

AREA (A) $\frac{B \times H \times H}{6}$

$\therefore 7.900 \times 2.900 \times 4.085 \div 6 = 15.595 \text{ m}^3$

AREA (B) $\frac{B \times H}{2} \times L$

$\therefore 3.500 \times 2.600 \div 2 \times 7.450 = 33.898 \text{ m}^3$

Notes
All drawings to be printed at 100% scale
The drawing is © of All Aspects Ltd
All boundaries marked on these plans are unconfirmed and shall be assumed
Do not scale from this drawing, use only figured dimensions
Any discrepancies should be notified to All Aspects Ltd for confirmation
All materials used should match existing materials as closely as possible
This drawing should be read in conjunction with the relevant specification and latest Structural Design

Proposed Front Elevation

Proposed Side Elevation Viewed from No. 38

Proposed Rear Elevation

VOLUME =

+ (A) $\cdot 15.595$
+ (B) $\cdot 33.898$

= TOTAL 49.493 m³

FOR PLANNING

Proposed Side Elevation Viewed from No. 34
