

Technical drawing of a wall section. The wall consists of several layers: an outer brick layer, a thick insulation layer (hatched), a vapor barrier (dashed line), and an inner brick layer. A window is shown in the center, with a frame and a sill. Above the window, there is a small rectangular structure with four circles inside, possibly representing a light fixture or a ventilation unit. The drawing is a cross-section, showing the internal structure of the wall and the window.
