Executive Summary

This report presents a ground contamination desk study and preliminary risk assessment for a proposed commercial development, including an electric substation and electric charging points, for land at Stockley Park Golf Course, Uxbridge, UB11 1AQ. It is based on a review of desk-based resources, including historical mapping and environmental database information contained in a Landmark Envirocheck report, online resources, and a site walkover.

The site comprises an open area of land surrounded by soft landscaping and mature trees. A small quantity of recycled aggregate was observed at surface during the site walkover. No visible evidence of contamination, such as clearly identifiable asbestos containing materials (ACM), stained or odorous materials were observed.

The site is in an area of historical landfill that extends off to the north beneath the Stockley Park Golf Course. The landfill dates from between 1950s to 1992 and was permitted to receive inert, industrial, commercial, household and special waste. No evidence of 'waste' materials was noted at surface. It is likely that restoration soils were placed above any waste following completion of landfilling in 1992.

The ground conditions are anticipated to comprise the Lynch Hill Gravel Member (Principal aquifer) overlying the London Clay Formation (Unproductive strata), anticipated beneath the landfill materials. The depth and composition of the landfill are unknown.

Considering the form of proposed development the risks from ground contamination are low. A land contamination ground investigation is not required for the proposed development.

It is recommended that a watching brief for ground contamination is undertaken at the construction stage to inform occupational health and safety and testing to confirm classification of soils for waste disposal (if required).

An inspection of near surface landscaping soils is recommended to confirm physical suitability during construction, e.g. no inclusions of construction rubble or other unsuitable anthropogenic fragments, in accordance with the landscape specification.

1.0 Introduction

1.1 Background

- 1.1.1 Enzygo Limited has been commissioned by Tesla Motors Limited to prepare a ground contamination preliminary risk assessment report in support of the planning application to the London Borough of Hillingdon Council.
- 1.1.2 The proposed development is for electric vehicle charging points, parking bays and an electrical substation.
- 1.1.3 The objectives of this report are to:
- Identify and assess relevant information sources concerning historical site uses, environmental setting, site sensitivity, ground conditions and the potential for ground contamination to be present at the site and in the surrounding area.
 - Undertake a preliminary risk assessment based on a conceptual site model, considering potential risks to sensitive environmental and human health receptors associated with the construction and operational stages of the proposed development.
 - Identify the need for further assessment, such as ground investigation, where potential unacceptable risks are identified.
- 1.1.4 The report has been prepared in general accordance with the National Planning Policy Framework¹, BS10175:2011+A2:2017 Investigation of potentially contaminated sites², and Land Contamination Risk Management (LCRM) guidance³.
- 1.1.5 The report does not present a survey or assessment of the location, condition, or liabilities associated with any hazardous materials in the building fabric, such as asbestos containing materials or lead.

1.2 Information Sources

- 1.2.1 The following information sources have been used in the preparation of this report:
- Envirocheck Report ⁴, including environmental database report and historical mapping (included in Appendix 1).
 - Environmental site walkover survey undertaken during February 2026.
 - British Geological Survey (BGS) GeoIndex website⁵.
 - London Borough of Hillingdon Planning Portal⁶.
 - Zetica UXO risk maps website⁷.

2.0 Site Setting

2.1 Site Location

2.1.1 The site is located off the London Loop (pedestrian footpath) to the south of Stockley Park Golf Course, Uxbridge, UB11 1AQ. The centre of the site is located at National Grid Reference TQ 08169 80469.

2.1.2 The site location is shown in Figure 1.

Figure 1 Study area (Google Earth aerial image dated 12/03/2026)

2.1.3 The site is approximately 0.27 hectares and comprises an open area surrounded by soft landscaping and mature trees. It is approximately 32m (north to south) by 100m (east to west).

2.1.4 The elevation of the site varies, the highest elevation is in the northeast at 40m above Ordnance Datum (AOD), reducing to 38m AOD in the southwest of the site.

2.2 Surrounding Area

2.2.1 Land uses surrounding the site are summarised in Table 1 below.

Table 1 Land Use Surrounding the Area

Direction	Land Use
North	Stockley Park Golf Course.
East	Public open space.
South	Public open space and commercial buildings beyond.
West	Nuffield Health Stockley Park Fitness and Wellness Gym and car parking beyond.

2.3 Site Walkover

- 2.3.1 A site walkover was undertaken by a consultant from Enzygo Ltd in February 2026. The findings of the site walkover are discussed below, with photographs in Appendix 2.
- 2.3.2 The site consisted of an open area with an unbound surface of soil and locally recycled aggregate of crushed brick and concrete, surrounded by soft landscaping. The site was bounded by mature trees to the north and south.
- 2.3.3 Access to the site was gained from Stockley Park Golf Club car park in the west of the site. The London Loop (public footpath) passes through the site from east to west, allowing for pedestrian access to the site from the west from an area of public open space.
- 2.3.4 Small piles of recycled aggregate and construction rubble was observed at surface along the southern boundary of the site.

2.4 Proposed Development

- 2.4.1 The proposed development comprises an electric substation, electric vehicle charging points, car parking and reinstatement of existing grass verges.

3.0 Site History and Industrial Land Uses

3.1 Historical Maps

3.1.1 A review of historical Ordnance Survey maps and other pertinent records contained in the Envirocheck⁴ is summarised in Table 2. Features within a 250m radius of the site boundary are described. Features further than 250m have only been included where useful to provide context and will not significantly impact the site.

Table 2 Summary of Historical Mapping

Map Edition	Historical Land Use	
	On-Site	Off-Site
1868 (1:10,560 County Series) 1875 - 1878 (1:2,500 County Series)	The site is split into three field parcels, with tree lined boundaries. A footpath runs along the eastern boundary.	The surrounding area comprises agricultural land with associated housing, ponds and infrastructure.
1895 (1:2,500 County Series) 1897 (1:10,560 County Series)	A footpath runs along the western boundary and is no longer along the eastern boundary.	A gravel pit is recorded 150m to the southeast of the site and a clay pit is noted 150m to the south of the site.
1900 & 1919 – 1920 (1:10,560 County Series) 1914 (1:2,500 County Series)	A brick works is recorded on the western edge of the site, extending 100m to the west.	A second brick works is recorded 150m to the southeast of the site. Numerous gravel pits were recorded within 500m of the site between the southeast and the southwest.
1932 & 1935 (1:10,560 County Series) 1935 (1:2,500 County Series)	No significant changes noted on the site.	A tank (gasholder) is recorded 150m to the south of the site and is associated with the brick works to the southeast. Extensive development of Hayes is from 500m north of the site.
1938 & 1948 (1:10,560 Historical Aerial Photography)	The brickworks are no longer labelled, however associated cuttings and boundary lines retained.	No significant changes noted.
1960 & 1965 (1:10,000 Ordnance Survey Plan) 1965 & 1966 (1:2,500 Ordnance Survey Plan)	The former brickworks in the west of the site (extending offsite to the west) is indicated as heathland.	A second gasholder is recorded 200m to the south of the site (listed as a depot by 1970). A spoil heap is noted 200m to the south of the site.
1970 & 1975 – 1977 (1:10,000 Ordnance Survey Plan) 1974 - 1975 (1:2,500 Ordnance Survey Plan)	A drain is indicated running through the site from northwest to southeast.	A refuse or slag heap is shown from approximately 20m to the south of the site, extending further south on land formerly occupied by a gravel pit.
1990 (1:1,250 Additional SIM's) 1989 (1:10,000 Ordnance Survey Plan)		Industrial buildings are recorded 50m to the south of the site and 100m to the west of the site.

Map Edition	Historical Land Use	
	On-Site	Off-Site
1990, 1992-1993, 1993 - 1994 (1:1,250 Large-Scale Nation Grid Data) 1999 (Historical Aerial Photography) 1999 & 2006 (1:10,000 10k Raster Mapping)	The drain is no longer shown. The surrounding land (likely including the site) has been subject to extensive earthworks (golf course and commercial park). A public footpath (London Loop) was recorded, running east to west, through the site.	Stockley Park commercial estate, including surface water ponds / lakes, is adjacent to the south and west of the site. A Golf Course is recorded immediately north and east of the site.
2025 (1:10,000 Vector Map Local)	No significant changes noted on the site.	No significant changes noted.

3.2 Industrial Land Uses

- 3.2.1 Three current industrial land uses have been recorded within 250m of the site and comprised a pharmaceutical manufacturer and distributor 98m towards the south, a used car dealership 190m towards the south and a freight forwarder 236m towards the southwest.
- 3.2.2 Five historical industrial land uses have been recorded within 250m of the site, recorded between 90m and 236m towards the south and southwest and includes cladding suppliers and installers, dry cleaners, and gas companies.
- 3.2.3 No fuel stations were recorded within 1000m of the site.

3.3 Permits

- 3.3.1 No permitted discharges to controlled waters were recorded within 250m of the site. The closest is located 344m to the south of the site at Glaxo Labs Ltd, associated with the trade discharges to freshwater river/stream from 1976 to 1991.

3.4 Pollution Incidents

- 3.4.1 No pollution incidents were recorded within 250m radius of the site.
- 3.4.2 The closest pollutant incident was noted approximately 452m to the west of the site associated with unknown sewage from Stockley Park in 1998, classified as a category 3 minor impact. A further eighteen pollution incidents associated with oil, unknown substances and unknown sewage were recorded within a radius of between 472m and 929m of the site.

3.5 Waste and Landfill

- 3.5.1 One historical landfill was recorded on the site. The licence for the landfill was held by Stockley Park Consortium Limited and allowed the landfill of inert, industrial, commercial, household and special waste. The first input was recorded in 1950; the final input was recorded in 1992. The landfill area extends to cover a much larger area to the north occupied by the Stockley Park Golf Course (which was first shown on the 1993 OS map).
- 3.5.2 An area identified as potentially infilled land, associated with the former brickworks (1920s to 1930s), was recorded in the west of the site. Historical mapping indicated potential infill may have occurred prior to the 1970s the nature of the filled ground is unknown. A further three areas of potentially infilled land were recorded within 250m of the site; recorded 30m towards the east, 152m towards the south and 195m towards the southwest, associated with potential infill to brickworks and gravel pits. The nature of the fill is unknown.

- 3.5.3 One registered landfill site was recorded within 250m of the site; located 235m towards the northwest. The licence for the landfill is held by Stockley Park Consortium Limited and is permitted to accept various types of waste. The license was granted in 1985.

3.6 Unexploded Ordnance

- 3.6.1 Zetica⁷ indicates the site lies in an area with a low bomb risk, based on a high-level assessment of regional World War Two (WWII) bomb density. No strategic targets for aerial bombing or other points of note were recorded within 500m of the site.
- 3.6.2 The site comprised open land (previously part of a brick works) during WWII. The site has been subject to landfilling (alongside the golf course to the north) prior to 1992.

3.7 Local Authority Planning Records

- 3.7.1 No previous planning application were present on-site⁶. Nearby historical applications were present in all directions of the site associated with recent commercial and industrial planning applications. No information relevant to ground contamination or ground investigation records were included.

4.0 Environmental Setting

4.1 Ground Conditions

4.1.1 The British Geological Survey (BGS)⁵ indicates that the site is underlain by the following geological sequence.

Table 3 Geological Sequence

Geological	Type	Descriptions	Aquifer Classification	Permeability
Artificial Ground	Historical Landfill	Unknown	N/A	Unknown
Superficial	Lynch Hill Gravel Member	Sand and gravel	Principal	High to Very High
Bedrock	London Clay Formation	Clay, silt and sand	Unproductive	Very Low to Low

4.1.2 No BGS boreholes are available within 250m of the site. Infilled artificial ground was recorded on the site (associated with the historical landfill (1950s to 1992)).

4.1.3 The nearest publicly available borehole record is approximately 300m to the south of the site, dating from 1992. The top of the London Clay was recorded at a depth of 14.5m below ground level (bgl). The overlying Lynch Hill Gravels were described as 'GRAVEL with some clay'.

4.1.4 The thickness of the superficial deposits beneath the landfill materials on site is unknown.

4.2 Soil Geochemistry

4.2.1 The BGS estimates of the background concentrations of potentially harmful elements in topsoil, based on rural topsoil data and soil-equivalent concentration from stream sediment data are summarised in Table 4.

Table 4 Soil Geochemistry

Determinands	Concentration (mg/kg)
Arsenic	14.1 – 18.9
Cadmium	1.2 – 2.9
Copper	97.6 - 248
Nickel	31.9 – 40.1
Lead	242 - 402

4.3 Hydrogeology

4.3.1 The site is underlain by the Lynch Hill Gravel Member which is classified as a Principal aquifer.

4.3.2 The London Clay Formation underlies the superficial geology beneath the site. It is designated as unproductive strata, defined as rock layers or drift with low permeability that have negligible significance for water supply or river base flow.

4.3.3 The groundwater vulnerability at the site is medium.

4.3.4 The site is not located within a Source Protection Zone.

- 4.3.5 Two groundwater abstractions are located within 250m of the site. The closest is located 236m towards the southeast and is operated by Stockley Park Estates Company Limited. The groundwater is used for spray irrigation. The permit started on 15th July 2016.

4.4 Hydrology

- 4.4.1 No surface water features are present on the site. The nearest off-site surface water feature is a pond 90m towards the southeast of the site in Stockley Park commercial estate.
- 4.4.2 The site is within the Water Framework Directive (WFD) surface water body catchment of the river Pinn.
- 4.4.3 The site is not within an area of potential flood risk from surface water flooding. An assessment of flood risk is beyond the remit of this report, and no further assessment is provided.
- 4.4.4 There are no surface water abstractions within 2000m of the site.

4.5 Mining and Ground Workings

- 4.5.1 The site is located not located within an area of know mining.
- 4.5.2 The site is located within an area of potentially infilled land (see Section 3.5).

4.6 Radon Potential

- 4.6.1 The site is not in a radon affected area. Less than 1% of homes are estimated to be at or above the action level (200Bq/m³). The published guidance for England indicates that no radon protection measures are necessary in the construction of new dwellings or extensions for this classification.

4.7 Natural Ground Subsidence Hazards

- 4.7.1 BGS information presented within the Groundsure report has identified the following natural ground subsidence hazards, as summarised in Table 5.

Table 5 Natural ground subsidence hazards

Hazard	Hazard rating (Groundsure)	Commentary
Swelling / Shrinking Clay	Negligible	Ground conditions listed as non-plastic (Lynch Hill Gravel Member).
Running Sand	Very Low	Running sands unlikely (Lynch Hill Gravel Member and London Clay Formation).
Compressible Ground	Moderate	Moderate hazard rating associated with landfill. Not thought to occur in Lynch Hill Gravel Member and London Clay Formation.
Collapsible Ground	Very Low	Not thought to be present (Lynch Hill Gravel Member and London Clay Formation).
Landslide	Very Low	Slope instability problems not likely to occur.
Ground Dissolution	Negligible	Soluble rocks and dissolution features are not thought to be present.

4.8 Sensitive Land Uses

- 4.8.1 There are no Sites of Special Scientific Interest (SSSI), conservation or special protection areas, nature reserves or other designated sites within 250m of the site. The site is not within a SSSI Impact Risk Zone.
- 4.8.2 The site is located within a surface water Nitrate Vulnerable Zone for the Colne and Guc.
- 4.8.3 The site is located within an adopted green belt for the London Borough of Hillingdon.
- 4.8.4 No listed buildings are located within 2000m of the site.

5.0 Preliminary Risk Assessment

5.1 Risk Classification Methodology

- 5.1.1 The method of contamination risk evaluation to human health and environmental receptors has been undertaken in accordance with national guidance³, considering the available construction and operational details of the proposed development.
- 5.1.2 The risk evaluation considers the magnitude of the potential severity of the hazard and the probability of occurrence. The risk characterisation has been assessed based on the qualitative method of interpretation set out in CIRIA C552⁸. Further details are provided in Appendix 3.

5.2 Potential Sources

- 5.2.1 Potential onsite and offsite sources of contamination have been identified as described in Table 6.

Table 6 Potential Sources of Contamination

Ref	Source	Potential contaminants of concern	Comments
On-site			
S1	Historical landfill (prior to 1992)	Metals and metalloids, polycyclic aromatic hydrocarbons and total petroleum hydrocarbons (PAH and TPH), asbestos Ground gases	The site is in the south of an historical landfill (extending beneath the Stockley Park Golf Course to the north). The landfill dates from between 1950s to 1992 and permitted to receive inert, industrial, commercial, household and special waste. Infilled land (in the west of site) may also be associated with former brickworks (filled prior to 1970s). No evidence of 'waste' materials was noted at surface. It is likely that soils were placed above waste as part of restoration following completion of landfilling in 1992. The depth and composition of the landfill material / Made Ground at the site is unknown.
S2	Recycled aggregate / construction rubble	Metals and metalloids, PAH, TPH and asbestos	A small quantity of recycled aggregate was observed at surface during the site walkover. A small pile of construction rubble was noted in the south of the site. No visible evidence of contamination, such as clearly identifiable asbestos containing materials (ACM), stained or odorous materials were observed.
Off-site			
S3	Off-site landfill or infilled ground (brickworks and gravel pits)	Metals and metalloids, PAH and TPH Ground gases	Historical landfill extended offsite to the north. Various filling and groundworks occurred in the vicinity of the site associated with the Stockley Park Golf Course (to the north) and commercial estate to the south. Off-site sources may impact groundwater quality and be potential source of ground gases which could migrate beneath the site.

⁸ CIRIA DETR, C552: Contaminated land risk assessment, a guide to good practice, 2001

- 5.2.2 There is a potential for ground contamination to be present on the site associated with historical landfill activities (prior to 1992), which extend offsite to the north.
- 5.2.3 The area surrounding the site is public open space towards the east, an active golf course towards the north, car parking towards the east and a gym towards the south, with mature trees and hedgerows around the perimeter. No significant industrial land uses have been identified.

5.3 Potential Receptors

- 5.3.1 The following potential receptors have been identified associated with the proposed development at the site:
- R1 – Construction workers and site visitors.
 - R2 – Site neighbours during construction. The site is surrounded by public open space towards the east, an active golf course towards the north, car parking towards the east and a gym towards the south, with mature trees and hedgerows around the perimeter.
 - R3 – Future site users of the charging station (general public) and employees.
 - R4 – Groundwater in the Principal Aquifer (Lynch Hill Gravel Member) beneath the site.
 - R5 – Building materials and services, including potable water supply pipes.
 - R6 – Planting in areas of soft landscaping.
- 5.3.2 No nearby surface water receptors were in the vicinity of the site. The closest water feature was 90m southeast of the site comprising an ornamental pond.
- 5.3.3 No enclosed spaces are to be constructed at the site as part of the proposed development. The electrical substation is required to incorporate high levels of natural ventilation in accordance with relevant health and safety and design standards. As such there is no receptor for ingress of ground gases and/or vapours into enclosed spaces (indoor air).

5.4 Potential Pathways

- 5.4.1 The following potential pathways may be present during construction and operation of the development:
- P1 – Human health exposure by ingestion of soil and/or dust, dermal contact of soil and/or dust and inhalation of dust and/or fibres.
 - P2 – Migration of ground gases and/or vapour. Limited to outdoor air, no indoor enclosed spaces proposed.
 - P3 – Infiltration and leaching of contaminants from the soil into groundwater.
 - P4 – Lateral migration of contamination in the aquifer (dissolved and free phases).
 - P5 – Creation of preferential pathways during construction for migration of mobile contaminants.
 - P6 – Direct contact with construction materials and services.
 - P7 – Plant uptake of phytotoxic contaminants.

5.5 Initial Conceptual Site Model

- 5.5.1 Based on the potential sources, pathways and receptors identified, an initial conceptual site model (CSM) for the site has been produced, which includes a risk assessment of the potential contaminant linkages (PCL), as presented in Table 7.

Table 7 Initial Conceptual Site Model and Preliminary Risk Assessment

Potential contaminant linkage (PCL)			Risk estimation			Comments
Source	Pathway	Receptor	Probability	Severity	Risk	
Human Health						
S1 –Historical landfill S2 – Recycled aggregate	P1 – Ingestion, inhalation and dermal contact with soil and dust	R1 – Construction workers and site visitors	Low	Medium	Moderate to Low	PCL1 Groundworkers will come into direct contact with soil during construction, although this will be limited to shallow soils considering the form of development (external pavements and small electrical substation). The site comprises an historical landfill (unknown composition and thickness), and likely restoration soil at near surface. Risks to construction workers can be mitigated through good construction measures and controls, such as dust prevention and appropriate personal protective equipment (PPE). Inspection and testing of soils is recommended at the construction stage to inform occupational health and safety and classification of soils for waste disposal (if required).
	P1 – Fugitive dust	R2 – Site neighbours	Unlikely	Minor	Low	PCL2 The site is surrounded by public open space towards the east, an active golf course towards the north, car parking towards the east and a gym towards the south, with mature trees and hedgerows around the perimeter. The scale of the development is limited. Adequate mitigation to be provided to prevent fugitive dust emissions during excavations and construction.
	P1 – Ingestion, inhalation and dermal contact with soil and dust	R3 – Future site users	Unlikely	Medium	Low	PCL3 The proposed development comprises hard standing (car parking bays and access road), with small grass verges (reinstatement of existing grassland) adjacent to the electrical vehicle charging bays. It is unlikely that future site users would encounter soil. It is recommended that an inspection of near surface soils is undertaken to confirm physical suitability, e.g. no inclusions of construction rubble or other unsuitable anthropogenic fragments, in accordance with the landscape specification.
S1 –Historical landfill S3 – Off-site landfill	P2 – Migration, ingress and inhalation of ground gases or vapours		Unlikely	Medium	Low	PCL4 The proposed development does not include any enclosed spaces where ground gases may accumulate. No further action required.
Controlled waters						
S1 –Historical Landfill S3 – Off-site landfill	P3 – Infiltration P4 – Lateral migration in aquifer	R4 – Groundwater	Unlikely	Medium	Low	PCL5 The site forms a small part of a wider historical landfill site. The proposed development will include charging points and electrical substation. It is anticipated that excavations for foundations and utilities will be shallow and limited to the upper Made Ground. No interaction is anticipated with the underlying aquifer.
Building materials						
S1 –Historical landfill	P6 – Direct contact	R6 -Building materials	Low	Mild	Low	PCL6 Below ground concrete will come into direct contact with Made Ground and should be specified based on testing of aggressive ground conditions.
Plants						

Potential contaminant linkage (PCL)			Risk estimation			Comments
Source	Pathway	Receptor	Probability	Severity	Risk	
S1 –Historical landfill	P7 – Plant uptake	R7 - Planting	Unlikely	Minor	Very low	PCL8 No evidence of adverse impacts to plants was noted during the walkover. Consideration of phytotoxic contaminants in soil should be made in areas of soft landscaping.

6.0 Conclusions and Recommendations

6.1 Conclusions

- 6.1.1 The proposed development is for an electric substation, electric charging points and car parking.
- 6.1.2 The site comprises an open area of land surrounded by soft landscaping and mature trees. A small quantity of recycled aggregate was observed at surface during the site walkover. No visible evidence of contamination, such as clearly identifiable asbestos containing materials (ACM), stained or odorous materials were observed.
- 6.1.3 The site is in an area of historical landfill that extends off to the north beneath the Stockley Park Golf Course. The landfill dates from between 1950s to 1992 and permitted to receive inert, industrial, commercial, household and special waste. Infilled land (in the west of site) may also be associated with former brickworks (filled prior to 1970s). No evidence of 'waste' materials was noted at surface. It is likely that soils were placed above waste as part of restoration following completion of landfilling in 1992.
- 6.1.4 The ground conditions are anticipated to comprise the Lynch Hill Gravel Member (Principal aquifer) overlying the London Clay Formation (Unproductive strata), beneath the landfill materials. The depth and composition of the landfill are unknown.
- 6.1.5 Considering the form of proposed development, the conceptual site model and preliminary risk assessment has identified that the risks from ground contamination are low.

6.2 Recommendations

- 6.2.1 A land contamination ground investigation is not required for the proposed development. It is recommended that a watching brief for ground contamination is undertaken at the construction stage to inform occupational health and safety and testing to confirm classification of soils for waste disposal (if required).
- 6.2.2 It is recommended that an inspection of near surface landscaping soils is undertaken to confirm physical suitability during construction, e.g. no inclusions of construction rubble or other unsuitable anthropogenic fragments, in accordance with the landscape specification.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Natural England Copyright Notice

Site of Special Scientific Interest, National Nature Reserve, Ramsar, Special Protection Area, Special Conservation Area, Marine Nature Reserve data (derived from Ordnance Survey 1:10000 raster) is provided by, and used with the permission of, Natural England who retain the copyright and Intellectual Property Rights for the data.

Scottish Natural Heritage Copyright

Contains SNH information licensed under the Open Government Licence v3.0.

Ove Arup Copyright Notice

The Mining Instability data was obtained on licence from Ove Arup & Partners Limited (for further information, contact mining.review@arup.com). No reproduction or further use of such Data is to be made without the prior written consent of Ove Arup & Partners Limited. The supplied Mining Instability data is derived from publicly available records and other third party sources and neither Ove Arup & Partners nor Landmark warrant the accuracy or completeness of such information or data.

Stantec Copyright Notice

The cavity data presented has been extracted from the PBA (now Stantec UK Ltd) enhanced version of the original DEFRA national cavity databases. Stantec UK Ltd retain the copyright & intellectual property rights in the data. Whilst all reasonable efforts are made to check that the information contained in the cavity databases is accurate we do not warrant that the data is complete or error free. The information is based upon our own researches and those collated from a number of external sources and is continually being augmented and updated by Stantec UK Ltd. In no event shall Stantec UK Ltd or Landmark be liable for any loss or damage including, without limitation, indirect or consequential loss or damage arising from the use of this data.

Radon Potential dataset Copyright Notice

Information supplied from a joint dataset compiled by The British Geological Survey and Public Health England. The probability result is only valid for properties above ground. All basement and cellar areas are considered to be at additional risk from high radon levels. If an underground room such as a cellar or basement makes up part of the living or working accommodation, the property should be tested regardless of Radon Affected Area status.

Index Map

For ease of identification, your site and buffer have been split into Slices, Segments and Quadrants. These are illustrated on the Index Map opposite and explained further below.

Slice

Each slice represents a 1:10,000 plot area (2.7km x 2.7km) for your site and buffer. A large site and buffer may be made up of several slices (represented by a red outline), that are referenced by letters of the alphabet, starting from the bottom left corner of the slice "grid". This grid does not relate to National Grid lines but is designed to give best fit over the site and buffer.

Segment

A segment represents a 1:2,500 plot area. Segments that have plot files associated with them are shown in dark green, others in light blue. These are numbered from the bottom left hand corner within each slice.

Quadrant

A quadrant is a quarter of a segment. These are labelled as NW, NE, SW, SE and are referenced in the datasheet to allow features to be quickly located on plots. Therefore a feature that has a quadrant reference of A7NW will be in Slice A, Segment 7 and the NW Quadrant.

A selection of organisations who provide data within this report:

Envirocheck reports are compiled from 136 different sources of data.
