

Diagram illustrating the Edge of RPA (Right of Public Access) for tree protection. The diagram shows a tree on the left, a 'Protected area' defined by a 'Protective fencing' structure, and a 'Ground undisturbed and protected by geotextile fabric, and side buffing scaffold boards on a compressible layer'. The diagram also shows a cross-section of the ground with roots and a building foundation on the right.

- The slope of ground should be taken into account so no material runs towards tree
- Notice boards, cables or other services should not be attached to tree
- Care should be taken when planning site to ensure wide or tall loads do not come into contact with retained tree

- 2m high Heras fencing to be provided around tree and must be in place until all construction and hard surfacing is complete
- No work to take place within fenced off area
- Materials must be stored on existing hard surface and provision for spillage must be made
- Cement/concrete mixing must take place over a suitable hard surface away from treezone

Purpose - Householder planning application only
