is prevented from reaching the eyes of building occupants, or the computer screens during occupied hours	Specification	NOT Set Up	
	Daylighting (up to 2 credits - building type dependent)	4. Daylighting criteria have been met using either of the following options: 4a The relevant building areas meet good practice daylight factors and other criteria as outlined in Table 5.1 and Table 5.2 (Refer to Table 5.1 and Table 5.2 of the BREEAM manual) 4.b The relevant building areas meet good practice average and minimum point daylight illuminance criteria as outlined in Table 5.3 (Refer to Table 5.3 of the BREEAM manual) Additional alternative route for healthcare building types only: 4.cThe relevant building areas meet the median daylight factors and minimum daylight factors in Table 5.4 (Refer to Table 5.4 of the BREEAM manual)	Industrial building ?	2			2	Relevant building areas to meet good practice daylight factors OR meet good practice average and minimum point daylight illuminance as outlined in Table 5.1: Minimum values of average daylight factor required, Table 5.2: Daylighting uniformity criteria and Table 5.3: Space type and illuminance requirements - See section details for Table 5.1, 5.2 & 5.3 & Definition of relevant areas Supporting evidence to include: 1. Design drawings 2. Daylight Calculations by appropriate consultant		NOT Set Up	
	View out (1 credit)	5. 95% of the floor area in 95% of spaces for each relevant building area is within 8 m of an external wall which has a window or permanent opening that provides adequate view out 6. The window/opening must be ≥ 20% of the surrounding wall area. Where the room depth is greater than 7m, compliance is only possible where the percentage of window/opening is the same as, or greater than, the values in table 1.0 of BS 82061 7. In addition, the building type criteria in Table 5.6 are applicable to view out criteria.(Refer to Table 5.6 of the BREEAM manual)	5 to 7	1			1	95% of the floor area in 95% of spaces for each relevant building area to be within 8 m of an external wall which has a window or permanent opening. Window/opening must be ≥ 20% of the surrounding wall area Supporting evidence to include: 1. Design drawings demonstrating appropriate view-out in relevant areas 2. Window Schedule		NOT Set Up	
	Internal and external lighting, zoning & control (1 credit)	Internal Lighting 8. Internal lighting in all relevant areas of the building is designed to provide illuminance (lux) levels and colouring rendering index in accordance with the SLL Code for Lighting 2012 (33) and any other relevant industry standard. Internal lighting should be appropriate to the tasks undertaken, accounting for building user concentration and comfort levels. 9. For areas where computer screens are regularly used, the lighting design complies with CIBSE Lighting Guide 7(34) sections 2.4, 2.13 to 2.15, 2.20, and 6.10 to 6.20. 9.a Limits to the luminance of the luminaires to avoid screen reflections. 9.b Any area where a surface is used to reflect light in to a space, such as uplighting, the recommendations refer to the luminance of the lit ceiling rather than the luminaire; a design team calculation is usually required to demonstrate this. 9.c Recommendations for direct lighting, ceiling illuminance, and average wall illuminance.	8 to 12	1			1	Internal/ external lighting to be designed in accordance with the relevant standards Supporting evidence to include: 1. Internal lighting layouts and schedules 2. External lighting layouts 3. Letter of formal confirmation of compliance by M&E consultant see draft letter of commitment sent under separate cover	M&E Specification	NOT Set Up	
		Zoning & Occupant Control 12. Internal lighting is zoned to allow for occupant control. Zoning is in accordance with the criteria below for relevant areas present within the building: 12.a In office areas, zones of no more than four workplaces 12.b Workstations adjacent to windows or atria and other building areas separately zoned and controlled 12.c Seminar and lecture rooms: zoned for presentation and audience areas 12.d Library spaces: separate zoning of stacks, reading and counter areas 12.e Teaching space or demonstration area 12.f Whiteboard or display screen 12.g Auditoria: zoning of seating areas, circulation space and lectern area 12.h Dining, restaurant, café areas: separate zoning of servery and seating or dining areas 12.i Retail: separate zoning of display and counter areas 12j Bar areas: separate zoning of bar and seating areas 12.k Wards or bedded areas: zoned lighting control for individual bed spaces and control for staff over groups of bed spaces 12.l Treatment areas, dayrooms, waiting areas: zoning of seating and activity areas and circulation space with controls accessible to staff. Areas used for teaching, seminar or lecture purposes have lighting controls provided in accordance with CIBSE Lighting Guide 5 (37) In addition, the building type criteria in Table 5.7 (Refer to Table 5.7 of the BREEAM manual)	8 to 12					Internal lighting to be appropriately zoned for occupant control in all relevant areas Supporting evidence to include: 1. Internal lighting layouts and schedules 2. External lighting layouts 3. Letter of formal confirmation of compliance by M&E consultant see draft letter of commitment sent under separate cover

Hea 02 - Indoor Air Quality	Prerequisite	1. A site-specific indoor air quality plan has been produced and implemented. The plan must be produced no later than the end of Concept Design. The objective of the plan is to facilitate a process that leads to design, specification and installation decisions and actions that minimise indoor air pollution during occupation of the building. An indoor air quality plan has been produced considering the following: 1.a Removal of contaminant sources 1.b Dilution and control of contaminant sources 1.c Procedures for pre-occupancy flush out 1.d Third party testing and analysis 1.e Maintaining indoor air quality in-us	1	y			0	A site specific Indoor Air Quality Plan is to be commissioned by the developers outlining actions/recommendations to minimise indoor air pollution during occupation Supporting evidence to include: 1. Copy of Indoor Air Quality Plan	Contractor	NOT Set Up
	Ventilation (1 credit)	2. The building has been designed to minimise the indoor concentration and recirculation of pollutants in the building as follows: 2.a Provide fresh air into the building in accordance with the criteria of the relevant standard for ventilation 2.b Ventilation pathways are designed to minimise the ingress and build-up of air pollutants inside the building 2.c Where present, HVAC systems must incorporate suitable filtration to minimise external air pollution, as defined in BS EN 13779:2007 Annex A3(46). The specified filters should achieve a minimum Indoor Air Quality of IDA2 2.d Areas of the building subject to large and unpredictable or variable occupancy patterns have carbon dioxide (CO ₂) or air quality sensors specified and: 2.d.i In mechanically ventilated buildings or spaces: sensors are linked to the mechanical ventilation system and provide demand-controlled ventilation to the space 2.d.ii In naturally ventilated buildings or spaces: sensors either have the ability to alert the building owner or manager when CO ₂ levels exceed the recommended set point, or are linked to controls with the ability to adjust the quantity of fresh air, i.e. automatic opening windows or roof vents 2.e For naturally ventilated or mixed mode buildings, the design demonstrates that the ventilation strategy provides adequate cross flow of air to maintain the required thermal comfort conditions and ventilation rates in accordance with CIBSE AM10(47).	2 to 5		1		1	Implementing robust means of ventilation design for naturally ventilated OR air-conditioned and mixed mode buildings in accordance with relevant standards. Areas of the building subject to large and unpredictable or variable occupancy patterns have carbon dioxide (CO ₂) or air quality sensors specified Supporting evidence to include: 1. Relevant sections/ clauses of the building specification or contract 2. Design Drawings	M&E Specification	NOT Set Up
	Emissions from construction products (up to 2 credits)	One credit 3. Three out of the five product types meet the emission limits, testing requirements and any additional requirements listed in Table 5.11 (Refer to Table 5.11 of the BREEAM manual) Where wood-based products are not one of three selected product types, all wood-based products used for internal fixtures and fittings must be tested and classified as formaldehyde E1 class as a minimum. Two Credits 4. All of the product types listed meet the emission limits, testing requirements and any additional requirements listed in Table 5.11 (Refer to Table 5.11 of the BREEAM manual)	6,7	1	1		2	Construction products listed within Table 5.11: Emission criteria by product type meet the emission limits, testing requirements and any additional requirements stated -See section details for Table 5.11 Supporting evidence to include: 1. Relevant sections/ clauses of the building specification or contract 2. Letter of commitment by contractor	Contractor	NOT Set Up
	Post-construction indoor air quality measurement (1 credit)	5. The formaldehyde concentration in indoor air is measured post construction (but pre-occupancy) and does not exceed 100 µg/ m³ averaged over 30 minutes (World Health Organization guidelines for indoor air quality: Selected pollutants, 2010 (58) 6. The formaldehyde sampling and analysis is performed in accordance with ISO 16000-2 (59) and ISO 16000-3 (60). 7. The total volatile organic compound (TVOC) concentration in indoor air is measured post construction (but pre-occupancy) and does not exceed 500 µg/ m³ over 8 hours. 8. The TVOC sampling and analysis is performed in accordance with ISO 16000-5 (61) and ISO 16000 6 (62) or ISO 16017-1 (63). 9. Where levels are found to exceed these limits, the project team confirms the measures that have, or will be, undertaken in accordance with the IAQ plan, to reduce the TVOC and formaldehyde levels to within the above limits. 10. The measured concentration levels of formaldehyde (µg/ m³) and TVOC (µg/ m³) are reported, via the BREEAM Scoring and Reporting Tool.	5 to 10		1		1	Post-construction formaldehyde & VOC concentration testing carried out to meet required levels in accordance with the relevant standards Supporting evidence to include: 1. Commitment by contractor to carry out necessary testing post-construction		NOT Set Up
	Thermal Modelling (1 credit)	1. Thermal modelling has been carried out using software in accordance with CIBSE AM111 Building Energy and Environmental Modelling 2. The software used to carry out the simulation at the detailed design stage provides full dynamic thermal analysis 3. The modelling demonstrates that: 3.a For air-conditioned buildings, summer and winter operative temperature ranges in occupied spaces are in accordance with the criteria set out in CIBSE Guide A Environmental design(79), Table 1.5; or other appropriate industry standard (where this sets a higher or more appropriate requirement or level for the building type) 3.b For naturally ventilated buildings: 3.b.i Winter operative temperature ranges in occupied spaces are in accordance with the criteria set out in CIBSE Guide A Environmental design, Table 1.5. Or other appropriate industry standard (where this sets a higher or more appropriate requirement or level for the building type) 3.b.ii The building is designed to limit the risk of overheating, in accordance with the adaptive comfort methodology outlined in either of the following standards as appropriate; CIBSE TM52: The limits of thermal comfort: avoiding overheating in European buildings(80) or CIBSE TM59: Design methodology for the assessment of overheating risk in homes(81) 4. For air-conditioned buildings, the PMV (predicted mean vote) and PPD (predicted percentage of dissatisfied) indices based on the above modelling are reported via the BREEAM assessment scoring and reporting tool.	1 to 4	1			1	Full dynamic thermal modelling to be undertaken in accordance with CIBSE AM11 standards and demonstrating compliance with criteria set out in CIBSE Guide A Environmental design(79), Table 1.5; or other appropriate industry standard and limiting risk of overheating in accordance with CIBSE TM52: The limits of thermal comfort: avoiding overheating in European buildings(80) Supporting evidence to include: 1. Letter of commitment by M&E consultant 2. Relevant sections/ clauses of the building specification or contract 3. Thermal modelling results	M&E/Energy Consultant	NOT Set Up

Hea 04 - Thermal Comfort				Design for future thermal comfort (1 credit)				5. Criteria 1 to 4 are achieved. 6. The thermal modelling demonstrates that the relevant requirements set out in criterion 3 above are achieved for a projected climate change environment. 7. Where criterion 6 above is not met, the project team demonstrates how the building has been adapted, or designed to be easily adapted in future using passive design solutions in order to subsequently meet the requirements under criterion 6 above 8. For air-conditioned buildings, the PMV and PPD indices based on the above modelling are reported via the BREEAM assessment scoring and reporting tool.												5 to 8		1						1		Dynamic modelling for a future climate change scenario with TRY weather data as detailed within the manual extract Supporting evidence to include: 1. Letter of commitment by M&E consultant 2. Relevant sections/ clauses of the building specification or contract 3. Thermal modelling results										NOT Set Up			
				Thermal zoning and controls (1 credit)				9. Criteria 1 above to 4 above are achieved. 10 The thermal modelling analysis has informed the temperature control strategy for the building and its users. 11 The strategy for proposed heating or cooling systems demonstrates that it has addressed the following: 11.a Zones within the building, and how the building services could efficiently and appropriately heat or cool these areas. For example consider the different requirements for the central core of a building compared with the external perimeter adjacent to the windows. 11.b The degree of occupant control required for these zones. This is based on discussions with the end user (or alternatively building type or use specific design guidance, case studies, feedback) and considers: 11.b.i User knowledge of building services 11.b.ii Occupancy type, patterns and room functions (and therefore appropriate level of control required) 11.b.iii How the user is likely to operate or interact with the systems, e.g. are they likely to open windows, access thermostatic radiator valves (TRV) on radiators, change air-conditioning settings etc. 11.b.iv The user expectations (this may differ in the summer and winter) and degree of individual control (i.e. obtaining the balance between occupant preferences, for example some occupants like fresh air and others dislike draughts) 11.c How the proposed systems will interact with each other (where there is more than one system) and how this may affect the thermal comfort of the building occupants 11.d The need or otherwise for an accessible building user actuated manual override for any automatic systems.												9 to 11		1						1		The thermal modelling analysis has informed the temperature control strategy for the building and its users. Supporting evidence to include: 1. Thermal comfort strategy highlighting the points that have been considered and decisions taken accordingly 2. Design drawings												NOT Set Up	
Hea 05 - Acoustic Performance				Acoustic performance (up to 4 credits)				Up to three credits - Acoustic performance For all building types, except Residential institutions (short term and long term stay), which have four credits available below. 1 .The building meets the appropriate acoustic performance standards and testing requirements defined in the relevant table below. (Refer to Table 5.14 to 5.17 of the BREEAM manual) These tables define criteria for the acoustic principles of: 1.a Sound insulation 1.b Indoor ambient noise level 1.c Room acoustics. OR 2. A suitably qualified acoustician (SQA) is appointed to define a bespoke set of performance requirements for all function areas in the building. The bespoke performance requirements use the three acoustic principles defined in criterion Hea 05 Acoustic performance - Criterion 1 above, setting out the performance requirements for each and the testing regime required. Up to four credits - Acoustic performance for Residential institutions (short term and long term stay) 3.The building meets the appropriate acoustic performance standards and testing requirements defined in the relevant table(Refer to Table 5.19 of the BREEAM manual) These tables define criteria for the acoustic principles of: 3.a Sound insulation 3.b Indoor ambient noise level 3.c Room acoustics.												Residential Building				3				3		The building meets the appropriate acoustic performance standards and testing requirements defined within the Tables 5.14 to 5.17. A suitably qualified acoustician is to be appointed to define a bespoke set of performance requirements for all function areas in the building - See Section details for Table 5.14 to 5.17 Supporting evidence to include: 1. Professional report/ study and calculations from the acoustician 2. Letter of appointment 3. Formal letter from the project team regarding commitments								Suitably Qualified Acoustician		NOT Set Up			
Hea 06 - Security				Security of site and building (1 credit)				1. A Suitably Qualified Security Specialist (SQSS) conducts an evidence-based Security Needs Assessment (SNA) during or prior to Concept Design (RIBA Stage 2 or equivalent). The purpose of the SNA will be to identify attributes of the proposal, site and surroundings which may influence the approach to security for the development . 2. The SQSS develops a set of security controls and recommendations for incorporation into the proposals. Those controls and recommendations shall directly relate to the threats and assets identified in the preceding SNA. 3. The controls and recommendations shall be incorporated into proposals and implemented in the as-built development. Any deviation from those controls and recommendations shall be justified and agreed with the SQSS.												1 to 3		1						1		A Suitably Qualified Security Specialist (SQSS) conducts an evidence-based Security Needs Assessment for the project and recommendations to be incorporated within the proposal Supporting evidence to include: 1. Correspondence from or a copy of the report/ feedback from the ALO/CPDA/Security Consultant confirming: - Scope of their advice/ involvement - The stage of design in which their advice was sought - Summary of their recommendations								Contractor		NOT Set Up

<div>?</div>	Sub-metering of high energy load and tenancy areas (1 credit)	4. Monitor a significant majority of the energy supply with: 4.a An accessible energy monitoring and management system for: 4.a.i tenanted areas or 4.a.ii relevant function areas or departments in single occupancy buildings. OR 4.b Separate accessible energy sub-meters with pulsed or other open protocol communication outputs for future connection to an energy monitoring and management system for: 4.b.i tenanted areas or 4.b.ii relevant function areas or departments in single occupancy buildings. 5. Sub-meter per floor plate in large single occupancy or single-tenancy buildings with one homogeneous function, for example hotel bedrooms, offices.	4,5	1			1	Relevant tenanted/ function areas to be separately metered within the building Supporting evidence to include: 1. Schematics/ design drawings indicating sub-meters 2. Letter of commitment by M&E consultant		NOT Set Up	
Ene 03 - External lighting <div>?</div>	External Lighting (1 credit)	1. No external lighting (which includes lighting on the building, at entrances and signs). OR 2 External light fittings within the construction zone with: 2.a Average initial luminous efficacy of not less than 70 luminaire lumens per circuit Watt 2.b Automatic control to prevent operation during daylight hours 2.c Presence detection in areas of intermittent pedestrian traffic.	1,2	1			1	External lighting to be low energy and controlled by time switch or daylight control and presence detection in areas of intermittent pedestrian traffic Supporting evidence to include: 1. Relevant sections/ clauses of the building specification or contract 2. Design drawings showing appropriate controls 3. Letter of commitment by M&E consultant	M&E Consultant	NOT Set Up	
Ene 04 - Low Carbon Design <div>?</div>	Passive design analysis (1 credit)	1. Achieve the first credit Assessment scope - One credit - Thermal modelling to demonstrate that the building design delivers appropriate thermal comfort levels in occupied spaces. 2. The project team analyses the proposed building design and development during Concept Design to identify opportunities for the implementation of passive design measures. 3 Implement passive design measures to reduce the total heating, cooling, mechanical ventilation, lighting loads and energy consumption in line with the passive design analysis findings. 4. Quantify the reduced total energy demand and carbon dioxide (CO ₂) emissions resulting from the passive design measures.	1 to 4	1			1	The first credit under Hea 04-Thermal modelling is achieved Thereafter, the design team have considered appropriate passive design strategies that will be incorporated into the final design and report on reduction in CO ₂ emissions Supporting evidence to include: 1. The feasibility study report 2. Results from a dynamic simulation model demonstrating the reduced energy demand and CO ₂ emissions from the specified passive design measures.	Energy Consultant	NOT Set Up	
		Free Cooling (1 credit)	5. Achieve the passive design analysis credit. 6. Include a free cooling analysis in the passive design analysis carried out under criterion2. 7. Identify opportunities for the implementation of free cooling solutions. 8. The building is naturally ventilated or uses any combination of the free cooling strategies listed in Free cooling analysis	5 to 8		1		1	Include a free cooling analysis in the passive design analysis carried out for the project and incorporate relevant free cooling strategies within the design Supporting evidence to include: 1. The feasibility study report 2. Results from a dynamic simulation model and other used methods demonstrating that the free cooling strategy can meet the building's cooling demand.		NOT Set Up
	Low or zero carbon technologies (1 credit)		9. An energy specialist completes a feasibility study by the end of Concept Design. 10. Establish the most appropriate recognised local (on-site or near-site) low or zero carbon (LZC) energy sources for the building or development, based on the feasibility study. 11. Specify local LZC technologies for the building or development in line with the feasibility study recommendations. 12. Quantify the reduced regulated carbon dioxide (CO ₂) emissions resulting from the feasibility study.	9 to 12	1			1	An LZC feasibility study has also been commissioned and the appropriate technology will be utilised to further reduce carbon emissions Supporting evidence to include: 1. The feasibility study report 2. Results from a dynamic simulation model demonstrating reductions in CO ₂ emissions from the specified low zero carbon technology.	Energy Consultant	NOT Set Up

Ene 05 - Energy Efficient Cold Storage?	Refrigeration Energy Consumption (1 credit)	1. Design, install and commission the refrigeration system: 1.a In accordance with the Code of Conduct for carbon reduction in the refrigeration retail sector(124) and BS EN 378-2:2016(125). 1.b Using robust and tested refrigeration systems or components included on the Enhanced Capital Allowance (ECA) Energy Technology Product List (ETPL)(126) or an equivalent list 2. Commission the refrigeration plant in compliance with the commissioning criteria in BREEAM issue Man 04 Commissioning and handover	-				-	Not Applicable		NOT Set Up
	Indirect Greenhouse gas emissions (1 credit)	3. Achieve criteria 1 and 2. 4. Demonstrate a saving in indirect greenhouse gas emissions (CO ₂ -eq) from the installed refrigeration system over the course of its operational life.	-				-	Not Applicable		NOT Set Up
Ene 06- Energy Efficient Transportation Systems?	Energy consumption (1 credit)	1. For specified lifts, escalators or moving walks (transportation types): 1.a Analyse the transportation demand and usage patterns for the building to determine the optimum number and size of lifts, escalators or moving walks 1.b Calculate the energy consumption in accordance with BS EN ISO 25745 Part 2(131) or Part 3(132) for one of the following: 1.b.i At least two types of system for each transportation type required OR 1.b.ii An arrangement of systems, for example for lift systems, hydraulic, traction, machine room-less lift (MRL) OR 1.b.iii A system strategy that is 'fit for purpose' 1.c Consider the use of regenerative drives, subject to the requirements in Regenerative drives below 1.d Specify the transportation system with the lowest energy consumption.	1?	1			1	The developers will undertake an analysis of different lifts, escalators or moving walks specified to determine optimum alternatives The selected lift system will also incorporate energy efficient systems within the design Supporting evidence to include: 1. Professional report/study of transportation analysis and calculations	Lift Supplier	NOT Set Up
	Energy efficient feature - (2 credits)	2. Achieve criterion 1 above 3. Specify the following three energy efficient features for each lift: 3.a A standby condition for off-peak periods 3.b The lift car lighting and display lighting provides an average luminous efficacy across all fittings in the car of > 70 luminaire lumens per circuit Watt 3.c Use of a drive controller capable of variable speed, variable-voltage, and variable-frequency (VVVF) control of the drive motor. 4. Specify regenerative drives where their use is demonstrated to save energy.	2 to 4?	1			2	As Above		NOT Set Up
Ene 07 - Energy Efficient Laboratory Systems	Design Specification (1 credit)	Engage with the client during the preparation of the initial project brief to determine occupant requirements and define laboratory performance criteria. Performance criteria will include, but not be limited to: 1.a Description of purpose 1.b Occupant or process activities 1.c Containment requirements and standards 1.d Interaction between systems 1.e Flexibility and adaptability of laboratory facilities. 1.f Any other specific requirements (for example, requirements relevant to ventilation, heating or cooling). 2. Size the services system equipment (including ventilation supply and extract) correctly 3. Demonstrate the minimised energy demand of the laboratory facilities resulting from the achievement of the defined design performance criteria. Laboratory containment devices and containment areas (criteria only applicable to buildings containing these facilities) 4 For ducted fume cupboards specified: 4.a Demonstrate that the average design air flow rate is no greater than 0.16 m³/s per linear metre (internal width) of fume cupboard workspace 4.b Measure the volume flow rate in the exhaust duct (at the boundary of the laboratory) to take account of reductions in (inward) volume flow rate from fume cupboard leakage 4.c Demonstrate that a reduction in air flow does not compromise the defined performance criteria and does not increase the health and safety risk to future building occupants.	-				-	Not Applicable		NOT Set Up

?				Best practice energy efficient measures (up to 4 credits)				If the laboratory area accounts for at least 10% of the total building floor area 5. Achieve criteria 1 to 4 above (or criteria 1 to 3 above where there are no ducted fume cupboards). 6. Design, specify and install laboratory plant and systems to promote energy efficiency. Demonstrate compliance with items in Table 6.4 below (Refer to Table 6.4 of the BREEAM manual) 6.a Up to 2 credits: laboratory areas) account for at least 10% (but less than 25%) of the total building floor area OR 6.b Up to 4 credits: laboratory areas account for 25% or more of the total building floor area. 7. Demonstrate by calculations or modelling that the chosen measures have a reasonably significant effect on the total energy consumption of the laboratory, i.e. 2% reduction or greater. 8. Demonstrate that the energy efficient measures specified do not compromise the defined performance criteria, and do not increase the health and safety risk to future building occupants.																																Not Applicable																NOT Set Up							
Ene 08 - Energy Efficient Equipment				Energy Efficient Equipment (2 credits)				1. Identify the building's unregulated energy consuming loads. Estimate their contribution to the total annual unregulated energy consumption of the building, assuming a typical or standard specification. 2. Identify the systems or processes that use a significant proportion of the total annual unregulated energy consumption of the building. 3. Demonstrate a meaningful reduction in the total annual unregulated energy consumption of the building. Table 6.5 lists some examples of significant contributors to unregulated energy consumption, and the associated criteria. If additional significant contributors, not listed in the table, will be specified, the design team should justify how a meaningful reduction will be achieved for these contributors. (Refer to Table 6.5 of the BREEAM manual)												1 to 3				2												2				Project team to identify all unregulated energy consuming loads within the building and estimate their contribution to the total annual unregulated consumption thereby demonstrating a meaningful reduction in energy consumption Supporting evidence to include: 1. Relevant section/clauses of the building specification or contract 2. Manufacturers product details 3. Documentation confirming compliance with the relevant scheme or standard outlined in the criteria 4. Design drawings and/ or calculations												Specification				NOT Set Up							
SECTION CREDIT SCORE																				10.000				5.333				0.000				24																															
Tra 01 - Transport assessment and travel plan				Travel plan (2 credits)				1. During the feasibility and design stages, develop a travel plan based on a site-specific travel assessment or statement. 2. The site-specific travel assessment or statement covers as a minimum: 2.a Existing travel patterns and opinions of existing building or site users towards cycling and walking, identifying constraints and opportunities, if relevant 2.b Travel patterns and transport impact of future building users 2.c Current local environment for walkers and cyclists (accounting for visitors who may be accompanied by young children) 2.d Reporting of the number and type of existing accessible amenities, see Table 7.1, within 500m of the site (Refer to Table 7.1 of the BREEAM manual) 2.e Disabled access (accounting for varying levels of disability and visual impairment) 2.f Calculation of the existing public transport Accessibility Index (AI), 2.g Current facilities for cyclists 3. The travel plan includes proposals to increase or improve sustainable modes of transport and movement of people and goods during the building's operation and use, see Methodology on the next page. 4. If the occupier is known, involve them in the development of the travel plan. 5. Demonstrate that the travel plan will be implemented post construction and be supported by the building's management in operation.												?				1 to 5				2												2				Please provide commitment to develop and publish a travel plan or statement specific to the assessed building and its users.- see draft letter. Please provide a specific travel plan, see section detail for Travel plan measures examples and table 7.1 for amenities examples to be included. Please provide design drawings demonstrating examples of design measures implemented in support of the travel plan findings.												Project Team				NOT Set Up			
Tra 02 - Sustainable transport measures				Transport options implementation (10 credits)				Prerequisite 1. Achieve the Tra 01 Transport assessment and travel plan credits. 2. Identify the sustainable transport measures, listed in Table 7.4 (Refer to Table 7.1 of the BREEAM manual) 3. Award credits according to the Accessible Index (AI) of the project, and the total number of points achieved for the options implemented, listed in Table 7.3 (Refer to Table 7.3 of the BREEAM manual)												?				1 to 3				8				2				10				Pre-requisite: Achieve the Tra 01 Transport assessment and travel plan credits. Cr 2-3: Team to identify sustainable transport measures proposed as outlined within Table 7.4:Sustainable public, private and active transport measures Please see section details for relevant options. ?	Substructure and hard landscaping options appraisal during Concept Design (all building types) (1 credit)	6. Criteria 3 and 4 are achieved. 7. During Concept Design identify opportunities for reducing environmental impacts as follows: 7.a Carry out building LCA options appraisal of a combined total of at least six significantly different substructure or hard landscaping design options (at least two shall be substructure and at least two shall be hard landscaping). 7.b Using a building LCA tool that is recognised by BREEAM (as suitable for assessing substructure and hard landscaping during Concept Design) according to the methodology 7.c As criteria 4.c to 4.f above	Building type dependant?			1	1	Carry out building LCA options appraisal of a combined total of at least six significantly different substructure or hard landscaping design options Supporting evidence to include: 1. As criteria 3 to 4 (Criteria 6-7) – The LCA options appraisal summary document includes substructure and hard landscaping according to the criteria 2. As criteria 3 to 4 (Criteria 8-9) – The LCA options appraisal summary document includes core building services according to the criteria 3. As criteria 5 (Criteria 10-14) – The 'elemental LCC plan' and 'Component level LCC option appraisal; in issue Man 02 Life cycle cost and service life planning'. 4. The third party's report: (Criteria 15-18) – Verifying that building LCAs accurately represent the designs under consideration. – Itemising the findings of their verification checks. – Evidence that the requirements of a Suitably qualified third party are fulfilled. See table 9.2 in the section detail.		NOT Set Up
	Mat 02 - Environmental impacts from construction products - Environmental Product Declarations (EPD)?	Specification of products with a recognised environmental product declaration (EPD) (1 credit)	1,2?		1		1	Please specify construction products with EPD that achieve a total EPD points score of at least 20, according to the BREEAM Methodology Supporting evidence to include: 1. The Mat 01/02 Results Submission tool 2. Copies of EPD certificates See table 9.8 for EPD points for different type of EPD and table 9.9 for material classification within the section detail.	Principal Contractor/Tender/ Specification	NOT Set Up
Mat 03 - Responsible Sourcing of Materials Minimum Standards-criterion 1 only	Prerequisite	1. All timber and timber-based products used on the project are legally harvested and traded timber as per the UK Government's Timber Procurement Policy (TPP)	1?	y			y	MANDATORY- Please provide letter of commitment to confirm all timber will be legally sourced in line with FCS/PEFC- see draft	Contractor	NOT Set Up
	Enabling sustainable procurement (1 credit)	2. A sustainable procurement plan must be used by the design team to guide specification towards sustainable construction products. The plan must: 2.a Be in place before Concept Design. 2.b Include sustainability aims, objectives and strategic targets to guide procurement activities. Note: targets do not need to be achieved for the credit to be awarded but justification must be provided for targets that are not achieved. 2.c Include a requirement for assessing the potential to procure construction products locally. There must be a policy to procure construction products locally where possible. 2.d Include details of procedures in place to check and verify the effective implementation of the sustainable procurement plan. In addition, if the plan is applied to several sites or adopted at an organisational level it must: 2.e Identify the risks and opportunities of procurement against a broad range of social, environmental and economic issues following the process set out in BS ISO 20400:2017(170).	2?	1			1	Please provide a sustainable procurement plan in line with the criteria requirements. See section details for relevant definition.	Contractor	NOT Set Up

For example, certificates 2. Completed copy of the Mat 03 Calculator tool 3. Evidence to show how the Mat 03 calculator tool has been completed								Contractor		NOT Set Up			
<div>?</div>				Protecting vulnerable parts of the building from damage				1. Protection measures are incorporated into the building's design and construction to reduce damage to the building's fabric or materials in case of accidental or malicious damage occurring. These measures must provide protection against: 1.a Negative impacts of high user numbers in relevant areas of the building (e.g. corridors, lifts, stairs, doors etc.). 1.b Damage from any vehicle or trolley movements within 1m of the internal building fabric in storage, delivery, corridor and kitchen areas. 1.c External building fabric damage by a vehicle. Protection where parking or manoeuvring areas are within 1 metre of the building façade and where delivery areas or routes are within 2. metres of the façade, i.e. specifying bollards or protection rails. 1.d Potential malicious damage to building materials and finishes, in public and common areas where appropriate.												1 to 4 <div>?</div>		1						1		Please provide drawings to show areas of vulnerability from damage and material degradation (to high pedestrian use, material degradation due to environmental factors, etc.). Please provide relevant sections/ clauses of the building specification or contract confirming the durability and protection measures specified - written statement for protecting exposed parts of the building from material degradation for all the relevant areas.								Architects		NOT Set Up			
<div>?</div>				Protecting exposed parts of the building from material degradation (1 credit)				2. Key exposed building elements have been designed and specified to limit long and short term degradation due to environmental factors. This can be demonstrated through one of the following: 2.a The element or product achieving an appropriate quality or durability standard or design guide, see Table 9.14 (Refer to Table 9.14 of the BREEAM manual). If none are available, use BS 7543:2015(172) as the default appropriate standard OR 2.b A detailed assessment of the element's resilience when exposed to the applicable material degradation and environmental factors. 3. Include convenient access to the roof and façade for cost-effective cleaning, replacement and repair in the building's design. 4. Design the roof and façade to prevent water damage, ingress and detrimental ponding.												1 to 4 <div>?</div>										See section details for examples on suitable durability measures. See section details for the list of relevant industry durability and quality standards than can be used on table 9.14 for option 2a. See section details for the list of relevant industry durability and quality standards than can be used on table 9.14.								Architects					
<div>?</div>				Material Efficiency (1 credit)				1. At the Preparation and Brief and Concept Design stages, set targets and report on opportunities and methods to optimise the use of materials. These must be done for each of the following stages. (Refer to Table 9.15 of the BREEAM manual) 1.a Preparation and Brief 1.b Concept Design 1.c Developed Design 1.d Technical Design 1.e Construction 2. Develop and record the implementation of material efficiency, see Table 9.15, during: 2.a Developed Design 2.b Technical Design 2.c Construction 3. Report the targets and actual material efficiencies achieved.												1 to 3 <div>?</div>				1				1		Please provide 1. Strategic brief/ written statement to include section on material efficiency which identifies client aspirations and objectives 2. Resource management plan to include accurate waste forecasts, opportunities to design out waste and increase reclaimed content See section details for material efficiency opportunities examples along with table 9.15 for material efficiency strategy.										NOT Set Up

	Wst 01 - Construction Waste Management?	Pre-demolition audit (1 credit)	1. Complete a pre-demolition audit of any existing buildings, structures or hard surfaces being considered for demolition. This must be used to determine whether refurbishment or reuse is feasible and, in the case of demolition, to maximise the recovery of material for subsequent high grade or value applications. The audit must cover the content of Pre-demolition audit scope and: 1.a Be carried out at Concept Design stage (RIBA Stage 2) by a competent person prior to strip-out or demolition works 1.b Guide the design, consider materials for reuse and set targets for waste management 1.c Engage all contractors in the process of maximising high grade reuse and recycling opportunities 1.d Compare actual waste arisings and waste management routes used with those forecast and investigate significant deviations from planned targets. 2. Make reference to the audit in the resource management plan (RMP)	1,2?	1			1	Supporting evidence to include: Please provide copy of pre-demolition audit - see Section Details for requirements	Contractor	NOT Set Up
		Construction waste resource efficiency (up to 3 credits)	3. Prepare a compliant Resource Management Plan (RMP) covering: 3.a Non-hazardous waste materials (from on-site construction and dedicated off-site manufacture or fabrication, including demolition and excavation waste 3.b Accurate data records on waste arisings and waste management routes. 4. Meet or improve upon the benchmarks in Table 10.1 for non-hazardous construction waste, excluding demolition and excavation waste. (Refer to Table 10.1 of the BREEAM manual)	3,4?	2	1		3	Supporting evidence to include: Prepare a compliant Resource Management Plan (RMP) covering non-hazardous waste materials, including demolition and excavation waste - see sections details for content. Include commitment to improve upon the benchmarks in Table 10.1 for non-hazardous construction waste, excluding demolition and excavation waste. (see Section Details)	Contractor	NOT Set Up
		Diversion of resources from landfill (1 credit)	5. Meet, where applicable, the diversion from landfill benchmarks in Table 10.2 for non-hazardous construction waste and demolition and excavation waste generated.(Refer to Table 10.2 of the BREEAM manual) 6. Sort waste materials into separate key waste groups as per Table 10.3 on page 249, either on-site or through a licensed contractor for recovery.(Refer to Table 10.3of the BREEAM manual)	5,6?	1			1	Supporting evidence to include: Please include commitment to divert waste from landfill within the submitted RMP - see tables in Section Details	Contractor	NOT Set Up
	-										
	Wst 02 - Use of recycled and sustainably sourced aggregates Fully?	Pre-requisite	1. If demolition occurs on site, to encourage the reuse of site-won material on site, complete a pre-demolition audit of any existing buildings, structures or hard surfaces in accordance with Assessment scope - Wst 01 Pre-demolition audit	1 to 6?					Prerequisite - See Section Details (Wst 01) for details of pre-demolition audit	Structural engineer	NOT Set Up
		Project Sustainable Aggregate Points (1 credit)	2. Identify all aggregate uses and types on the project Table 10.5 and Table 10.6 (Refer to Table 10.5 and Table 10.6 of the BREEAM manual) 3. Determine the quantity in tonnes for each identified use and aggregate type. 4. Identify the region in which the aggregate source is located. 5. Calculate the distance in kilometres travelled by all aggregates by transport type. 6. Enter the information into the BREEAM Wst 02 calculator to calculate the Project Sustainable Aggregate points.	1 to 6?			1	1	See Compliance Requirments for guidance See Section Details for methodology and Tables 10.5 and 10.6	Contractor	NOT Set Up
	-										
	Wst 03 - Operational Waste?	Operational Waste (1 credit)	1. Provide a dedicated space for the segregation and storage of operational recyclable waste generated. The space is: 1.a Clearly labelled, to assist with segregation, storage and collection of the recyclable waste streams 1.b Accessible to building occupants or facilities operators for the deposit of materials and collections by waste management contractors 1.c Of a capacity appropriate to the building type, size, number of units (if relevant) and predicted volumes of waste that will arise from daily or weekly operational activities and occupancy rates. 2. For consistent and large amounts of operational waste generated, provide: 2.a Static waste compactors or balers; situated in a service area or dedicated waste management space 2.b Vessels for composting suitable organic waste OR adequate spaces for storing segregated food waste and compostable organic material for collection and delivery to an alternative composting facility 2.c A water outlet provided adjacent to or within the facility for cleaning and hygiene purposes where organic waste is to be stored or composted on site.	1,2?	1			1	Supporting evidence to include: 1.Complete and return draft letter wording 2.Please provide GA drawings with bin storage marked For building with high volumes of waste, health care and building with residential uses - see Section details	Architects	NOT Set Up
	-										
	Wst 04 - Speculative finishes (Offices only)?	Speculative Floor and Ceiling finishes (1 credit)	1. For tenanted areas, where the future occupant is not known and carpets or other floor or ceiling finishes are installed, these must be limited to a show area only. 2. Only install floor and ceiling finishes selected by the known occupant of a development. Alternatively, where only ceiling finishes and no carpets are installed, the building owner confirms that the first tenants will not be permitted to make substantial alterations to the ceiling finishes	1,2				1	Not Applicable	Architects	NOT Set Up

LE 02 - Identifying and understanding the risks and opportunities for the project	Survey and evaluation (1 credit)	Route 1 3. Completion of the BREEAM Ecological Risk Evaluation Checklist indicates Assessment route 1 can be used as the assessment Route 2 4. An appropriate individual is appointed at a project stage that ensures early involvement in site configuration and, where necessary, can influence strategic planning decisions. 5. Prior to the completion of the preparation and brief, an appropriate level of survey and evaluation (see Assessment route 2: For sites where complex ecological systems are likely to be present) has been carried out to determine the ecological baseline of the site, taking account of the zone of influence to establish: 5.a Current and potential ecological value and condition of the site, and related areas within the zone of influence. 5.b Direct and indirect risks to current ecological value 5.c Capacity and feasibility for enhancement of the ecological value of the site and, where relevant, areas within the zone of influence. 6. Data are collated and shared with project team to inform the site preparation, design or construction works.	3 to 6	1			1	Please provide a copy of the Ecological Survey and Evaluation document. Note: A phase 1 habitat assessment or other equivalent type of assessment can act as acceptable evidence as long as it can be shown that they cover the content of the assessment criteria. Please complete and return draft letter	Suitably Qualified Ecologist/Contractor	NOT Set Up
	Determining the ecological outcomes for the site (Routes 1 and 2) (1 credit)	(Routes 1 and 2) 7. Survey and evaluation criteria (criteria 3–6 above) relevant to the chosen route have been achieved. 8. During Concept Design, the project team liaise and collaborate with representative stakeholders to identify and consider ecological outcome for the sites (appropriate to the scale and type of development) for the project. 9. When determining the ecological outcome for the site, this must involve the identification, appraisal and selection of specific solutions and measures sufficiently early to influence key project planning decisions. This must be done in accordance with the following hierarchy of action: 9.a avoidance 9.b protection 9.c reduction or limitation of negative impacts 9.d on site compensation and, 9.e enhancement, considering the capacity and feasibility within the site, or where viable, off-site. 10. Following this the optimal ecological outcome for the site is selected after liaising with representative stakeholders and the project team.	7 to 10	1			1	As Above	Suitably Qualified Ecologist/Contractor	NOT Set Up
LE 03 - Managing negative impacts on ecology	Prerequisite – Identification and understanding the risks and opportunities for the site	1. LE 02 has been achieved. 2. The client or contractor has confirmed that compliance is monitored against all relevant UK, and EU or International legislation relating to the ecology of the site	1,2	y			0	It is STRONGLY recommended that a suitably qualified ecologist is appointed to undertake a formal BREEAM 2018 compliant site appraisal and report.	Client/Contractor	NOT Set Up
	Planning, liaison, implementation and data (1 credit)	3. Roles and responsibilities have been clearly defined, allocated and implemented to support successful delivery of project outcomes at an early enough stage to influence the concept design or design brief. 4. Site preparation and construction works have been planned for and are implemented at an early project stage to optimise benefits and outputs. 5. The project team liaising and collaborating with representative stakeholders, taking into consideration data collated and shared, have implemented solutions, and measures have been selected during site preparation and construction works.	3 to 5	1			1	Please ensure ecologist completes Guidance Note 40 (available on request) and to complete the BREEAM Change in Ecological Value Calculator	Client/Contractor	NOT Set Up
	Managing negative impacts of the project (up to 2 credits)	Route 1 6. Negative impacts from site preparation and construction works have been managed according to the hierarchy (see Methodology) and no net impact has resulted. Route 2 7 Negative impacts from site preparation and construction works have been managed according to the hierarchy (see Assessment route 2: For sites where complex ecological systems are likely to be present) and either: 7.a No overall loss of ecological value has occurred (2 credits) OR 7.b The loss of ecological value has been limited as far as possible (1 credit)	6,7	2			2	Please ensure ecologist completes Guidance Note 40 (available on request) and to complete the BREEAM Change in Ecological Value Calculator and reports accordingly	Suitably Qualified Ecologist/Contractor	NOT Set Up
	Prerequisite - Identifying and understanding the risks and opportunities for the project	1. LE 03 has been achieved. Including the following, specific to the aims of this issue: 1.a Roles and responsibilities have been clearly defined, allocated and implemented to support successful delivery of project outcomes. 1.b Site preparation and construction works have been planned for and implemented at a stage that is sufficiently early in the project to optimise benefits and outputs. 2. The client or contractor confirms compliance is monitored against all relevant UK, EU or international legislation relating to the ecology of the site	1,2	y			0	It is STRONGLY recommended that a suitably qualified ecologist is appointed to undertake a formal BREEAM 2018 compliant site appraisal and report. LE 04 - Change and enhancement of ecological value	Liaison, implementation and data collation (1 credit)	Route 2 5 The project team liaising and collaborating with representative stakeholders, taking into consideration data collated and shared, have implemented the solutions and measures selected in a way that enhances ecological value in the following order: 5.a On site, and where this is not feasible 5.b Off site within the zone of influence	5	1			1	Please ensure ecologist completes Guidance Note 40 (available on request) and to complete the BREEAM Change in Ecological Value Calculator	Client/Contractor	NOT Set Up
	Enhancement of ecology (up to 3 credits)	Route 1 3. The project team liaising and collaborating with representative stakeholders, taking into consideration data collated and shared, have implemented solutions and measures based on recommendations from recognised 'local' ecological expertise, specialist input and guidance to inform the adoption of locally relevant ecological solutions and measures which enhance the site. 4. Data collated is provided to the local environmental records centres nearest to, or relevant for, the site. Route 2 6. Credits are awarded on a scale of 1 to 3, based on the calculation of the change in ecological value occurring as a result of the project. This must be calculated in accordance with the process set out in either GN 35 - BREEAM, CEEQUAL, HQM Ecology Assessment Issues – Route 1 or GN 36 - BREEAM, CEEQUAL, HQM Ecology Assessment	3 to 6	2	1		3	Please ensure ecologist completes Guidance Note 40 (available on request) and to complete the BREEAM Change in Ecological Value Calculator	Suitably Qualified Ecologist/Contractor	NOT Set Up
LE 05 - Long term ecology management and maintenance	Prerequisite - Roles and responsibilities, implementation, statutory obligations	1. The client or contractor has confirmed that compliance is being monitored against all relevant UK, EU and international standards relating to the ecology of the site. 2. Where pursued, LE 04 has been achieved, including the following specific aims of this issue: 2.a Roles and responsibilities have been clearly defined, allocated and implemented to support successful delivery of project outcomes. 2.b Site preparation and construction works have been planned for and implemented at a stage that is sufficiently early in the project to optimise benefits and outputs.	1,2	y			0	It is STRONGLY recommended that a suitably qualified ecologist is appointed to undertake a formal BREEAM 2018 compliant site appraisal and report.	Client/Contractor	NOT Set Up
	Planning, liaison, data, monitoring and review management and maintenance (1 credit)	3. The project team liaise and collaborate with representative stakeholders, taking into consideration data collated and shared, on solutions and measures implemented to: 3.a monitor and review implementation and the effectiveness 3.b develop and review management and maintenance solutions, actions or measures. 4. In support of the above and to help ensure their continued relevance over the period of the project the following should be considered: 4.a Monitoring and reporting of on the ecological outcomes for site implemented at the design and construction stage 4.b Monitoring and reporting of outcomes and successes from the project 4.c Arrangements for the ongoing management of landscape and habitat connected to the project (on and, where relevant, off site) 4.d Maintaining the ecological value of the site and its relationship or connection to its zone of influence 4.e Maintaining the site in line with the any sustainability linked activities, e.g. ecosystems benefits (LE 02). 4.f Remedial or other management actions are carried out which relate to those identified in LE 02, LE 03 and LE 04. 5. As part of the tenant or building owner information supplied, include a section on Ecology and Biodiversity to inform the owner or occupant of local ecological features, value and biodiversity on or near the site.	3 to 5	1			1	Please ensure ecologist completes Guidance Note 40 (available on request)	Suitably Qualified Ecologist/Contractor	NOT Set Up
	Landscape and ecology management plan (or similar) development (1 credit)	6. Landscape and ecology management plan, or similar, is developed in accordance with BS 42020:2013(210) covering as a minimum the first five years after project completion and includes: 6.a Actions and responsibilities, prior to handover, to give to relevant individuals 6.b The ecological value and condition of the site over the development life. 6.c Identification of opportunities for ongoing alignment with activities external to the development project and which supports the aims of BREEAM's Strategic Ecology Framework 6.d Identification and guidance s to trigger appropriate remedial actions to address previously unforeseen impacts 6.e Clearly defined and allocated roles and responsibilities. 7. The landscape and management plan or similar is updated as appropriate to support maintenance of the ecological value of the site.	6,7	1			1	Please ensure ecologist completes Guidance Note 40 (available on request)	Suitably Qualified Ecologist/Contractor	NOT Set Up

Pollution	Pol 01 - Impact of Refrigerants												Pre-requisite												2. All systems (with electric compressors) must comply with the requirements of BS EN 378:2008 (parts 2 and 3) and where refrigeration systems containing ammonia are installed, the Institute of Refrigeration Ammonia Refrigeration Systems Code of Practice												2				y								y				Supporting evidence to include: Please provide written confirmation that all systems with electric compressors comply with the requirements of BS EN 378:2016 within MEP performance specification OR Confirmation that no refrigerant systems in building												M&E Specification				NOT Set Up															
													Impact of refrigerant (1 to 2 credits)												Two credits 3. The direct effect life cycle CO ₂ equivalent emissions (DEL _C) of ≤ 100 CO ₂ -eq/kW. For systems which provide cooling and heating, the worst performing output based on the lower of kW cooling output and kW heating output is used to complete the calculation. OR 4. All refrigerants used have a global warming potential (GWP) ≤ 10. OR One credit 5. Systems using refrigerants have a DEL _C of ≤ 1000 kgCO ₂ -eq/kW cooling and heating capacity												3 to 5				1				1				2																								Supporting evidence to include: Please supply detailed MEP specification for installed refrigerant systems. Please complete Pol 1 calculator tool to complete DELC calculations											
													Leak detection (1 credit)												6. All systems are hermetically sealed or only use environmentally benign refrigerants OR 7. Where the systems are not hermetically sealed: 7.a Systems have: 7.a.i A permanent automated refrigerant leak detection system, that is robust and tested, and capable of continuously monitoring for leaks. OR 7.a.ii An inbuilt automated diagnostic procedure for detecting leakage is enabled. 7.b In the event of a leak, the system must be capable of automatically responding and managing the remaining refrigerant charge to limit loss of refrigerant												6, 7												1																																			
Pol 02 - Local air quality												NOx Emissions (upto 2 credits)												1. All heating and hot water is supplied by non-combustion systems. For example, only powered by electricity. OR alternatively; 2. Emissions from all installed combustion plant that provide space heating and domestic hot water do not exceed the levels set in Table 12.4 and Table 12.5 of the manual. The measurements must be provided by manufacturers, following the labelling requirements of the European directive 2009/125/EC. No credits can be awarded for Pol 02 if any of the combustion appliances are not covered in Table 12.4 below and Table 12.5 (Refer to Table 12.4 and 12.5 of the BREEAM manual) 3. Emissions from all installed combustion plant that provide space heating and domestic hot water do not exceed the levels set in Table 1.21 and Table 1.22												1 to 3				2												2				Supporting evidence to include: Please supply detailed MEP specification for installed systems, or submit draft letter to confirm no fossil fuel systems See section details for Table 12.4 and 12.5 of the BREEAM manual For full assessment methodology - see manual extract.												M&E Specification				NOT Set Up												
												Prerequisite												1. An appropriate consultant is appointed to carry out and demonstrate the development's compliance with all criteria.												1				y								0				Client to appoint appropriate consultant												Client				NOT Set Up																
												Flood risk (1 to 2 credits)												Two credits - Low flood risk 2. A site-specific flood risk assessment (FRA) confirms the development is in a flood zone that is defined as having a low annual probability of flooding. The FRA takes all current and future sources of flooding into consideration One credit - Medium or high flood risk 3. A site-specific FRA confirms the development is in a flood zone that is defined as having a medium or high annual probability of flooding and is not in a functional floodplain. To increase the resilience and resistance of the development to flooding, one of the following must be achieved: 4.a The ground level of the building and access to both the building and the site, are designed (or zoned) so they are at least 600 mm above the design flood level of the site's flood zone 4.b The final design of the building and the wider site reflects the recommendations made by an appropriate consultant in accordance with the hierarchy approach outlined in section 5 of BS 8533:2017 (218)												2 to 4				2								2				Supporting evidence to include: 1. Please provide site specific FRA to confirm flood risk zone and any resilience measures in line with BS 8533:2017 2. Require confirmation of qualifications of suitably qualified consultant												Project Team								NOT Set Up

Pol 03 - Flood and surface water management	Surface water run-off (2 credits)	<p>Pre-requisite</p> <p>5. Surface water run-off design solutions must be bespoke, i.e. they must take account of the specific site requirements and natural or man-made environment of and surrounding the site. The priority levels detailed in the Methodology must be followed, with justification given by the appropriate consultant where water is allowed to leave the site.</p> <p>One credit - Surface Water Run-Off - Rate</p> <p>6. Drainage measures are specified so that the peak rate of run-off from the site to the watercourses (natural or municipal) shows a 30% improvement for the developed site compared with the pre-developed site. This should comply at the 1-year and 100-year return period events.</p> <p>7. Relevant maintenance agreements for the ownership, long term operation and maintenance of all specified Sustainable Drainage Systems (SuDS) are in place.</p> <p>8. Calculations include an allowance for climate change. This should be made in accordance with current best practice planning guidance</p>	5 to 15	1			1	Supporting evidence to include: 1. Please provide site specific Surface water run-off report and drainage strategy in line with Compliance Requirements, to include calculations and a summary of the pre-site and post development run-off volumes. 2. Require confirmation of qualifications of suitably qualified consultant	Project Team	NOT Set Up
	Surface water run-off (2 credits)	<p>One credit - Surface Water Run-Off - Volume</p> <p>9. Flooding of property will not occur in the event of local drainage system failure (caused either by extreme rainfall or a lack of maintenance); AND EITHER</p> <p>10. Drainage design measures are specified so that the post-development run-off volume, over the development lifetime, is no greater than it would have been prior to the assessed site’s development. This must be for the 100-year 6-hour event, including an allowance for climate change</p> <p>11. Any additional predicted volume of run-off for this event is prevented from leaving the site by using infiltration or other SuDS techniques. OR (only where criteria 10 and 11 cannot be achieved):</p> <p>12. Justification from the appropriate consultant indicating why the above criteria cannot be achieved, i.e. where infiltration or other SuDS techniques are not technically viable options.</p> <p>13. Drainage design measures are specified so that the post-development peak rate of run-off is reduced to the limiting discharge. The limiting discharge is defined as the highest flow rate from the following options: 13.a The pre-development one-year peak flow rate 13.b The mean annual flow rate (Qbar) 13.c 2L/s/ha.</p> <p>For the one-year peak flow rate, the one-year return period event criterion applies.</p> <p>14. Relevant maintenance agreements for the ownership, long term operation and maintenance of all specified SuDS are in place.</p> <p>15. For either option, above calculations must include an allowance for climate change; this should be made in accordance with current best practice planning guidance.</p>	5 to 15	1			1	Supporting evidence to include: 1. Please provide site specific Surface water run-off report and drainage strategy in line with Compliance Requirements, to include calculations and a summary of the pre-site and post development run-off volumes. 2. Require confirmation of qualifications of suitably qualified consultant		NOT Set Up
	Minimising water course pollution (1 credit)	<p>16. There is no discharge from the developed site for rainfall up to 5 mm (confirmed by the appropriate consultant).</p> <p>17. Areas with a low risk source of watercourse pollution, an appropriate level of pollution prevention treatment is provided, using appropriate SuDS techniques.</p> <p>18. Areas with a high risk of contamination or spillage of substances, such as petrol and oil, have separators (or an equivalent system) are installed in surface water drainage systems.</p> <p>19. Chemical or liquid gas storage areas have a means of containment fitted to the site drainage system (i.e. shutoff valves). This is to prevent the escape of chemicals to natural watercourses in the event of a spillage or bunding failure.</p> <p>20. All water pollution prevention systems have been designed and installed in accordance with the recommendations of documents such as the SuDS manual(219) and other relevant industry best practice. They must be bespoke solutions taking account of the specific site requirements and natural or man-made environment of and surrounding the site.</p> <p>21. A comprehensive and up to date drainage plan of the site will be made available for the building or site occupiers.</p> <p>22. Relevant maintenance agreements for the ownership, long term operation and maintenance of all specified SuDS must be in place.</p> <p>23. All external storage and delivery areas are designed and detailed in accordance with the current best practice planning guidance.</p>	16 to 23		1		1	Please provide details of SuDS technique considered Supporting evidence to include: 1. SUDs report as part of FRA and Run-off report	Appropriate Consultant/Hydrologist	NOT Set Up
Pol 04 - Reduction of Night Time Light Pollution	Reduction in Night Time Light Pollution (1 credit)	<p>1. External lighting pollution has been eliminated through effective design that removes the need for external lighting. This does not adversely affect the safety and security of the site and its users.</p> <p>OR alternatively, where the building does have external lighting, one credit can be awarded as follows:</p> <p>2. The external lighting strategy has been designed in compliance with Table 2 (and its accompanying notes) of the Institution of Lighting Professionals (ILP) Guidance notes for the reduction of obtrusive light, 2011(225).</p> <p>3. All external lighting (except for safety and security lighting) can be automatically switched off between 23:00 and 07:00.</p> <p>4. If safety or security lighting is provided and will be used between 23:00 and 07:00, this part of the lighting system complies with the lower levels of lighting recommended during these hours in Table 2 of the ILPguidance notes.</p> <p>5 Illuminated advertisements are designed in compliance with ILP PLG05 The Brightness of Illuminated Advertisements.(226).</p>	1 to 5	1			1	Supporting evidence to include: Please provide written confirmation that all external lighting designed in line with the appropriate ILE guidance - See Draft Letter	M&E Specification	NOT Set Up

Pol 05 - Reduction of Noise Pollution?	Reduction in Noise Pollution (1 credit)	1. There are no noise-sensitive areas within the assessed building or within 800 m radius of the assessed site. OR 2. Where there are noise-sensitive areas within the assessed building or noise-sensitive areas within 800 m radius of the assessed site, a noise impact assessment compliant with BS 4142:2014(227) is commissioned. Noise levels must be measured or determined for: 2.a Existing background noise levels: 2.a.i at the nearest or most exposed noise-sensitive development to the proposed assessed site 2.a.ii including existing plant on a building, where the assessed development is an extension to the building 2.b Noise rating level from the assessed building. 3. The noise impact assessment must be carried out by a suitably qualified acoustic consultant. 4. The noise level from the assessed building, as measured in the locality of the nearest or most exposed noise sensitive development, must be at least 5dB lower than the background noise throughout the day and night. 5. If the noise sources from the assessed building are greater than the levels described in criterion 4, measures have been installed to attenuate the noise at its source to a level where it will comply with the criterion.	1 to 4?	1			1	Supporting evidence to include: 1. Please provide a noise impact assessment compliant with BS 4142:2014; to be undertaken by a suitably qualified consultant. 2. Please provide evidence of the acousticians qualifications (see Section Detail for definition)	Contractor	NOT Set Up
