

Legend

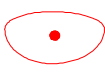

Category A trees - Trees of high quality and value such that they make a substantial existing and future contribution for an expected 40 years or more.

Category B trees - Trees of moderate quality and value such that they make a significant future contribution for an expected 20 years or more.

Category C trees - Trees of low quality and value which might be expected to remain for around 10 years or less or with stems of less than 150 mm diameter.

Category U trees - Trees of low quality and value which are considered to have little or no potential due to disease or defects.

Number suffixes relate to the subcategories 1, 2 and 3 which are intended to reflect arboricultural, landscape and cultural values respectively

Direction of the first significant branch

The root protection area is the theoretical area considered necessary to provide sufficient room for the root growth required to support the tree - activity impacting the soil should be avoided.
