CONTENTS

Introduction

Devise Engineers were appointed to provide a Flood Risk Assessment in support of a planning application for the proposed developments at Ruislip Lido, Hillingdon. The site in which this report pertains to are highlighted in Figure 1. The sites are located at Woody Bay and Willow Lawn respectively.

The proposed redevelopment comprises the demolition and replacement of each of the single-storey toilet and changing facilities at Woody Bay and Willow Lawn, as well as the installation of PV panels.

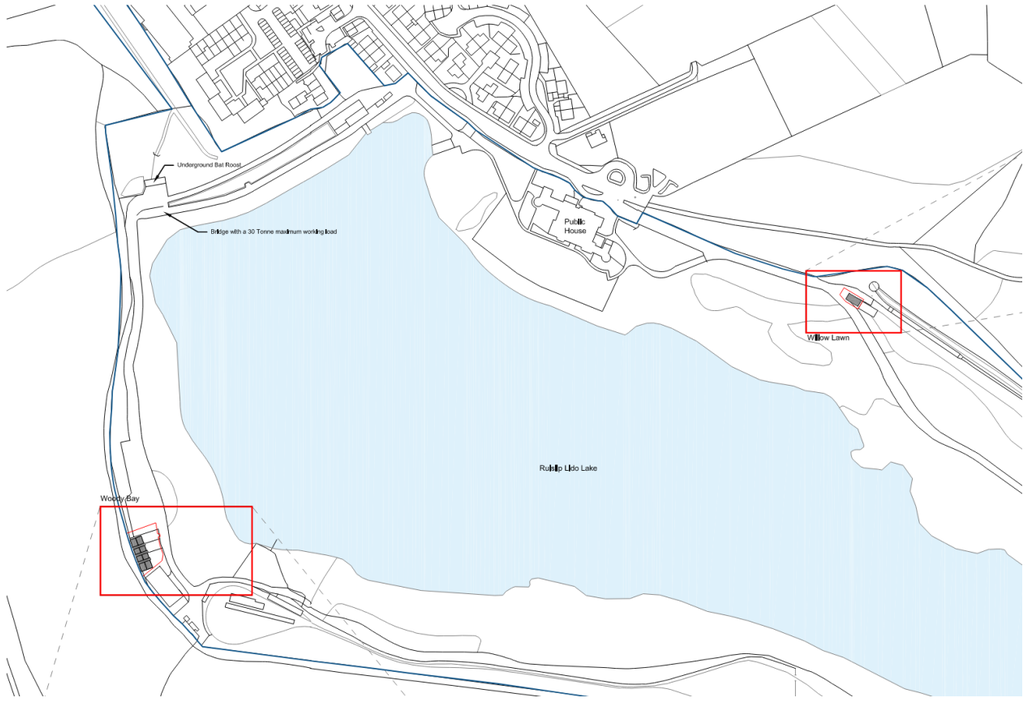
The proposed toilets and changing facilities for the site at Willow Lawn will include 2x male WCs and 2x urinals, 4x female WCs an accessible WC and plant space. The proposed building measures approximately 44m^2, an uplift of approximately 10m^2 over the existing toilet building.

The proposed toilets and changing facilities for the site at Woody Bay will include 5x male WCs and 5x urinals, 20x female WCs, 4x accessible WCs, 3x family changing rooms and plant space. The proposed building measures approximately 188m^2, an uplift of approximately 68m^2 over the existing toilet building.

The proposed redevelopment at Willow Lawn will mimic the existing impermeable area of the site and will result in no increase in surface water runoff rates, whilst the development at Woody Bay will increase the existing impermeable area of the site and will result in an increase in surface water runoff rates. The developments are classed as ‘Less Vulnerable’ Development under the National Planning Policy Framework (NPPF) Table 2: Flood Risk Vulnerability Classification. As such it is deemed to be an Appropriate development for Flood Zones 1 and 2 under the NPPF Table 3: Flood Risk Vulnerability and Flood Zone ‘Compatibility’.

This report considers the flood risk to the proposed development and the impact that the development will have in relation to flooding of adjacent areas and watercourses.

This report takes into account the requirements of NPPF, local Flooding Reports and is based on information received from the Environment Agency (EA) web site.



> FIGURE 1: SITE LOCATION PLAN

Flood Risk Policy

This Flood Risk Assessment has been written in accordance with GOV.uk guidelines and the NPPF. Flood Risk will be assessed for the following flood risks:

- Rivers and the Sea
- Surface Water Runoff
- Sewer Flooding
- Groundwater
- Other Sources

The following documents have been reviewed in preparation of this Flood Risk Assessment:

- West London Strategic Flood Risk Assessment (SFRA)
- Hillingdon Local Plan
- Hillingdon Local Flood Risk Management Strategy
- Hillingdon Surface Water Management Plan
- GOV.uk Flood Risk Maps

Existing Site Conditions

The development sites are located at Ruislip Lido, Reservoir Road, Hillingdon, London. The site eastings and northings are 508899 E; 188909 N and 508719 E; 189377 N respectively. Existing site plans can be found in **Appendix 1**.

The existing sites comprise existing single-storey toilet and changing facilities with associated hard and soft landscaping. The site at Woody Bay is accessed from an access road leading from Reservoir Road and over the bridged spillway to the south of Ruislip Lido. The Willow Lawn site is accessed directly from Reservoir Road to the north of Ruislip Lido.

A topographic survey of the existing sites was undertaken by Midland Survey Ltd in January 2020. The survey indicates that the existing toilet block located at Willow Lawn has a FFL of 51.08mAOD with surrounding levels set slightly lower, falling to the south and east.

The existing Willow Lawn toilet block is bound to the north by Ruislip Lido Railway. To the east of the site is Turntable Tea Room with Willow Lawn Carpark beyond. The access road from which this site is accessed is located on the southern boundary of the site, with Ruislip Lido beyond. Extensive areas of soft landscaping and Reservoir Road are located beyond the western boundary of this site.

The existing toilet block at Woody Bay has a FFL of 52.52mAOD. The building is set slightly higher than the immediate areas adjacent to the buildings. The toilet block is accessed via a set of steps which provide access from the lower levels to the north of the building which are generally at a level of 51.85mAOD and fall to the north towards the Lido.

Ruislip Lido Beach is located to the north of the Woody Bay site. San Remo Lakeside Café is located to the east of the existing building, with extensive woodlands beyond to the east and south of this site. To the west of this site is a children's play area and associated hard and soft landscaping.

The nearest significant watercourse to the site is Mad Bes Brook, approximately 900m west of the dam to the Lido and discharges to Cannon Brook within Whiteheath, approximately 1,000m to the southwest. The Lido discharges via Cannon Brook which then joins the River Pinn approximately 1,600m to the southwest of the Lido. At its closest point, the River Pinn runs westerly, approximately 1,100m south of the Lido.

Sewer Asset mapping has been obtained from Thames Water. The sewer records show the Willow Lawn site to be served by a 525mm foul water sewer located to the north of the site and runs in a westerly direction. The sewer is approximately 4.00m deep to the invert level, with an invert level of 48.40m at Manhole 6401.

No public sewers are present within the vicinity of the Woody Bay site.

British Geological Survey maps indicate the site to be underlain by the Thames Group Formation comprising clay, silt sand and gravel, with no superficial deposits. On this basis it is unlikely that drainage by infiltration techniques would not be feasible. A review of historical borehole logs within the vicinity of the site shows the ground conditions to comprise of made ground and clay with chalk at depth.

The Environment Agency online groundwater mapping uses the same BGS mapping base information and classifies the site as a Secondary A Aquifer, which is described as “These are permeable layers of rock that can support local water supplies and may form an important source of base flow to rivers.”

Proposed Site

The proposed redevelopment comprises the demolition and replacement of each of the single-storey toilet and changing facilities at Woody Bay and Willow Lawn, as well as the installation of PV panels.

The proposed toilets and changing facilities for the site at Willow Lawn will include 2x male WCs and 2x urinals, 4x female WCs an accessible WC and plant space. The proposed building measures approximately 44m^2, an uplift of approximately 10m^2 over the existing toilet building.

The proposed toilets and changing facilities for the site at Woody Bay will include 5x male WCs and 5x urinals, 20x female WCs, 4x accessible WCs, 3x family changing rooms and plant space. The proposed building measures approximately 188m^2, an uplift of approximately 68m^2 over the existing toilet building.

The proposed redevelopment at Willow Lawn will mimic the existing impermeable area of the site and will result in no increase in surface water runoff rates, whilst the development at Woody Bay will increase the existing impermeable area of the site and will result in an increase in surface water runoff rates.

A copy of the proposed site layout is located in **Appendix 2**.

Flood Risk

The Floodplain mapping provided by the Environment Agency (EA) indicates that the area of the Willow Lawn development is located in Flood Zone 2 and therefore does not have to pass the Sequential and Exception Tests.

The development site at Woody Bay is located within Flood Zone 1 and is therefore at a very low risk of flooding.

Flood Zone 1 is defined as comprising 'land assessed as having less than a between a 1 in 1000 (0.1%) annual probability of river or sea flooding'.

Flood Zone 2 is defined as comprising 'land assessed as having between a 1 in 1000 (0.1%) and 1 in 100 (1.0%) annual probability of river or sea flooding'.

The Flood Risk Vulnerability for the developments is classified as 'Less Vulnerable' under Table 2 of NPPF Technical Guidance.

Flood Zones	Flood Risk Vulnerability Classification				
	Essential infrastructure	Highly vulnerable	More vulnerable	Less vulnerable	Water compatible
Zone 1	✓	✓	✓	✓	✓
Zone 2	✓	Exception Test required	✓	✓	✓
Zone 3a †	Exception Test required †	✗	Exception Test required	✓	✓
Zone 3b *	Exception Test required *	✗	✗	✗	✓*

> FIGURE 2: TABLE 3: FLOOD RISK VULNERABILITY CLASSIFICATION

On this basis the sites at Willow Lawn and Woody Bay are considered to have a medium and very low risk of flooding respectively.

Flood risks to the sites are considered as follows:

Flood from Rivers and the Sea

As noted above, Flood zone information provided by the Environment Agency shows the Willow Lawn site to be located in Flood Zone 2 and is therefore at medium risk of flooding, whilst the Woody Bay site is located in Flood Zone 1 and is therefore at very low risk of flooding.

> FIGURE 3: FLUVIAL FLOOD MAP FOR WILLOW LAWN

> FIGURE 4: FLUVIAL FLOOD MAP FOR WOODY BAY

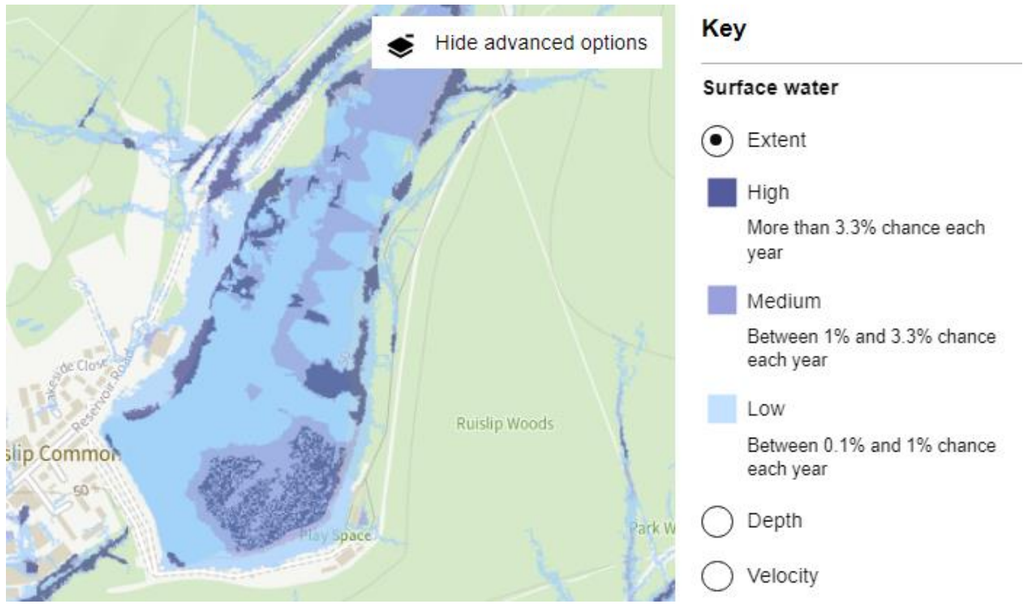
Flooding from Surface Water Runoff

Surface water flooding occurs when intense rainfall is unable to soak into the ground or enter drainage systems, because of blockages, or breakages in water pipes or where the drainage capacity has been exceeded.

Localised flooding of roads can also take place when gullies are unable to discharge into already full combined sewers, sewers which receive both foul water and water from roofs, hard standing and highways. It is often difficult to identify the source of the problem as it can be exacerbated by blocked gullies from debris.

The Environment Agency Flood Risk from Surface Water flood map indicates the Willow Lawn site and the area immediately adjacent to the site sits within an area with a very low risk of flooding from surface water, and therefore has less than 0.1% annual probability of flooding.

The levels within the access road to the south of the site are approximately 500mm lower than the development site, and therefore any surface water runoff will naturally be conveyed, following the route of the existing topography away from the site.



> FIGURE 5: SURFACE WATER FLOOD MAP FOR WILLOW LAWN

Similarly, the Environment Agency Flood Risk from Surface Water flood map indicates the Woody Bay site and surrounding area sits within an area with a very low risk of flooding from surface water, and therefore has less than 0.1% annual probability of flooding.

It is noted within the London borough of Hillingdon Surface Water Management Plan that the development site is not located within a Critical Drainage Area.

Levels on site will be designed to convey surface water runoff away from building thresholds and will increase the resilience to flooding from surface water runoff.

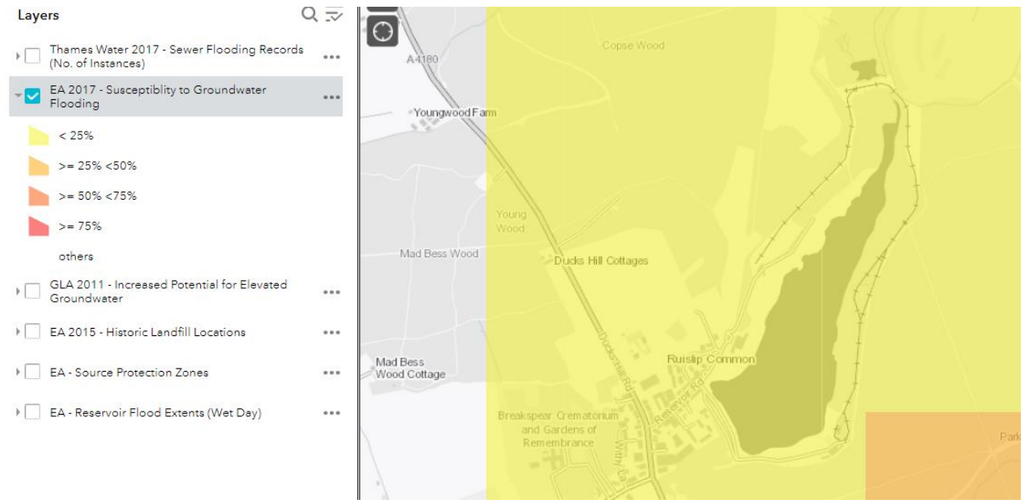
After a review of the above information, the flood risk from surface water runoff for each of the respective sites is deemed to be very low.

Groundwater Flooding

The Flood and Water Management Act (FWMA) 2010 defines groundwater as ‘all water which is below the surface of the ground in direct contact with ground or subsoil’. This water occupies the cracks and pores of permeable rocks, soils and gravels.

Groundwater springs from the ground at the point where the water table meets the surface. This type of flooding is likely to occur in low-lying areas which are underlain by permeable rock (aquifers).

On review of the Environment Agency Susceptible to Groundwater Flooding plan within the West London SFRA, the site is located within an area with less than 25% susceptibility to flooding from groundwater.



> FIGURE 6: EA SUSCEPTIBILITY TO GROUNDWATER FLOODING PLAN

The risk of flooding from groundwater is therefore considered to be low.

Flooding From Sewers

Sewer Asset mapping has been obtained from Thames Water. The sewer records show the Willow Lawn site to be served by a 525mm foul water sewer located to the north of the site and runs in a westerly direction. The sewer is approximately 4.00m deep to the invert level, with an invert level of 48.40m at Manhole 6401.

No public sewers are present within the vicinity of the Woody Bay site.

Thames Water Sewer Records can be found in **Appendix 3**.

Thames Water have also been consulted to confirm if there have been any instances of sewer flooding and confirms that there have been no instances of flooding as a result of sewer surcharge.

Thames Water are responsible for the maintenance of their infrastructure assets and therefore the risk of flooding due to blockages is expected to be low.

Flooding From Private Drainage

The existing below ground drainage arrangement for each site is picked up on the topographical surveys. The existing toilet block located at Willow Lawn appears to discharge foul water to a packaged pumping station, however, there is no formal surface water drainage shown for the existing building. The existing below ground drainage network is situated at lower levels than the building, and should any flooding occur from the private drainage network, it is anticipated that the flood water will arise through the manhole covers in the first instance before flooding the building. On this basis, the risk of flooding from private drainage is deemed to be low.

The existing building at Woody Bay is served via a 100mm foul drain which discharges to a manhole approximately 50m west of the site before upsizing to 150mm pipework.

The existing 100mm drain is laid to falls of approximately 1:166 and would not have sufficient capacity to serve the proposed toilet block and changing facilities. It is therefore recommended that this section of drain is upgraded to a 150mm drain as part of the development works to mitigate against flooding from the private drain.

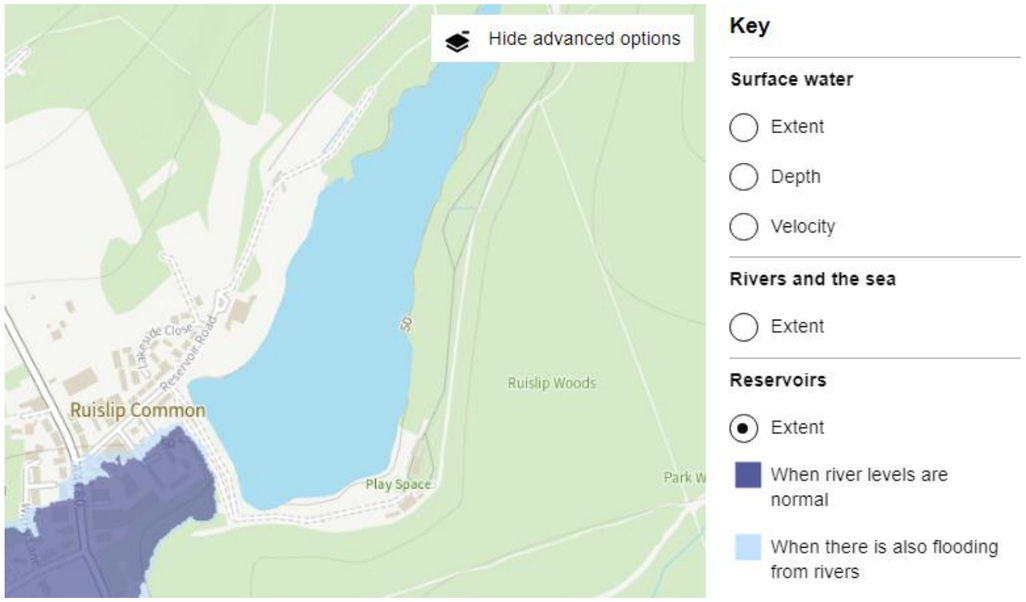
As above, the existing below ground drainage network is situated at lower levels than the building, and should any flooding occur from the private drainage network, it is anticipated that the flood water will arise through the manhole covers in the first instance before flooding the building. On this basis, the risk of flooding from private drainage is deemed to be low.

Flooding from Other Sources

A review of the Environment Agency flood risk from reservoirs map shows that the site is located outside of the reservoir Flood Risk Zone and is therefore at a very low risk of flooding from reservoir breaches.

With the development sites being located on the boundary of Ruislip Lido, any flooding from the reservoir would occur in the event of the failure of the dam to the west of the Lido which would convey any water away from the development sites.

In the event that the water level within the reservoir were to rise and pose a flood risk to the surrounding areas, the council responsible for the management of the reservoir will increase the discharge rate from the reservoir ensuring that flooding does not occur upstream of the dam.



> FIGURE 8: BGS MAP SHOWING LONDON CLAY FORMATION

Our assessment of the flood risks indicates that the site is in a very low flood risk area.

Conclusions

The development sites at Willow Lawn and Woody Bay lie within Flood Risk Zones 2 and 1 as indicated on the Environment Agency flood map. On this basis the sites are considered to be at medium and low risk of flooding respectively.

A review of all other potential sources of flooding shows the development site to be at low risk of flooding.

DISCLAIMER :-

Electromagnetic techniques have been used in the location of underground services. The results are not infallible and trial excavations should be carried out to confirm service identification, positions and particularly depths, where these are critical. The completeness of the underground services information cannot be guaranteed.

This method of survey does not differentiate between live and dead services, and as such all services should be treated as live. This drawing may not include the location of all public services that may cross the site, therefore the relevant service drawings should be obtained from the appropriate utility company and used in conjunction with this drawing.

Private service pipes and cables in highways are not shown, but there presence should be anticipated.

Additional below ground structures or obstructions not shown on this drawing may be present. Reference should be made to historical plans and as-built drawings. Excavations in the vicinity of services should be carried out with due diligence ref: HSG47 document avoiding dangers from underground services

Please note that factors such as ground conditions, proximity of other utilities, material and method of construction have an influence on the quality of the data collected on site.

TSA Standards – "A utility mapping survey can be considered a 100% accurate depiction of the sub-surface environment, and the use of these drawings does not remove the requirement for the use of safe digging techniques at all times, in line with requirements of HSG47 and current CDM regulations".

UTILITY NOTES

NO UTILITY RECORDS PROVIDED AT THE TIME OF THE SURVEY.

THE SMALL BRICK BUILDING IN THE WEST OF THE SURVEY AREA IS A PUMPING STATION FOR THE RESVIOR, UNABLE TO TRACE THE PIPES DUE TO THEM BEING APROX 7 METERS IN DOWN DEPTH. MAKING FINDING THE SERVICE WITH GROUND PENETRATING OR CAT AND GENNY UNUSABLE

NO MAINS GAS FEED ON SITE, THERE IS A LPG TANK BUT NOT IN THE AREA OF WORKS.

THE UNIDENTIFIED SERVICE RUNNING THE WHOLE OF THE SITE IS POSSIABLY THE WATER BUT CAN CAN NOT BE CONFIRMED.

THE MANHOLE IN SOUTH WEST CORNER HAS NO SERVICES THIS IS USED AS AN ACCESS FOR THE UNDER PASS.

FOWL DRAINS AND PUMP AT WILLOW LAWN TRAIN STATION ALL FLOODED/FULL. UNABLE TO RECORED –DEPTHS OR CONNECTING PIPES.

ALL WATER PIPES ACROSS SITE ARE P.E, UNABEL TO INDUCE SIGNAL, NO TRACE POSSIBLE.

WILLOW LAWN CAR PARK FULL AT TIME OF SURVEY.

POOR GPR RESULTS ACROSS SITE DUE TO SURFACE WATER ACROSS SITE.

DISCLAIMER :-

Electromagnetic techniques have been used in the location of underground services. The results are not infallible and trial excavations should be carried out to confirm service identification, positions and particularly depths, where these are critical. The completeness of the underground services information cannot be guaranteed.

This method of survey does not differentiate between live and dead services, and as such all services should be treated as live. This drawing may not include the location of all public services that may cross the site, therefore the relevant service drawings should be obtained from the appropriate utility company and used in conjunction with this drawing.

Private service pipes and cables in highways are not shown, but there presence should be anticipated.

Additional below ground structures or obstructions not shown on this drawing may be present. Reference should be made to historical plans and as–built drawings. Excavations in the vicinity of services should be carried out with due diligence ref: HSG47 document avoiding dangers from underground services

Please note that factors such as ground conditions, proximity of other utilities, material and method of construction have an influence on the quality of the data collected on site.

TSA Standards – "A utility mapping survey can be considered a 100% accurate depiction of the sub–surface environment, and the use of these drawings does not remove the requirement for the use of safe digging techniques at all times, in line with requirements of HSG47 and current CDM regulations".

UTILITY NOTES

NO UTILITY RECORDS PROVIDED AT THE TIME OF THE SURVEY.

THE SMALL BRICK BUILDING IN THE WEST OF THE SURVEY AREA IS A PUMPING STATION FOR THE RESIVOIR, UNABLE TO TRACE THE PIPES DUE TO THEM BEING APROX 7 METERS IN DOWN DEPTH. MAKING FINDING THE SERVICE WITH GROUND PENETRATING OR CAT AND GENNY UNUSIABLE

NO MAINS GAS FEED ON SITE, THERE IS A LPG TANK BUT NOT IN THE AREA OF WORKS.

THE UNIDENTIFIED SERVICE RUNNING THE WHOLE OF THE SITE IS POSSIABLY THE WATER BUT CAN CAN NOT BE CONFIRMED.

THE MANHOLE IN SOUTH WEST CORNER HAS NO SERVICES THIS IS USED AS AN ACCESS FOR THE UNDER PASS.

FOWL DRAINS AND PUMP AT WILLOW LAWN TRAIN STATION ALL FLOODED/FULL. UNABLE TO RECORED –DEPTHS OR CONNECTING PIPES.

ALL WATER PIPES ACROSS SITE ARE P.E, UNABEL TO INDUCE SIGNAL, NO TRACE POSSIBLE.

WILLOW LAWN CAR PARK FULL AT TIME OF SURVEY.

POOR GPR RESULTS ACROSS SITE DUE TO SURFACE WATER ACROSS SITE.

DISCLAIMER :-

Electromagnetic techniques have been used in the location of underground services. The results are not infallible and trial excavations should be carried out to confirm service identification, positions and particularly depths, where these are critical. The completeness of the underground services information cannot be guaranteed.

This method of survey does not differentiate between live and dead services, and as such all services should be treated as live. This drawing may not include the location of all public services that may cross the site, therefore the relevant service drawings should be obtained from the appropriate utility company and used in conjunction with this drawing.

Private service pipes and cables in highways are not shown, but there presence should be anticipated.

Additional below ground structures or obstructions not shown on this drawing may be present. Reference should be made to historical plans and as-built drawings. Excavations in the vicinity of services should be carried out with due diligence ref: HSG47 document avoiding dangers from underground services

Please note that factors such as ground conditions, proximity of other utilities, material and method of construction have an influence on the quality of the data collected on site.

TSA Standards – "A utility mapping survey can be considered a 100% accurate depiction of the sub-surface environment, and the use of these drawings does not remove the requirement for the use of safe digging techniques at all times, in line with requirements of HSG47 and current CDM regulations".

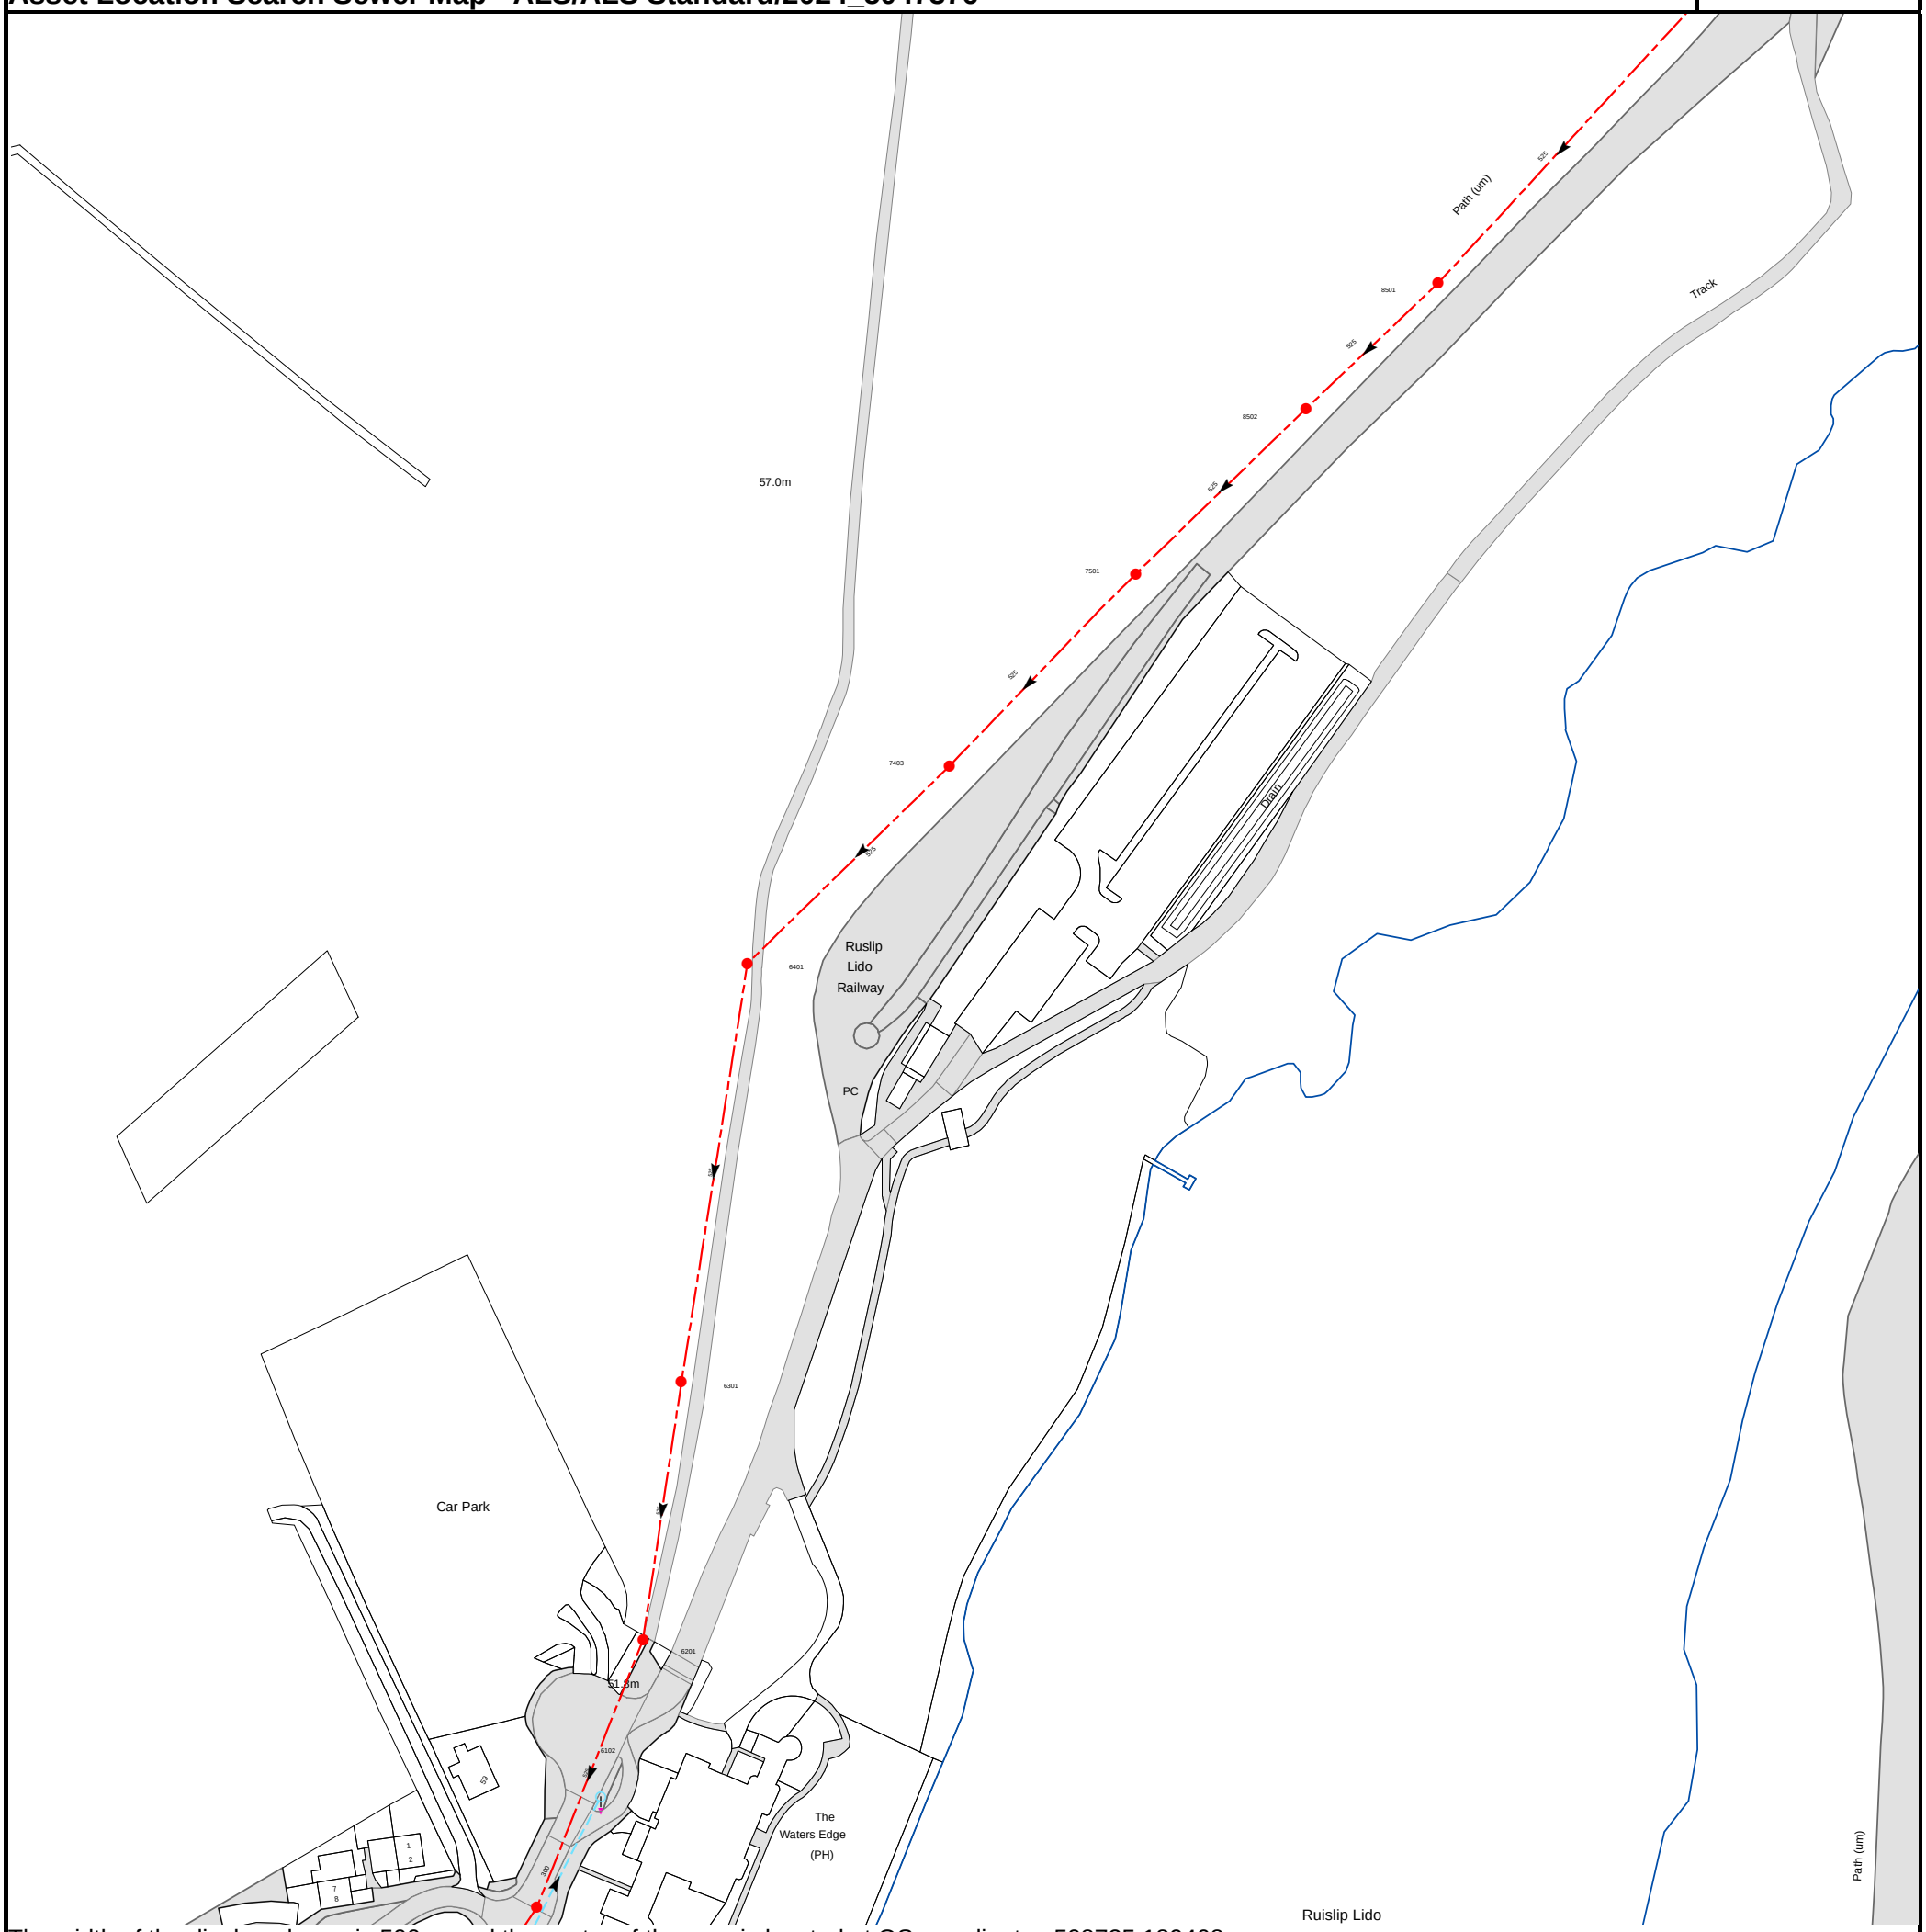
APPENDIX 3

Asset Location Search Sewer Map - ALS/ALS Standard/2024_5047376



The width of the displayed area is 500 m and the centre of the map is located at OS coordinates 508735,189408

The position of the apparatus shown on this plan is given without obligation and warranty, and the accuracy cannot be guaranteed. Service pipes are not shown but their presence should be anticipated. No liability of any kind whatsoever is accepted by Thames Water for any error or omission. The actual position of mains and services must be verified and established on site before any works are undertaken.

Based on the Ordnance Survey Map (2020) with the Sanction of the controller of H.M. Stationery Office, License no. 100019345 Crown Copyright Reserved.

NB. Levels quoted in metres Ordnance Newlyn Datum. The value -9999.00 indicates that no survey information is available

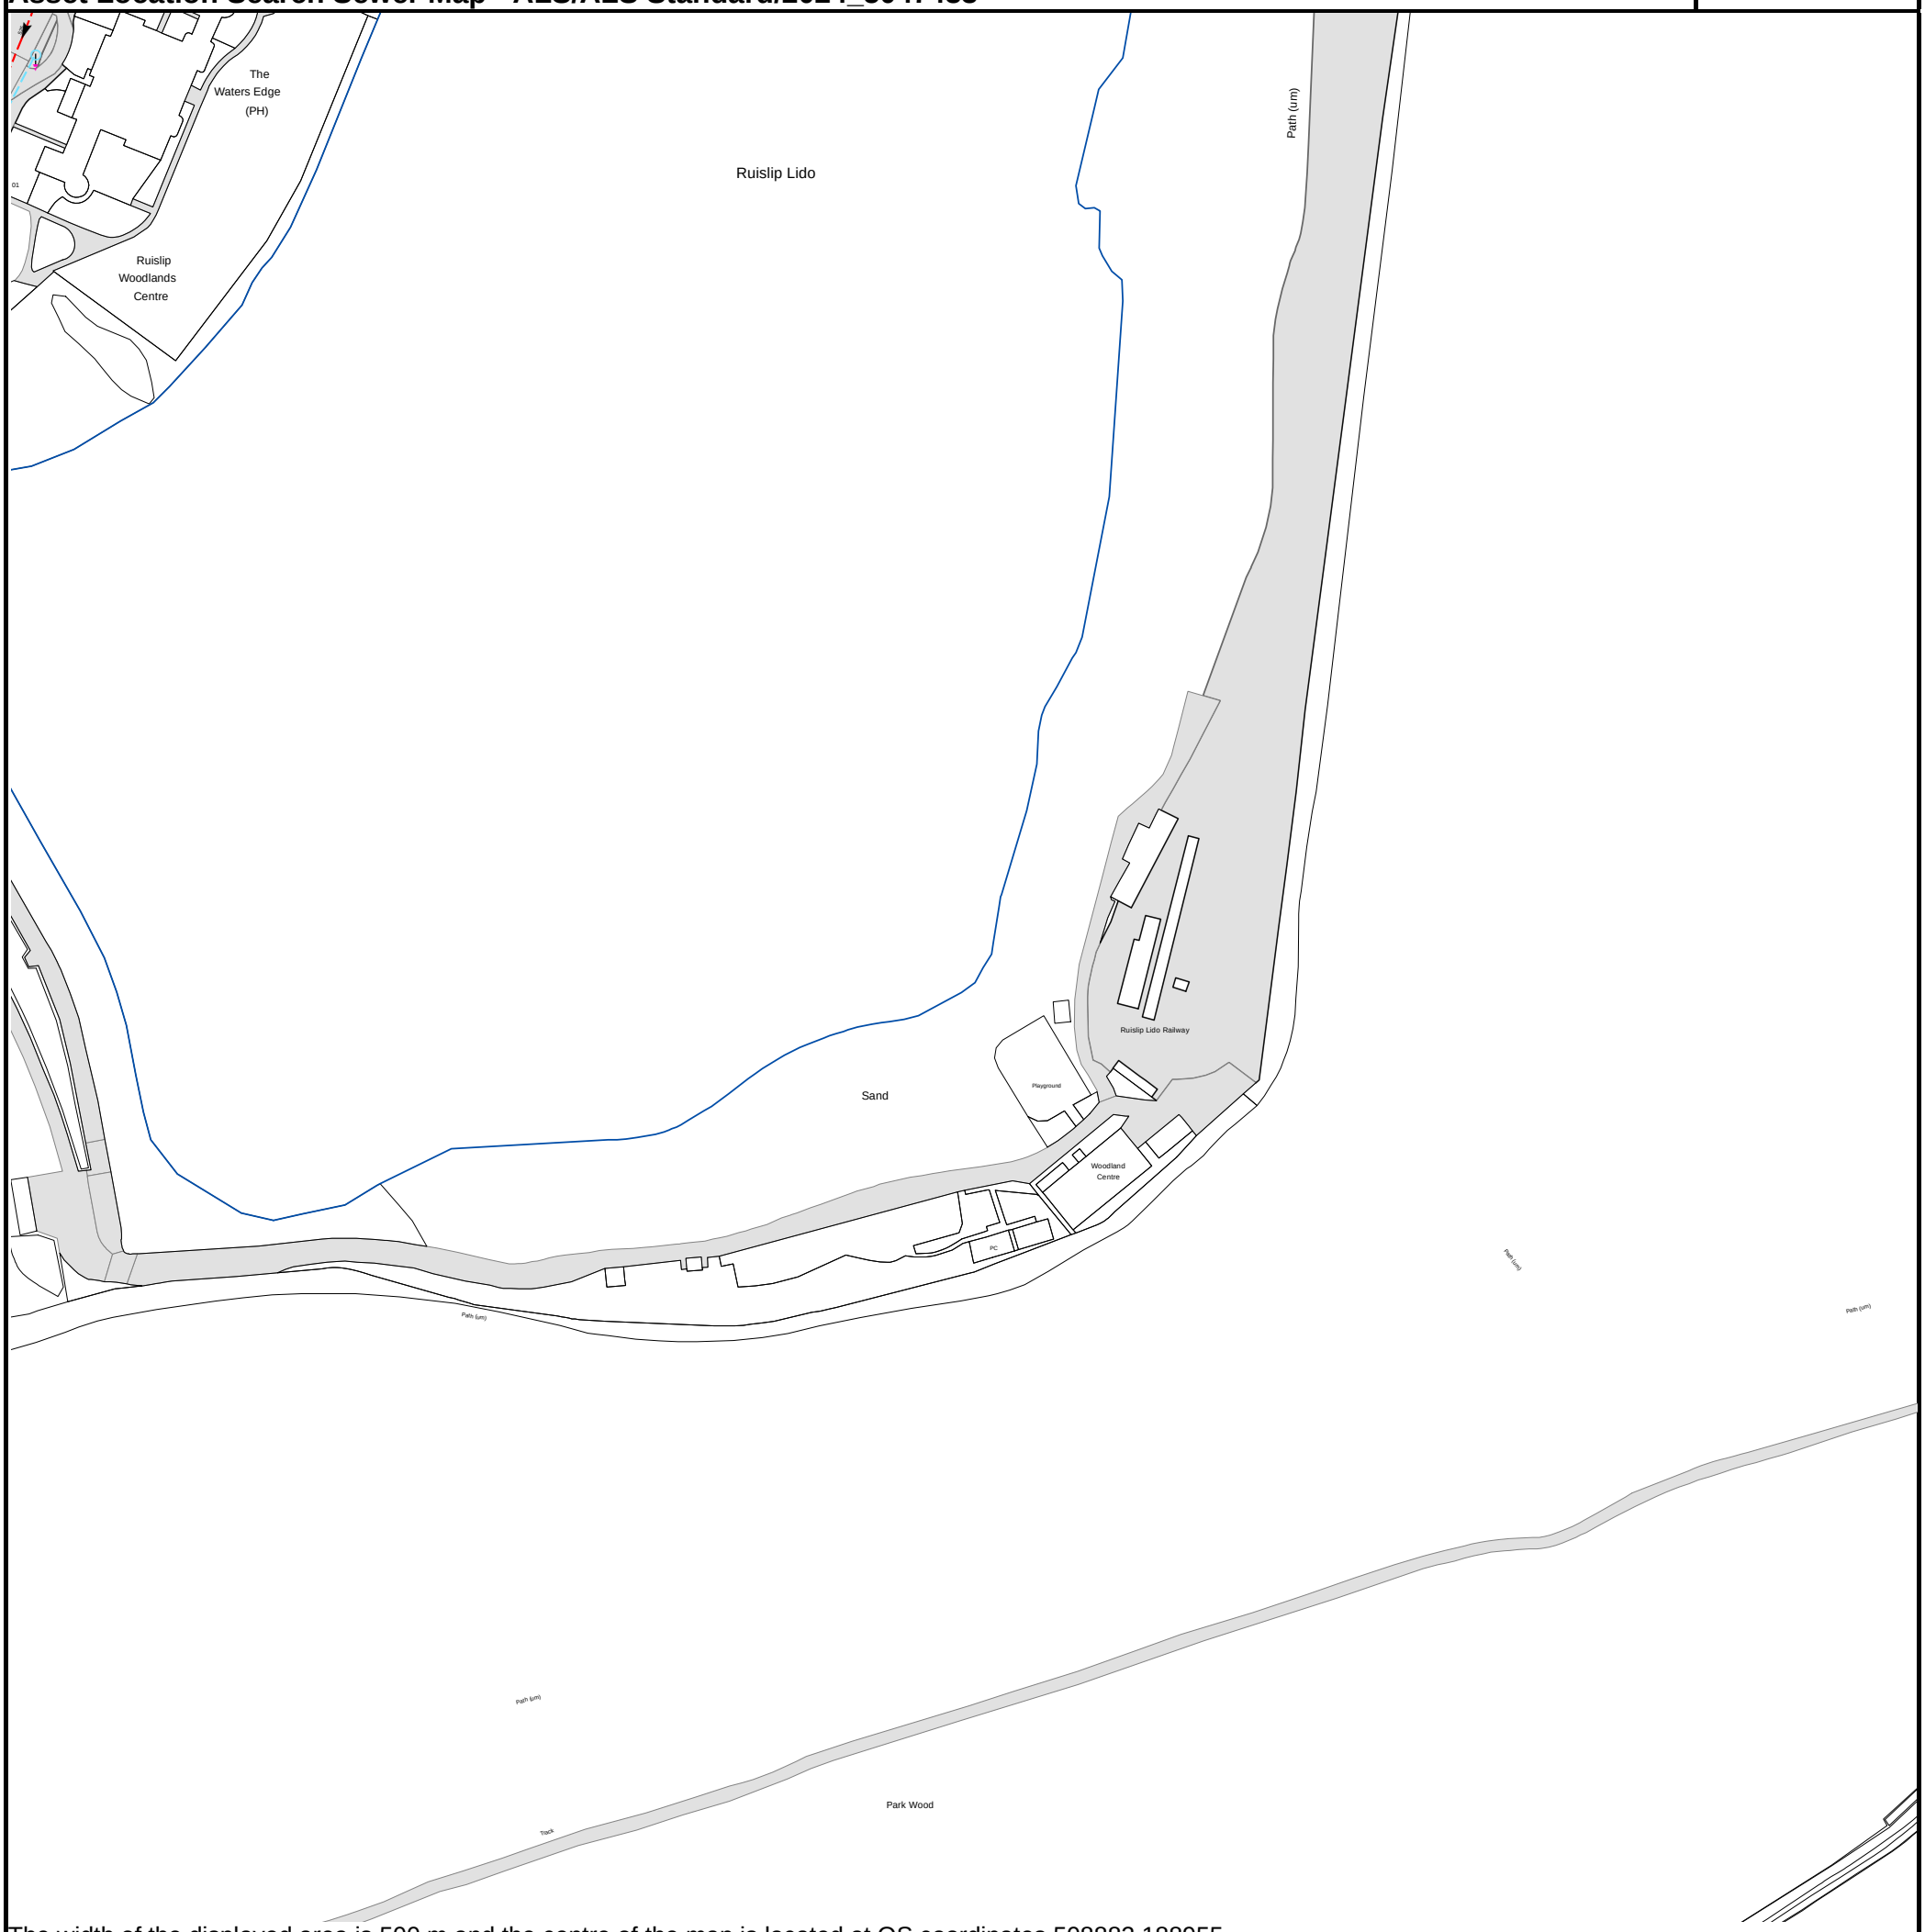
Asset Location Search Sewer Map - ALS/ALS Standard/2024_5047433



The width of the displayed area is 500 m and the centre of the map is located at OS coordinates 508882,188955

The position of the apparatus shown on this plan is given without obligation and warranty, and the accuracy cannot be guaranteed. Service pipes are not shown but their presence should be anticipated. No liability of any kind whatsoever is accepted by Thames Water for any error or omission. The actual position of mains and services must be verified and established on site before any works are undertaken.

Based on the Ordnance Survey Map (2020) with the Sanction of the controller of H.M. Stationery Office, License no. 100019345 Crown Copyright Reserved.

Based on the Ordnance Survey Map with the sanction of the Controller of H.M Stationary Office License Number 10019345

Asset Location Search - Sewer Key

Public Sewer Types (Operated and maintained by Thames Water)

Foul Sewer: A sewer designed to convey waste water from domestic and industrial sources to a treatment works.

Surface Water Sewer: A sewer designed to convey surface water (e.g. rain water from roofs, yards and car parks) to rivers or watercourses.

Combined Sewer: A sewer designed to convey both waste water and surface water from domestic and industrial sources to a treatment works.

- Storm Sewer
- Sludge Sewer
- Foul Trunk Sewer
- Surface Trunk Sewer
- Combined Trunk Sewer
- Foul Rising Main
- Surface Water Rising Main
- Combined Rising Main
- Vacuum
- Thames Water Proposed
- Vent Pipe
- Gallery

Other Sewer Types (Not operated and maintained by Thames Water)

- Sewer
- Culverted Watercourse
- Proposed
- Decommissioned Sewer
- Content of this drainage network is currently unknown
- Ownership of this drainage network is currently unknown

Sewer Fittings

A feature in a sewer that does not affect the flow in the pipe. Example: a vent is a fitting as the function of a vent is to release excess gas.

- Air Valve
- Meter
- Dam Chase
- Vent
- Fitting

Operational Controls

A feature in a sewer that changes or diverts the flow in the sewer. Example: A hydrobrake limits the flow passing downstream.

- Ancillary
- Drop Pipe
- Control Valve
- Weir

End Items

End symbols appear at the start or end of a sewer pipe. Examples: an Undefined End at the start of a sewer indicates that Thames Water has no knowledge of the position of the sewer upstream of that symbol. Outfall on a surface water sewer indicates that the pipe discharges into a stream or river.

- Inlet
- Outfall
- Undefined End

Other Symbols

Symbols used on maps which do not fall under other general categories.

- Change of Characteristic Indicator
- Public / Private Pumping Station
- Invert Level
- Summit

Areas

Lines denoting areas of underground surveys, etc.

- Agreement
- Chamber
- Operational Site

Ducts or Crossings

- Casement

Ducts may contain high voltage cables. Please check with Thames Water.

- Conduit Bridge
- Subway
- Tunnel

Notes:

1) All levels associated with the plans are to Ordnance Datum Newlyn.
2) All measurements on the plan are metric.
3) Arrows (on gravity fed sewers) or flecks (on rising mains) indicate the direction of flow.
4) Most private pipes are not shown on our plans, as in the past, this information has not been recorded.
5) 'na' or '0' on a manhole indicates that data is unavailable.
6) The text appearing alongside a sewer line indicates the internal diameter of the pipe in millimeters. Text next to a manhole indicates the manhole reference number and should not be taken as a measurement.

If you are unsure about any text or symbology, please contact Property Searches on 0800 009 4540.
